It is quite clear that let the facts speak for themselves is more convincing than any word, therefore, we have prepared free demo in this website for our customers to have a taste of the FCP_FMG_AD-7.6 test torrent compiled by our company. You will understand the reason why we are so confident to say that the FCP_FMG_AD-7.6 exam torrent compiled by our company is the top-notch FCP_FMG_AD-7.6 Exam Torrent for you to prepare for the exam. Just like the old saying goes: "Facts are stronger than arguments." You can choose to download our free demo at any time as you like, you are always welcome to have a try, and we trust that our FCP_FMG_AD-7.6 exam materials will never let you down.

Fortinet FCP_FMG_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	Advanced Configuration: This section of the exam measures the skills of Network Security Engineers and includes knowledge of high availability (HA), FortiGuard service configuration, and global database ADOM settings. These advanced functions help strengthen system reliability and streamline management at a larger scale.
Topic 3	Troubleshooting

100% Pass FCP_FMG_AD-7.6 - FCP - FortiManager 7.6 Administrator Updated Brain Dump Free

No matter where you are, we will ensure that you can use our FCP_FMG_AD-7.6 guide quiz at any time. We have provided you with three versions for your choice: the PDF, Software and APP online. At home, you can use the Software. Outside, you can use the APP version of our FCP_FMG_AD-7.6 Study Materials. If you like the aroma of paper, you can choose the PDF version. You can carry the printed material with you and write your own notes on it. If you want to know more about them, just free download the demos of our FCP_FMG_AD-7.6 exam questions.

Fortinet FCP - FortiManager 7.6 Administrator Sample Questions (Q38-Q43):

NEW QUESTION # 38

A service provider administrator has assigned a global policy package to a managed customer ADOM named My_ADOM. The customer administrator has access only to My_ADOM.

How can the customer administrator edit the global header policy of the global policy package?

- A. The customer administrator can edit the header policy by using workspace mode on the global ADOM.
- B. The service provider administrator can unlock the global policy from the global ADOM to authorize changes to the customer administrator.
- C. The customer administrator can edit the header policy by using workflow mode on the global ADOM and My_ADOM.
- D. The customer administrator cannot edit the global header policy; only the service provider administrator can make changes from the global ADOM.

Answer: D

Explanation:

The global policy package is managed only from the global ADOM by the service provider administrator.

Customer administrators with access solely to their ADOM (My_ADOM) cannot edit the global header policy; such changes must be made by the service provider administrator in the global ADOM.

NEW QUESTION # 39

Refer to the exhibit.

FortiManager cluster settings

FortiManager

Cluster Settings

Failover Mode: Manual VRRP

Operation Mode: Standalone Primary Secondary

Peer IP and Peer SN	IP Type	Peer IP	Peer SN	Action
	IPv4	10.0.1.242	FMG-VM0A169	✕ +

Cluster ID: 1 (1-64)

Group Password:

File Quota: 4096 MB (2048-20480)

Heart Beat Interval: 10 Seconds

Failover Threshold: 30 (1-255)

VIP: 10.0.1.245

VRRP Interface: port2

Priority: 1 (1-253)

Unicast: ☐

Monitored IP	Interface	Action
10.0.1.241	port2	✕ +

Download Debug Log: [Download](#)

HA

Network

If the monitored interface for the primary FortiManager device fails, what must you do to maintain high availability (HA)?

- A. The FortiManager HA failover is transparent to administrators and does not require any additional action.
- B. Reconfigure the primary device to remove the peer IP address of the failed device from its configuration.
- C. Manually promote one of the working secondary devices to the primary role; and reboot the original primary device to remove the peer IP address of the failed device.
- D. Check the integrity database of the primary device to force a secondary device to become the new primary with all active interfaces.

Answer: A

Explanation:

In a FortiManager HA cluster configured with VRRP failover, the failover process is automatic and transparent to administrators. If the monitored interface on the primary device fails, the secondary device takes over without requiring manual intervention to maintain HA.

NEW QUESTION # 40

What is the best explanation of how FortiManager helps with mass provisioning?

- A. It uses templates to configure the same settings on many devices simultaneously.
- B. It upgrades the OS of each FortiGate device.
- C. It provides local FortiGuard Distribution Server (FDS) services to the network.
- D. It sends email alerts when new devices connect.

Answer: A

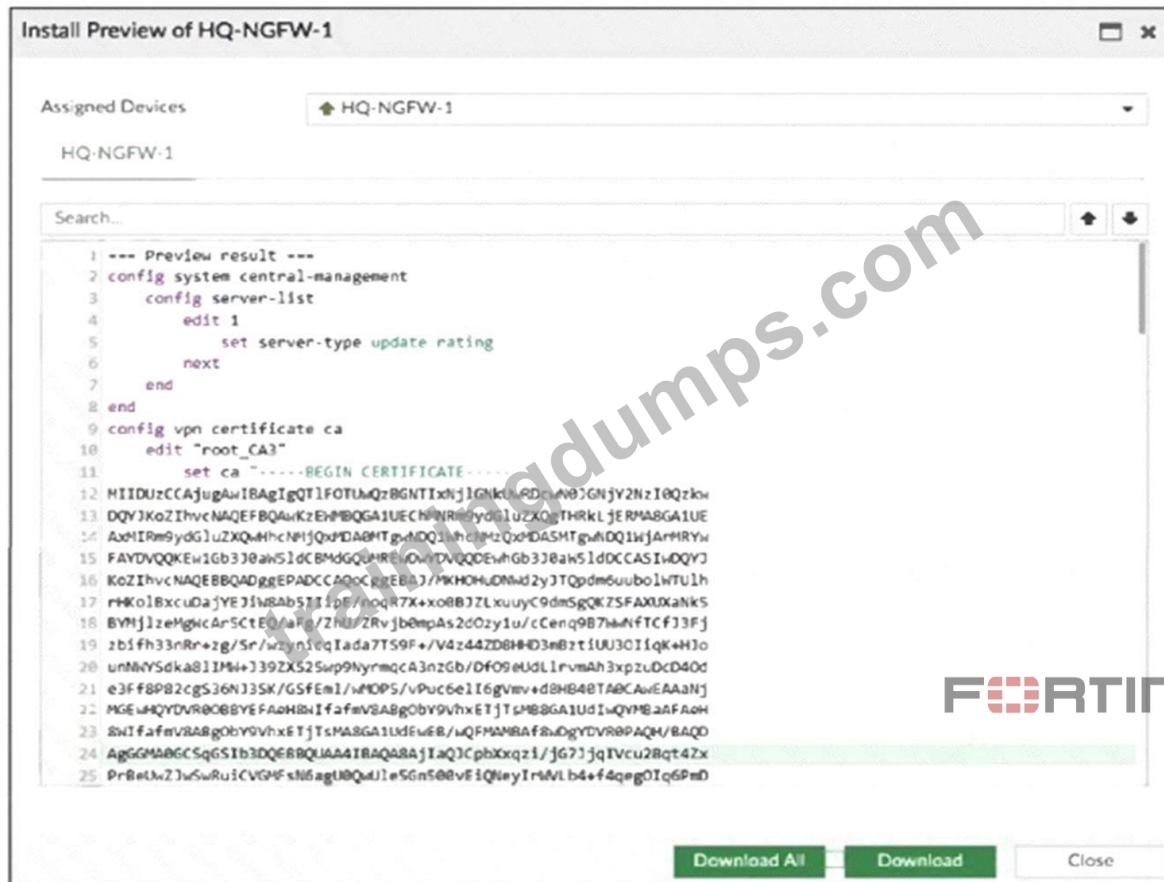

Explanation:

FortiManager helps with mass provisioning by using templates that allow administrators to configure the same settings on multiple FortiGate devices simultaneously, streamlining deployment and management.

NEW QUESTION # 41

Refer to the exhibit.

FortiManager—HQ-NGFW-1 install preview

An administrator assigned a new policy package to FortiGate HQ-NGFW-1. In the installation preview, they noticed some settings they did not modify and are unsure about the changes.

Based on the exhibit, which two things will happen if they continue with the installation? (Choose two.)

- A. FortiManager will install the CA certificate named root_CA3 to authenticate FortiGate-to-FortiManager communication protocol (FGFM) tunnel connections with FortiGate HQ-NGFW-1.
- B. FortiGate HQ-NGFW-1 can use FortiManager firmware templates to upgrade firmware and ratings.
- C. FortiGate HQ-NGFW-1 will use the root_CA3 certificate in firewall address objects or policies.
- D. FortiGate HQ-NGFW-1 can contact the FortiManager acting as FortiGuard Distribution Server (FDS) to download FortiGuard updates.

Answer: A,D

Explanation:

The configuration includes a server-list with server-type set to "update rating," which enables FortiGate HQ-NGFW-1 to contact FortiManager as a FortiGuard Distribution Server (FDS) for FortiGuard updates.

The installation includes a root_CA3 certificate, which FortiManager will install on FortiGate HQ-NGFW-1 to authenticate FGFM tunnel connections between the devices.

NEW QUESTION # 42

You want to let multiple administrators work in the same ADOM without creating configuration conflicts.

What is the best and the most effective solution to apply?

- A. Enable workflow mode, which is the only way to prevent concurrent configuration conflicts.
- B. Activate workspace mode in the ADOM settings.
- C. Configure RADIUS authentication to assign ADOM roles to each user.

- Answer: B**

Activating workspace mode in the ADOM settings allows multiple administrators to work concurrently in the same ADOM by isolating their configuration changes in separate workspaces, preventing conflicts and enabling effective collaboration.
