Fortinet FCP - Google Cloud Security 7.6 Administrator Sample Questions (Q15-Q20):

NEW QUESTION # 15

Which architecture inspection type in Google Cloud is most closely associated with Google Cloud Interconnect?

- A. East-west traffic inspection
- **B. Hybrid cloud inspection**
- C. Inbound north-south traffic inspection
- D. Outbound north-south traffic inspection

Answer: B

Explanation:

Google Cloud Interconnect connects on-premises networks with Google Cloud, enabling hybrid cloud environments. Inspection related to this connectivity focuses on hybrid cloud traffic flows.

NEW QUESTION # 16

An administrator configured an external fabric connector for Google Cloud to pull information from Google Cloud, including addresses, VM names, and subnets to create firewall policies.

When trying to create dynamic firewall addresses, the list of available instances does not populate any information from Google Cloud.

Which two issues are the most probable cause? (Choose two.)

- A. The VM instances in Google Cloud have multiple IP address assigned to them.
- **B. Google Cloud Metadata API access is disabled for Compute Engine for the FortiGate instance.**
- **C. There are no VM instances deployed in Google Cloud.**
- D. The VM instances in Google Cloud were not deployed using Google Cloud marketplace.

Answer: B,C

Explanation:

The external fabric connector relies on Google Cloud Metadata API access to retrieve instance information; if this is disabled, data won't populate.

If no VM instances exist in the project, there will be no instance data for the connector to retrieve.

NEW QUESTION # 17

You have been tasked with deploying an active-active FortiGate high-availability cluster in Google Cloud.

How can you ensure that traffic will flow symmetrically?

- A. There is no need to ensure traffic symmetry because FortiGate can effectively inspect asymmetric traffic.
- B. Google Cloud performs NAT on incoming traffic for external passthrough network load balancers. No action is needed.
- C. Enable the layer 3 unified threat management scanning feature on FortiGate.
- **D. Deploy internal passthrough network load balancers on both sides of the cluster they support symmetric hashing.**

Answer: D

NEW QUESTION # 18

An administrator wants to use the FortiGate automation stitch feature to quarantine compromised hosts.

Which native Google Cloud service should the administrator integrate with FortiGate to achieve this?

- A. Google Cloud IAM
- B. Google Cloud Interconnect
- C. Google Cloud App_Engine
- **D. Google Cloud Run functions**

Answer: D

Explanation:

Google Cloud Run allows you to run serverless containerized functions that can be triggered by FortiGate automation stitches to perform actions such as quarantining compromised hosts. It is the native service best suited for automating responses in cloud environments.

NEW QUESTION # 19

You are tasked with deploying a load balancer in Google Cloud that does not terminate sessions arriving from outside the VPC and that forwards traffic to the organization's internal web servers.

Which load balancer type should you deploy?

- **A. External passthrough load balancer**
- B. Internal passthrough load balancer
- C. Proxy network load balancer
- D. External application load balancer

Answer: A

Explanation:

An external passthrough load balancer forwards traffic without terminating sessions, preserving the original client connection, which is ideal for forwarding traffic directly to internal web servers.
