Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q33-Q38):

NEW QUESTION # 33

In the context of Azure Route Server, what is a primary function of the route server subnet?

- A. Serving as the hub for the exchange of routing information
- B. Hosting virtual machines for routing propagation purposes
- C. Providing DNS resolution for on-premises networks

- D. Acting as a dedicated subnet to host network virtual appliances (NVAs) with routing propagation capabilities

Answer: A

Explanation:

The route server subnet in Azure is a dedicated subnet that hosts the Azure Route Server, which functions as the hub for dynamic routing information exchange between Azure virtual networks and BGP-enabled network virtual appliances (NVAs) or on-premises routers. It enables seamless and centralized route propagation.

NEW QUESTION # 34

A Linux server was deployed in a protected subnet with a dynamic IP address. A FortiGate VM in the internal subnet provides traffic filtering to it, and you must implement a firewall policy using the IP address of the Linux server.

Which feature could help integrate FortiGate using Linux server tags?

- A. Microsoft Entra ID
- B. Targets Management
- C. Service Fabric Cluster
- D. Software-defined network (SDN) connector

Answer: D

Explanation:

The Software-defined network (SDN) connector allows FortiGate to dynamically pull metadata such as tags, IP addresses, and resource groups from Azure resources. This enables automatic policy updates based on dynamic IP changes, such as those of a Linux server in a protected subnet.

NEW QUESTION # 35

Refer to the exhibit.

Your organization is planning the implementation of a complex hub-to-spoke solution to meet automated large-scale branch connectivity with multiple regions, offering a diverse range of connectivity options.

Which Azure networking service can deliver a solution?

- A. Azure SD-WAN
- B. Azure Firewall Manager
- C. Azure VPN Gateway
- D. Azure Virtual WAN

Answer: D

Explanation:

Azure Virtual WAN is designed for large-scale, automated, and global branch connectivity, supporting hub-and-spoke architectures across multiple regions. It enables centralized routing, hub-to-hub connectivity, and integrates with VPN, ExpressRoute, and SD-WAN solutions, making it ideal for complex, multi-region deployments as shown in the diagram.

NEW QUESTION # 36

You want to take advantage of Azure availability zones for your cloud-based Fortinet deployment. Which two benefits do Azure availability zones provide? (Choose two.)

- A. Protect applications and data through high availability with fault isolation and redundancy
- B. Enhanced protection for application and data in a single Azure region
- C. Improve database performance and reliability
- D. Protect applications and data across multiple Azure regions

Answer: A,B

Explanation:

Enhanced protection for application and data in a single Azure region - Availability Zones provide physical separation of infrastructure within a single Azure region, protecting against datacenter-level failures.

Protect applications and data through high availability with fault isolation and redundancy - They offer fault isolation and redundancy, enabling high availability for applications and services by distributing them across multiple zones within the same region.

NEW QUESTION # 37

Refer to the exhibit.

In an expanding corporation, the different branches share resources connecting to Azure through Azure VPN Gateway and ExpressRoute Gateway.

Which Azure solution can you implement to simplify and centralize the seamless sharing of the dynamic routing between FortiGate VMs and branches?

- A. Azure Traffic Manager
- **B. Azure Route Server**
- C. Azure Virtual WAN
- D. Azure Virtual Hub

Answer: B

Explanation:

Azure Route Server simplifies dynamic routing by allowing your FortiGate VMs to exchange BGP routes directly with Azure's networking fabric. This eliminates the need to manually update route tables and enables seamless, centralized communication between on-premises branches and Azure resources through both VPN Gateway and ExpressRoute Gateway.
