After registration, collectors maintain continuous communication with the Supervisor to ensure proper event processing, system health monitoring, and failover handling. The two key reasons collectors communicate with the Supervisor are:

If a worker node fails, the collector can temporarily store event logs and then forward them to the Supervisor.* This ensures event continuity even during infrastructure issues.

The collector sends health reports to the Supervisor, including resource usage, connectivity status, and operational logs.* This helps FortiSIEM track collector uptime and performance.
