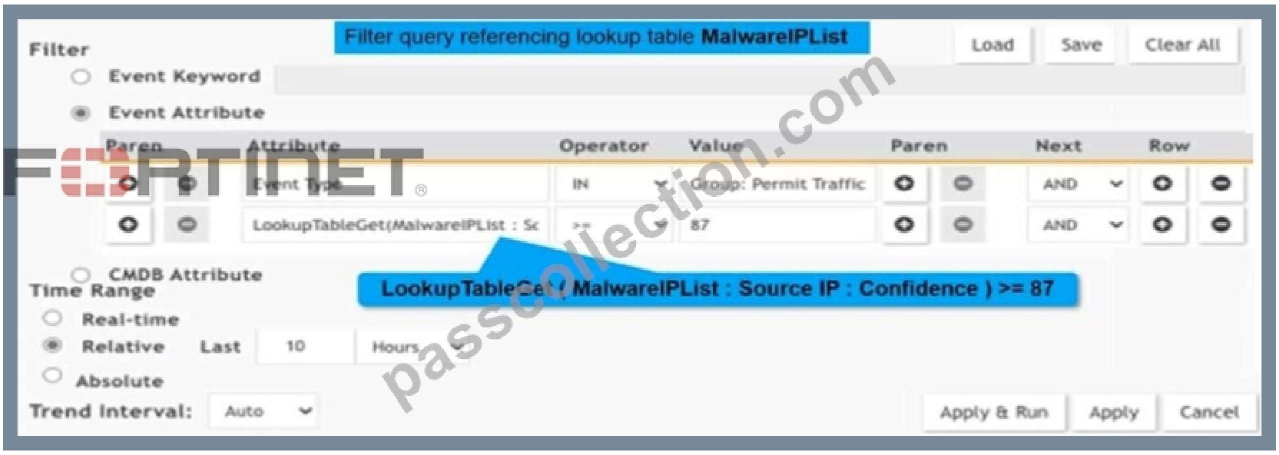
NEW QUESTION # 19
Refer to the exhibit.



Filter query referencing lookup table **MalwareIPList**

Filter
○ Event Keyword
● Event Attribute

Paren		Attribute	Operator	Value	Paren		Next	Row	
⊕	⊖	Event Type	IN	Group: Permit Traffic	⊕	⊖	AND	⊕	⊖
⊕	⊖	LookupTableGet(MalwareIPList : Sc	>=	87	⊕	⊖	AND	⊕	⊖

LookupTableGet(MalwareIPList : Source IP : Confidence) >= 87

○ CMDB Attribute

Time Range
○ Real-time
● Relative Last 10 Hours
○ Absolute

Trend Interval: Auto

Consider a custom lookup table MalwareIPList. An analyst constructed an analytic query to reference the MalwareIPList lookup table.

What is the outcome of the analytic query?

- A. The IP address from permitted traffic with a confidence score of 98 is displayed.
- B. The analyst receives an error because the LookupTableGet function can be used only in display filters to enrich data.
- C. The value for the LookupTableGet function in the analytic search can be either true or false.
- D. The permitted traffic IP address from the Phishing category is displayed.

Answer: B

Explanation:
The LookupTableGet function is designed to enrich event data by referencing a lookup table. However, it cannot be used directly in analytic queries for filtering data before processing. Instead, it is meant to be applied as a display filter to enhance results after retrieval.
In the given query, LookupTableGet(MalwareIPList : Source IP : Confidence) >= 87 is being used in a filter condition, which leads to an error because the function is not valid in this context. It should be applied after the data is retrieved, not as a pre-processing filter.

NEW QUESTION # 20

- B. Deploy a multi-tenancy SOC solution.

- D. Frequently change SOC vendors for the best deals.

```

The exhibit shows the output of an SQL command that an administrator ran to view the natural_id value, after logging into the Postgres database.
What does the natural_id value identify?

- A. An agent
- B. The collector
- C. The worker
- D. The supervisor
