

FCSS_EFW_AD-7.6 Valid Exam Registration & FCSS_EFW_AD-7.6 Certified Questions

The exam questions and answers of general Fortinet certification exams are produced by the Fortinet specialist professional experience. PDFDumps just have these Fortinet experts to provide you with practice questions and answers of the exam to help you pass the exam successfully. Our PDFDumps's practice questions and answers have 100% accuracy. Purchasing products of PDFDumps you can easily obtain Fortinet certification and so that you will have a very great improvement in FCSS_EFW_AD-7.6 area.

With the qualification certificate, you are qualified to do this professional job. Therefore, getting the test FCSS_EFW_AD-7.6 certification is of vital importance to our future employment. And the FCSS_EFW_AD-7.6 study tool can provide a good learning platform for users who want to get the test FCSS_EFW_AD-7.6 certification in a short time. If you can choose to trust us, I believe you will have a good experience when you use the FCSS_EFW_AD-7.6 study guide, and you can pass the exam and get a good grade in the test FCSS_EFW_AD-7.6 certification.

**Top FCSS_EFW_AD-7.6 Valid Exam Registration | Efficient Fortinet
FCSS_EFW_AD-7.6: FCSS - Enterprise Firewall 7.6 Administrator 100%
Pass**

You will need to pass the Fortinet FCSS_EFW_AD-7.6 exam to achieve the FCSS - Enterprise Firewall 7.6 Administrator (FCSS_EFW_AD-7.6) certification. Due to extremely high competition, passing the FCSS - Enterprise Firewall 7.6 Administrator (FCSS_EFW_AD-7.6) exam is not easy; however, possible. You can use PDFDumps products to pass the FCSS - Enterprise Firewall 7.6 Administrator (FCSS_EFW_AD-7.6) exam on the first attempt. The FCSS - Enterprise Firewall 7.6 Administrator (FCSS_EFW_AD-7.6) practice exam gives you confidence and helps you understand the criteria of the testing authority and pass the FCSS - Enterprise Firewall 7.6 Administrator (FCSS_EFW_AD-7.6) exam on the first attempt.

Fortinet FCSS - Enterprise Firewall 7.6 Administrator Sample Questions (Q41-Q46):

NEW QUESTION # 41

An administrator is setting up an ADVPN configuration and wants to ensure that peer IDs are not exposed during VPN establishment.

Which protocol can the administrator use to enhance security?

- A. Opt for SSL VPN web mode because it does not use peer IDs at all.
- B. Stick with IKEv1 main mode because it offers better performance.
- C. Choose IKEv1 aggressive mode because it simplifies peer identification.
- **D. Use IKEv2, which encrypts peer IDs and prevents exposure.**

Answer: D

Explanation:

In ADVPN (Auto-Discovery VPN) configurations, security concerns include protecting peer IDs during VPN establishment. Peer IDs are exchanged in the IKE (Internet Key Exchange) negotiation phase, and their exposure could lead to privacy risks or targeted attacks.

IKEv2 encrypts peer IDs, making it more secure compared to IKEv1, where peer IDs can be exposed in plaintext in aggressive mode.

IKEv2 also provides better performance and flexibility while supporting dynamic tunnel establishment in ADVPN.

NEW QUESTION # 42

Refer to the exhibit, which shows a hub and spokes deployment.

An administrator is deploying several spokes, including the BGP configuration for the spokes to connect to the hub.

Which two commands allow the administrator to minimize the configuration? (Choose two.)

- A. route-reflector-client
- B. ibgp-enforce-multihop
- **C. neighbor-group**
- **D. neighbor-range**

Answer: C,D

Explanation:

neighbor-group:

This command is used to group multiple BGP neighbors with the same configuration, reducing redundant configuration.

Instead of defining individual BGP settings for each spoke, the administrator can create a neighbor-group and apply the same policies, reducing manual work.

neighbor-range:

This command allows the configuration of a range of neighbor IPs dynamically, reducing the need to manually define each spoke neighbor.

It automatically adds BGP neighbors that match a given prefix, simplifying deployment.

NEW QUESTION # 43

Refer to the exhibit, which shows a network diagram showing the addition of site 2 with an overlapping network segment to the existing VPN IPsec connection between the hub and site 1.

Which IPsec phase 2 configuration must an administrator make on the FortiGate hub to enable equal-cost multi-path (ECMP) routing when multiple remote sites connect with overlapping subnets?

- A. Set net-device to ecmp
- B. Set single-source to enable
- C. Set route-overlap to allow
- D. Set route-overlap to either use-new or use-old

Answer: D

Explanation:

When multiple remote sites connect to the same hub using overlapping subnets, FortiGate needs to determine which route should be used for traffic forwarding. The route-overlap setting in IPsec Phase 2 allows FortiGate to handle this scenario by deciding whether to keep the existing route (use-old) or replace it with a new route (use-new).

In an ECMP (Equal-Cost Multi-Path) routing setup, both routes should be retained and balanced, but FortiGate does not support ECMP directly over overlapping routes in IPsec Phase 2. Instead, an administrator must decide which connection takes precedence using route-overlap settings.

NEW QUESTION # 44

During the maintenance window, an administrator must sniff all the traffic going through a specific firewall policy, which is handled by NP6 interfaces. The output of the sniffer trace provides just a few packets.

Why is the output of sniffer trace limited?

- A. inspection-mode is set to proxy in the firewall policy.
- B. The option npudbg is not added in the diagnose sniff packet command.
- C. The traffic corresponding to the firewall policy is encrypted.
- D. auto-asic-offload is set to enable in the firewall policy,

Answer: D

Explanation:

FortiGate devices with NP6 (Network Processor 6) acceleration offload traffic directly to hardware, bypassing the CPU for improved performance. When auto-asic-offload is enabled in a firewall policy, most of the traffic does not reach the CPU, which means it won't be captured by the standard sniffer trace command.

Since NP6-accelerated traffic is handled entirely in hardware, only a small portion of initial packets (such as session setup packets or

exceptions) might be seen in the sniffer output. To capture all packets, the administrator must disable hardware offloading using:

```
config firewall policy
edit <policy_ID>
set auto-asic-offload disable
end
```

Disabling ASIC offload forces traffic to be processed by the CPU, allowing the sniffer tool to capture all packets.

NEW QUESTION # 45

A company's guest internet policy, operating in proxy mode, blocks access to Artificial Intelligence Technology sites using FortiGuard. However, a guest user accessed a page in this category using port 8443.

Which configuration changes are required for FortiGate to analyze HTTPS traffic on nonstandard ports like 8443 when full SSL inspection is active in the guest policy?

- A. Administrators can block traffic on nonstandard ports by enabling the SNI check in the SSL/SSH Inspection Profile.
- **B. In the Protocol Port Mapping section of the SSL/SSH Inspection Profile, enter 443, 8443 to analyze both standard (443) and non-standard (8443) HTTPS ports.**
- C. To analyze nonstandard ports in web filter profiles, use TLSv1.3 in the SSL/SSH Inspection Profile.
- D. Add a URL wildcard domain to the website CA certificate and use it in the SSL/SSH Inspection Profile.

Answer: B

Explanation:

When FortiGate is operating in proxy mode with full SSL inspection enabled, it inspects encrypted HTTPS traffic by default on port 443. However, some websites may use non-standard HTTPS ports (such as 8443), which FortiGate does not inspect unless explicitly configured.

To ensure that FortiGate inspects HTTPS traffic on port 8443, administrators must manually add port 8443 in the Protocol Port Mapping section of the SSL/SSH Inspection Profile. This allows FortiGate to treat HTTPS traffic on port 8443 the same as traffic on port 443, enabling proper inspection and enforcement of FortiGuard category-based web filtering.

NEW QUESTION # 46

.....

Our PDFDumps provides FCSS_EFW_AD-7.6 braindumps and training materials in PDF and software, which contains FCSS_EFW_AD-7.6 exam dumps and answers. Moreover, the content of FCSS_EFW_AD-7.6 braindumps and training materials covers largely and more reliably, and it will help you most to prepare FCSS_EFW_AD-7.6 test. If you fail the FCSS_EFW_AD-7.6 certification exam with our FCSS_EFW_AD-7.6 dumps, please don't worry. We will refund fully.

FCSS_EFW_AD-7.6 Certified Questions: https://www.pdfdumps.com/FCSS_EFW_AD-7.6-valid-exam.html

Fortinet FCSS_EFW_AD-7.6 Valid Exam Registration We support all credit cards to pay, which to a great extent protects the safe and effective money exchange and prevents us from the hassles and frauds. In addition, you will get the scores after each FCSS - Enterprise Firewall 7.6 Administrator practice test, which can make you know about the weakness and strengthen about the FCSS_EFW_AD-7.6 training pdf, then you can study purposefully, Fortinet FCSS_EFW_AD-7.6 Valid Exam Registration Chances favor the prepared mind.

Spell Check Your Document, Michael Ford, Corero Network Security, We support FCSS_EFW_AD-7.6 all credit cards to pay, which to a great extent protects the safe and effective money exchange and prevents us from the hassles and frauds.

Pass-Sure Fortinet FCSS_EFW_AD-7.6 Valid Exam Registration offer you accurate Certified Questions | FCSS - Enterprise Firewall 7.6 Administrator

In addition, you will get the scores after each FCSS - Enterprise Firewall 7.6 Administrator practice test, which can make you know about the weakness and strengthen about the FCSS_EFW_AD-7.6 Training Pdf, then you can study purposefully.

Chances favor the prepared mind, You can instantly download the FCSS - Enterprise Firewall 7.6 Administrator (FCSS_EFW_AD-7.6) real questions of the PDFDumps right after the payment, Our FCSS_EFW_AD-7.6 exam torrent is available in different versions.
