

FCSS_SASE_AD-24 PrüfungGuide, Fortinet

FCSS_SASE_AD-24 Zertifikat - FCSS - FortiSASE 24 Administrator

Außerdem sind jetzt einige Teile dieser ITZert FCSS_SASE_AD-24 Prüfungsfragen kostenlos erhältlich:
<https://drive.google.com/open?id=1Ry2DMjYDWTuzutJG8r2E9MOW2Sfr4mMO>

Die Lern Tipps zur Fortinet FCSS_SASE_AD-24 Prüfung von ITZert können ein Leuchtturm in Ihrer Karriere sein. Denn es enthält alle Prüfungsfragen und Antworten zur FCSS_SASE_AD-24 Zertifizierung. Wählen Sie ITZert und es kann Ihnen helfen, die Fortinet FCSS_SASE_AD-24 Prüfung zu bestehen. Das ist absolut eine weise Entscheidung. ITZert ist Ihr Helfer und Sie können bessere Resultate bei weniger Einsatz erzielen.

Fortinet FCSS_SASE_AD-24 Prüfungsplan:

Thema	Einzelheiten
Thema 1	SASE Deployment: This domain assesses the capabilities of Cloud Security Architects in deploying SASE solutions. It includes implementing various user onboarding methods, configuring administration settings, and applying security posture checks and compliance rules to ensure a secure environment.
Thema 2	Analytics: This domain evaluates the skills of Data Analysts in utilizing analytics within FortiSASE. It involves identifying potential security threats using traffic logs, configuring dashboards and logging settings, and analyzing reports for user traffic and security issues to enhance overall security posture.
Thema 3	SIA, SSA, and SPA" This section focuses on the skills of Security Administrators in designing security profiles for content inspection and deploying SD-WAN and Zero Trust Network Access (ZTNA) using SASE. Understanding these concepts is crucial for securing access to applications and data across the network.
Thema 4	SASE Architecture and Components: This section measures the skills of Network Security Engineers and covers the architecture and components of FortiSASE. It includes integrating FortiSASE into a hybrid network, identifying its components, and constructing deployment cases to effectively implement SASE solutions.

FCSS_SASE_AD-24 Prüfung & FCSS_SASE_AD-24 Praxisprüfung

FCSS_SASE_AD-24 ist eine der Fortinet Zertifizierungsprüfungen. IT-Fachmann mit Fortinet Zertifikat sind sehr beliebt in der IT-Branche. Deshalb legen immer mehr Leute die FCSS_SASE_AD-24 Zertifizierungsprüfung. Jedoch ist es nicht so einfach, die Fortinet FCSS_SASE_AD-24 Zertifizierungsprüfung zu bestehen. Wenn Sie nicht an den entsprechenden Kursen teilnehmen, brauchen Sie viel Zeit und Energie, sich auf die Prüfung vorzubereiten. Nun kann ITZert Ihnen viel Zeit und Energie ersparen.

Fortinet FCSS - FortiSASE 24 Administrator FCSS_SASE_AD-24 Prüfungsfragen mit Lösungen (Q52-Q57):

52. Frage

Which event log subtype captures FortiSASE SSL VPN user creation?

- A. VPN Events
- B. Endpoint Events
- C. Administrator Events
- **D. User Events**

Antwort: D

Begründung:

The event log subtype that captures FortiSASE SSL VPN user creation is User Events. This subtype is specifically designed to log activities related to user management, such as creating, modifying, or deleting user accounts. When an SSL VPN user is created, it falls under this category because it involves adding a new user to the system.

Here's why the other options are incorrect:

- * A. Endpoint Events: These logs pertain to activities related to endpoint devices, such as device registration, compliance checks, or security posture assessments. SSL VPN user creation is unrelated to endpoint events.
- * B. VPN Events: These logs capture activities related to VPN connections, such as session establishment, termination, or errors. While SSL VPN usage generates VPN events, the creation of a user account itself is not logged under this subtype.
- * D. Administrator Events: These logs track actions performed by administrators, such as configuration changes or policy updates. While an administrator might create the SSL VPN user, the specific event of user creation is categorized under User Events, not Administrator Events.

53. Frage

Which two statements describe a zero trust network access (ZTNA) private access use case? (Choose two.)

- **A. All TCP-based applications are supported.**
- B. All FortiSASE user-based deployments are supported.
- **C. The security posture of the device is secure.**
- D. Data center redundancy is offered.

Antwort: A,C

Begründung:

Zero Trust Network Access (ZTNA) private access use cases focus on providing secure and controlled access to private applications without exposing them to the public internet. The following two statements accurately describe ZTNA private access use cases:

The security posture of the device is secure (Option A):

ZTNA enforces strict access controls based on the principle of least privilege. Before granting access to private applications, ZTNA evaluates the security posture of the device (e.g., whether it is patched, compliant, and free of malware). Only devices that meet the required security standards are granted access, ensuring that the device is secure before allowing private access.

All TCP-based applications are supported (Option C):

ZTNA supports all TCP-based applications, enabling secure access to a wide range of private applications, including legacy systems and custom-built applications. This flexibility makes ZTNA suitable for organizations with diverse application environments.

Here's why the other options are incorrect:

B. All FortiSASE user-based deployments are supported: While FortiSASE supports various deployment scenarios, not all user-

based deployments are automatically compatible with ZTNA. Specific configurations and requirements must be met to enable ZTNA functionality.

D. Data center redundancy is offered: Data center redundancy is unrelated to ZTNA private access use cases. Redundancy typically pertains to infrastructure design and failover mechanisms, not access control methodologies like ZTNA.

54. Frage

Your organization is currently using FortiSASE for its cybersecurity. They have recently hired a contractor who will work from the HQ office and who needs temporary internet access in order to set up a web-based point of sale (POS) system.

What is the recommended way to provide internet access to the contractor?

- A. Use FortiClient on the endpoint to manage internet access.
- B. Configure a VPN policy on FortiSASE to provide access to the internet.
- C. Use zero trust network access (ZTNA) and tag the client as an unmanaged endpoint.
- **D. Use a proxy auto-configuration (PAC) file and provide secure web gateway (SWG) service as an explicit web proxy.**

Antwort: D

Begründung:

References:

Fortinet FCSS FortiSASE Documentation - Zero Trust Network Access (ZTNA) Use Cases FortiSASE Administration Guide - Managing Unmanaged Endpoints

55. Frage

When accessing the FortiSASE portal for the first time, an administrator must select data center locations for which three FortiSASE components? (Choose three.)

- **A. Logging**
- B. SD-WAN hub
- C. Authentication
- **D. Endpoint management**
- **E. Points of presence**

Antwort: A,D,E

Begründung:

When accessing the FortiSASE portal for the first time, an administrator must select data center locations for the following FortiSASE components:

Endpoint Management:

The data center location for endpoint management ensures that endpoint data and policies are managed and stored within the chosen geographical region.

Points of Presence (PoPs):

Points of Presence (PoPs) are the locations where FortiSASE services are delivered to users.

Selecting PoP locations ensures optimal performance and connectivity for users based on their geographical distribution.

Logging:

The data center location for logging determines where log data is stored and managed. This is crucial for compliance and regulatory requirements, as well as for efficient log analysis and reporting.

56. Frage

You are designing a new network for Company X and one of the new cybersecurity policy requirements is that all remote user endpoints must always be connected and protected. Which FortiSASE component facilitates this always-on security measure?

- **A. unified FortiClient**
- B. thin-branch SASE extension
- C. site-based deployment

- D. inline-CASB

Antwort: A

Begründung:

The unified FortiClient component of FortiSASE facilitates the always-on security measure required for ensuring that all remote user endpoints are always connected and protected.

Unified FortiClient:

FortiClient is a comprehensive endpoint security solution that integrates with FortiSASE to provide continuous protection for remote user endpoints.

It ensures that endpoints are always connected to the FortiSASE infrastructure, even when users are off the corporate network.

Always-On Security:

The unified FortiClient maintains a persistent connection to FortiSASE, enforcing security policies and protecting endpoints against threats at all times.

This ensures compliance with the cybersecurity policy requiring constant connectivity and protection for remote users.

Reference:

FortiOS 7.2 Administration Guide: Provides information on configuring and managing FortiClient for endpoint security.

FortiSASE 23.2 Documentation: Explains how FortiClient integrates with FortiSASE to deliver always-on security for remote endpoints.

57. Frage

.....

Alle Anfang ist schwer. Zögern Sie noch, wie mit der Vorbereitung der Fortinet FCSS_SASE_AD-24 Prüfung anfangen? Die Prüfungsunterlagen der Fortinet FCSS_SASE_AD-24 von uns zu kaufen wird ein notwendiger Schritt Ihrer Vorbereitung. Was wir Ihnen bieten, ist nicht nur was Sie möchten, sondern auch was für Ihre Vorbereitung der Fortinet FCSS_SASE_AD-24 Prüfung unerlässlich ist. Vielleicht haben Sie noch Hemmungen mit diesem Schritt. So können Sie zuerst die Demo der Fortinet FCSS_SASE_AD-24 Prüfungsunterlagen herunterladen. Nachdem Sie probiert haben, werden Sie bestimmt diesen Schritt machen.
