SAP P-SECAUTH-21 Certified Technology Professional - System Security Architect 1

P-SECAUTH-21 Reliable Exam Cost, P-SECAUTH-21 Test Question

Constant improvements are the inner requirement for one person. As one person you can't be satisfied with your present situation and must keep the pace of the times. You should constantly update your stocks of knowledge and practical skills. So you should attend the certificate exams such as the test [P-SECAUTH-21 Certification](#) to improve yourself and buying our P-SECAUTH-21 study materials is your optimal choice. Our P-SECAUTH-21 study materials combine the real exam's needs and the practicability of the knowledge.

SAP P-SECAUTH-21 Certification Exam covers a wide range of topics related to SAP system security architecture, including user and authorization management, secure communication, secure data storage, and secure system configuration. Candidates are expected to have a deep understanding of the SAP system landscape, including the various components and modules, as well as the security architecture principles and best practices. P-SECAUTH-21 exam consists of 80 multiple-choice questions, and candidates have three hours to complete it. To pass the exam, candidates must achieve a minimum score of 63%. Upon passing the exam, candidates receive an official SAP certification that is recognized worldwide, which can enhance their career prospects and increase their earning potential.

The SAP P-SECAUTH-21 exam consists of 80 multiple-choice questions, and candidates have 180 minutes to complete it. P-SECAUTH-21 exam is available in several languages, including English, German, Spanish, French, and Japanese. To pass the exam, candidates must score at least 65%.

SAP P-SECAUTH-21 Certification Exam is designed to validate the knowledge and skills of professionals who want to become System Security Architects. Certified Technology Professional - System Security Architect certification is offered by SAP, which is a leading provider of enterprise software solutions. P-SECAUTH-21 exam covers various aspects of system security architecture, including the design, implementation, and management of security controls in SAP systems. It is intended for individuals who have a strong understanding of SAP systems and are interested in

No study materials can boost so high efficiency and passing rate like our FCSS_SDW_AR-7.4 exam reference when preparing the test FCSS_SDW_AR-7.4 certification. Our FCSS_SDW_AR-7.4 exam practice questions provide the most reliable exam information resources and the most authorized expert verification. Our test bank includes all the possible questions and answers which may appear in the Real FCSS_SDW_AR-7.4 Exam and the quintessence and summary of the exam papers in the past. You can pass the FCSS_SDW_AR-7.4 exam with our FCSS_SDW_AR-7.4 exam questions.

Fortinet FCSS_SDW_AR-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	Advanced IPsec: Intended for security engineers, this section covers the deployment of advanced IPsec topologies for SD-WAN, including hub-and-spoke models, ADVPN configurations, and complex multi-hub or multi-region deployments. Candidates need to demonstrate expertise in securing wide-area networks using IPsec technologies.
Topic 2	SD-WAN Troubleshooting: This part assesses the troubleshooting skills of network support specialists. Candidates should be able to diagnose and resolve issues related to SD-WAN rules, session behaviors, routing inconsistencies, and ADVPN connectivity problems to maintain seamless network operations.

Topic 3	• Rules and Routing: Targeted at network engineers, this section assesses the ability to configure SD-WAN rules and routing policies. Candidates will be tested on managing traffic flow and prioritization across the SD-WAN infrastructure.
Topic 4	• Centralized Management: This domain evaluates network administrators' competence in deploying and managing SD-WAN configurations centrally using FortiManager. It includes tasks such as implementing branch configurations and utilizing overlay templates to streamline network management.
Topic 5	• Configure Performances SLAs: Designed for network administrators, this part focuses on setting up performance Service Level Agreements (SLAs) within SD-WAN environments. Candidates must show proficiency in defining criteria to monitor and maintain network performance and reliability.

It is carefully edited and reviewed by our experts. The design of the content conforms to the examination outline. Through the practice of our FCSS_SDW_AR-7.4 study materials, you can grasp the intention of the examination organization accurately. The number of its test questions is several times of the traditional problem set, which basically covers all the knowledge points to be mastered in the exam. You only need to review according to the content of our FCSS_SDW_AR-7.4 Study Materials, no need to refer to other materials. With the help of our FCSS_SDW_AR-7.4 study materials, your preparation process will be relaxed and pleasant.

Fortinet FCSS - SD-WAN 7.4 Architect Sample Questions (Q40-Q45):

NEW QUESTION # 40

Refer to the exhibit. The administrator used the SD-WAN overlay template to prepare an IPsec tunnels configuration for a hub-and-spoke SD-WAN topology. The exhibit shows the FortiManager installation preview for one FortiGate device.

Based on the exhibit, which statement best describes the configuration applied to the FortiGate device?

- A. It is a hub device. It will automatically discover the spoke devices and add them to the SD-WAN topology.
- **B. It is a hub device. It can send ADVPN shortcut offers.**
- C. It is a spoke device that establishes dynamic IPsec tunnels to the hub. It can send ADVPN shortcut requests.
- D. It is a spoke device that establishes dynamic IPsec tunnels to the hub. The local subnet range is 10.10.128.0/23.

Answer: B

NEW QUESTION # 41

Which two statements correctly describe what happens when traffic matches the implicit SD-WAN rule?
(Choose two.)

- A. The traffic is distributed, regardless of weight, through all available static routes.
- B. Traffic is load balanced using the algorithm set for the v4-ecmp-mode setting.
- **C. Traffic does not match any of the entries in the policy route table.**
- **D. The session information output displays no SD-WAN service id.**
- E. FortiGate flags the session with may_dirty and vwl_default.

Answer: C,D

Explanation:

The implicit SD-WAN rule serves as the final catch-all. Per Fortinet:

"Sessions matching the implicit SD-WAN rule do not have an SD-WAN service id, as they are not associated with any specific user-defined SD-WAN rule. Additionally, this occurs only when traffic fails to match any entry in the policy route table. This default handling guarantees connectivity while minimizing the risk of blackholed traffic." Administrators can observe this in diagnostic outputs

for troubleshooting.

NEW QUESTION # 42

An administrator is configuring SD-WAN to load balance their network traffic. Which two things should they consider when setting up SD-WAN? (Choose two.)

- A. Only the manual and best-quality strategies allow SD-WAN load balancing.
- B. SD-WAN load balancing is possible only using the best quality and lowest cost (SLA) strategies.
- C. When applicable, FortiGate load balances the traffic through all members that meet the SLA target.
- D. You can select the outbandwidth hash mode with all strategies that allow load balancing.

Answer: C,D

Explanation:

FortiGate load balances traffic across all members that meet the SLA targets, depending on the strategy used.

The outbandwidth hash mode can be selected with load-balancing strategies to distribute traffic based on flow characteristics.

NEW QUESTION # 43

Refer to the exhibit. Two hub-and-spoke groups are connected through redundant site-to-site IPsec VPNs between Hub 1 and Hub 2.

Which two configuration settings are required for the spoke A1 to establish an ADVPN shortcut with the spoke B2? (Choose two.)

- A. On hubs, auto-discovery-receiver must be enabled on the IPsec VPNs to spokes.
- B. On hubs, auto-discovery-forwarder must be enabled on the IPsec VPNs to spokes.
- C. On hubs, auto-discovery-forwarder must be enabled on the IPsec VPNs to hubs.
- D. On hubs, auto-discovery-sender must be enabled on the IPsec VPNs to spokes.

Answer: C,D

Explanation:

Summary for Basic SD-WAN + ADVPN Deployment

• Hub

- net-device: disable
- Route reflector enabled (IBGP)
- Overlay stickiness configured (policy route)
- auto-discovery-sender: enable

• Spokes

- Overlays are members of SD-WAN
- Manual SD-WAN rule ID 1 steers traffic between spokes
- Performance SLA
- net-device: enable
- auto-discovery-receiver: enable
- allowaccess: ping
- mode-cfg: enable

NEW QUESTION # 44

Refer to the exhibits.

IPsec template for Branch_IPsec_1

Template Groups: IPsec Tunnel, SD-WAN

Name: Branch_IPsec_1

Description:

Name	Type	Outgoing Interface
HUB1-VPN1	Static	\$(ISP1)

IPsec template for Branch_IPsec_2

Template Groups: IPsec Tunnel, SD-WAN

Name: Branch_IPsec_2

Description:

Name	Type	Outgoing Interface
HUB1-VPN2	Static	\$(ISP2)

Error message in FortiManager

Invalid template assignment - conflicting template assignment scope: device branch1_fgt, vdom root, _ipsec template [Branch_IPsec_1] and [Branch_IPsec_2]

The exhibits show two IPsec templates to define Branch IPsec 1 and Branch_IPsec_2. Each template defines a VPN tunnel. The error message that FortiManager displayed when the administrator tried to assign the second template to the FortiGate device is also shown.

Which statement best describes the cause of the issue?

- A. You should review the branch1_fgt configuration for configured tunnels in the rootVDM.
- B. You should use the same outgoing interface of both templates.
- **C. You can assign only one IPsec template to each FortiGate device.**
- D. You can assign only one template with a tunnel type of static to each FortiGate device.

Answer: C

Explanation:

The FortiManager SD-WAN overlay system allows only one IPsec template to be assigned to each device per overlay operation.

The guide clarifies:

"If you attempt to assign more than one IPsec template to a FortiGate device for the same overlay type, FortiManager will display an error, preventing duplicate or conflicting tunnel configurations. This limitation ensures a one-to-one mapping between device and overlay template per operation, maintaining configuration integrity and preventing routing issues." This prevents complex troubleshooting scenarios and enforces best practices for overlay design.
