Studying from an updated practice material is necessary to get success in the Fortinet FCSS_SDW_AR-7.4 certification test on the first try. If you don't adopt this strategy, you will not be able to clear the FCSS - SD-WAN 7.4 Architect (FCSS_SDW_AR-7.4) examination. Failure in the FCSS - SD-WAN 7.4 Architect (FCSS_SDW_AR-7.4) test will lead to loss of confidence, time, and money.

Fortinet FCSS_SDW_AR-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	• SD-WAN Troubleshooting: This part assesses the troubleshooting skills of network support specialists. Candidates should be able to diagnose and resolve issues related to SD-WAN rules, session behaviors, routing inconsistencies, and ADVPN connectivity problems to maintain seamless network operations.
Topic 2	• Advanced IPsec: Intended for security engineers, this section covers the deployment of advanced IPsec topologies for SD-WAN, including hub-and-spoke models, ADVPN configurations, and complex multi-hub or multi-region deployments. Candidates need to demonstrate expertise in securing wide-area networks using IPsec technologies.

- **SD-WAN Configuration:** This section of the exam measures the skills of network engineers and covers configuring a basic SD-WAN setup. Candidates are expected to demonstrate their ability to define SD-WAN members and zones effectively, ensuring foundational network segmentation and management.

Get Certified on the First Attempt with Fortinet FCSS_SDW_AR-7.4 Exam Dumps

To make your review more comfortable and effective, we made three versions of FCSS_SDW_AR-7.4 study guide as well as a series of favorable benefits for you. We are concerted company offering tailored services which include not only the newest and various versions of FCSS_SDW_AR-7.4 Practice Engine, but offer one-year free updates services with patient staff offering help 24/7. It means that as long as our professionals update the FCSS_SDW_AR-7.4 learning quiz, you will receive it for free.

Fortinet FCSS - SD-WAN 7.4 Architect Sample Questions (Q34-Q39):

NEW QUESTION # 34

Refer to the exhibit. The administrator analyzed the traffic between a branch FortiGate and the server located in the data center, and noticed the behavior shown in the diagram. When the LAN clients located behind FGT1 establish a session to a server behind DC-1, the administrator observes that, on DC-1, the reply traffic is routed over T2. even though T1 is the preferred member in the matching SD-WAN rule.

What can the administrator do to instruct DC-1 to route the reply traffic through the member with the best performance?

- A. FortiGate route lookup for reply traffic only considers routes over the original ingress interface.
- **B. Enable auxiliary-session under config system settings.**
- C. Enable snat-route-change under config system global.
- D. Enable reply-session under config system sdwan.

Answer: B

Explanation:

To ensure DC-1 responds via the best-performing SD-WAN member (T1) instead of defaulting to T2, enable auxiliary-session under config system settings, so reply traffic is evaluated against current route policies-not bound to the ingress interface.

NEW QUESTION # 35

When a customer delegate the installation and management of its SD-WAN infrastructure to an MSSP, the MSSP usually keeps the hub within its infrastructure for ease of management and to share costly resources.

In which two situations will the MSSP install the hub in customer premises? (Choose two.)

- **A. The administrator expects a large volume of traffic between the branches.**
- B. The customer expects a large amount of VoIP traffic.
- **C. The customer requires SIA with centralized breakout.**
- D. The majority of the branch traffic is directed to a corporate data center.

Answer: A,C

NEW QUESTION # 36

Which three characteristics apply to provisioning templates available on FortiManager? (Choose three.)

- A. A CLI template group can contain CLI templates of both types.
- B. CLI templates are applied in order, from top to bottom.
- C. A CLI template can be of type CLI script or Perl script.
- D. You cannot apply a system template and CLI template to the same FortiGate device.
- E. A template group can include a system template and an SD-WAN template.

Answer: A,B,E

NEW QUESTION # 37

SD-WAN interacts with many other FortiGate features. Some of them are required to allow SD-WAN to steer the traffic. Which three configuration elements that you must configure before FortiGate can steer traffic according to SD-WAN rules? (Choose three.)

- A. Firewall policies
- B. Traffic shaping
- C. Routing
- D. Security profiles
- E. Interfaces

Answer: A,C,E

Explanation:

Before FortiGate can steer traffic according to SD-WAN rules, certain configuration elements must be present. The guide states:

"SD-WAN is not a standalone feature and interacts with several fundamental FortiGate configurations.

Specifically, you must: (1) Define the interfaces (physical, VLAN, or IPsec) that will act as SD-WAN members, (2) Create firewall policies to allow traffic to be steered by SD-WAN, and (3) Set up routing so that traffic has valid routes via SD-WAN members.

Without these, SD-WAN rules will not be able to match or steer any traffic." Security profiles and traffic shaping are not mandatory for basic SD-WAN steering but can be layered on for enhanced security and QoS once foundational elements are present.

FortiOS 7.4 SD-WAN Concept Guide, "Prerequisite Configuration Elements for SD-WAN Steering

NEW QUESTION # 38

Refer to the exhibit. An administrator is troubleshooting SD-WAN on FortiGate. A device behind branch1_fgt generates traffic to the 10.0.0.0/8 network.

The administrator expects the traffic to match SD-WAN rule ID 1 and be routed over HUB1-VPN1.

However, the traffic is routed over HUB1-VPN3.

Based on the output shown in the exhibit, which two reasons, individually or together, could explain the observed behavior? (Choose two.)

Diagnose output

```
fgt_A # diagnose sys sdwan service4

Service(1): Address Mode(IPV4) flags=0x4200 use-shortcut-sla use-shortcut

B      10.1.0.0/24 [200/0] via 192.168.1.29 (recursive via HUB1-VPN1 tunnel 100.64.1.1), 04:11:42. [1/0]
          [200/0] via 192.168.1.61 (recursive via HUB1-VPN2 tunnel 100.64.1.9), 04:11:42. [1/0]
          [200/0] via 192.168.1.93 (recursive via HUB1-VPN3 tunnel 172.16.1.5), 04:11:42. [1/0]
```

- A. HUB1-VPN3 has a lower route priority value (higher priority) than HUB1-VPN1.
- B. HUB1-VPN1 does not have a valid route to the destination
- C. The traffic matches a regular policy route configured with HUB1-VPN3 as the outgoing device
- D. HUB1-VPN3 has a higher member configuration priority than HUB1-VPN1

Answer: B,C

Explanation:

Key Routing Principles

1. SD-WAN rules are policy routes
2. Regular policy routes have precedence over SD-WAN rules
3. Route lookup is done for new and dirty sessions
 - For original and reply traffic
 - Includes policy route lookup
4. SD-WAN rules are skipped if:
 - Best route to destination isn't an SD-WAN member
 - None of the members have a valid route to destination
 - If the preferred member doesn't have a valid route to destination, the next member in the rule is checked
5. Implicit SD-WAN rule equals standard forwarding information base (FIB) lookup
 - If lookup matches ECMP routes, traffic is load balanced using the configured algorithm

There are many ways to help you pass Fortinet certification FCSS_SDW_AR-7.4 exam and selecting a good pathway is a good protection. Dumpcollection can provide you a good training tool and high-quality reference information for you to participate in the Fortinet certification FCSS_SDW_AR-7.4 exam. Dumpcollection's practice questions and answers are based on the research of Fortinet certification FCSS_SDW_AR-7.4 examination Outline. Therefore, the high quality and high authoritative information provided by Dumpcollection can definitely do our best to help you pass Fortinet certification FCSS_SDW_AR-7.4 exam. Dumpcollection will continue to update the information about Fortinet certification FCSS_SDW_AR-7.4 exam to meet your need.
