Valid C_TS462_2023 Test Dumps | Test C_TS462_2023 Guide Online

Budget-friendly C_TS462_2023 study guides have been created by Itcertking because the registration price for the SAP C_TS462_2023 exam is already high. You won't ever need to look up information in various books because our SAP C_TS462_2023 Real Questions are created with that in mind. We provide 365 days free upgrades.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Sales Sample Questions (Q20-Q25):

NEW QUESTION # 20

You want to set up a discount with a scale value (condition type K029) that is based on the material group "spare parts". The

discount should be granted for all items in a sales order that are spare parts.
What do you need to set up for condition type K029 so it meets this requirement?

- A. You need to set the Condition Update indicator for condition type K029.
- **B. You need to set up condition type K029 as a group condition.**
- C. You need to set up condition type K029 as a header condition.
- D. You need to set the Condition Index indicator for condition type K029.

Answer: B

Explanation:
Pricing and condition technique

NEW QUESTION # 21

You investigate the standard behavior of the two sales document types Delivery Free of Charge (FD) and Subsequent Delivery Free of Charge (SD). What do you find out? Note: There are 2 correct answers to this question.

- A. In both cases, materials are priced and billed normally but the shipping is free of charge.
- B. A Subsequent Delivery Free of Charge has to be created with reference to a preceding document.
- **C. A Delivery Free of Charge is used to deliver material due to a complaint.**
- **D. Documents of both document types can use the same item category.**

Answer: C,D

Explanation:
Regarding the standard behavior of Delivery Free of Charge (FD) and Subsequent Delivery Free of Charge (SD):
A . Documents of both document types can use the same item category. This is possible as both document types may deal with delivering goods free of charge, but under different circumstances.
D . A Delivery Free of Charge is used to deliver material due to a complaint. This is a common use of FD documents, where goods are delivered free of charge as a goodwill gesture or to rectify a complaint.

NEW QUESTION # 22

When determining a storage location during delivery processing, the system uses a rule defined in which of the following?

- A. Shipping point
- **B. Outbound delivery type**
- C. Material
- D. Outbound delivery item category

Answer: B

Explanation:
Shipping Process and Customizing

NEW QUESTION # 23

In your pricing procedure you have several condition types for a price such as PROO, PR02, PN00 and HM00. Only one of these prices is taken into account. Which setting causes this behavior?

- A. Header condition
- B. Condition function
- **C. Exclusion indicator**
- D. Condition class

Answer: C

Explanation:
In SAP S/4HANA, a pricing procedure determines how pricing conditions (e.g., PROO, PR02, PN00, HM00) are applied to calculate the final price in a sales document, such as a sales order. The question states that only one of several condition types for a

price is taken into account, meaning that only one price condition is selected or applied, while the others are ignored. This behavior is controlled by the Exclusion indicator in the pricing procedure configuration.

Let's break down the question and analyze each option to understand why the Exclusion indicator is the correct choice:

Understanding Pricing in SAP S/4HANA

* Pricing procedure is a sequence of steps that determines how prices, discounts, surcharges, and taxes are calculated in a sales document.

* Condition types (e.g., PROO, PR02, PN00, HM00) represent individual pricing elements, such as base prices, promotional prices, or net prices. Each condition type has specific settings that control its behavior.

* When multiple condition types for prices exist in a pricing procedure (e.g., multiple price conditions), SAP allows configuration to ensure only one price is applied to avoid conflicts or double pricing.

* The question implies that the system selects only one price condition from PROO, PR02, PN00, or HM00, which suggests a mechanism is in place to exclude the others.

Analysis of Options

* A. Condition function:

* The Condition function is not a standard term in SAP S/4HANA pricing configuration. It may refer to the role of a condition type (e.g., price, discount, surcharge), but it is not a specific setting that controls whether only one condition is applied. Instead, the condition function is determined by settings like the condition class and calculation type, which define the purpose and calculation logic of a condition type.

* Why incorrect: There is no "Condition function" setting that directly causes only one price condition to be selected among multiple price conditions.

* B. Exclusion indicator:

* The Exclusion indicator is a setting in the pricing procedure configuration that controls condition type exclusivity. It is used to define condition exclusion groups, which determine which condition types are mutually exclusive. If multiple price condition types (e.g., PROO, PR02, PN00, HM00) are assigned to an exclusion group, the system applies a rule (e.g., selecting the condition with the best price, most specific condition, or first valid condition) to ensure only one condition is active.

* In SAP, condition exclusion is configured via condition exclusion groups (transaction V/08 or SPRO > Sales and Distribution > Basic Functions > Pricing > Condition Exclusion). For example:

* You create an exclusion group and assign condition types PROO, PR02, PN00, and HM00 to it.

* You define an exclusion rule, such as "select the condition with the lowest price" or "select the first valid condition."

* During pricing, the system evaluates the conditions in the exclusion group and applies only one based on the rule, deactivating the others.

* This mechanism perfectly explains the behavior described in the question, where only one price condition is taken into account.

* Why correct: The Exclusion indicator (via condition exclusion groups) ensures that only one of the price condition types is applied, based on the defined exclusion rule.

* C. Condition class:

* The Condition class is a setting in the condition type configuration (transaction V/06) that categorizes the condition type's purpose, such as:

* B: Prices (e.g., PROO, PR02 for base prices).

* A: Discounts or surcharges.

* C: Taxes, etc.

* While the condition class determines whether a condition is treated as a price, discount, or tax, it does not control whether multiple price conditions are mutually exclusive. For example, multiple condition types can have the condition class "B" (Prices) and still coexist unless an exclusion rule is applied.

* Why incorrect: The Condition class defines the type of condition but does not enforce the selection of only one price condition among multiple price conditions.

* D. Header condition:

* A Header condition is a setting in the condition type configuration that determines whether a condition is applied at the header level (affecting the entire document) or the item level (affecting specific items). For example, a header condition might apply a flat surcharge to the entire sales order, while item conditions like PROO or PR02 apply to specific materials.

* While header conditions affect how a condition is applied, they do not control whether only one price condition is selected from multiple price conditions at the item level.

* Why incorrect: The Header condition setting is unrelated to ensuring that only one price condition (e.g., PROO, PR02, PN00, or HM00) is applied.

Why Exclusion Indicator is the Correct Choice

* The Exclusion indicator is part of the condition exclusion configuration in the pricing procedure. It is used to manage scenarios where multiple price condition types (e.g., PROO for standard price, PR02 for promotional price, PN00 for net price, HM00 for manual price) are defined, but only one should be applied to avoid conflicting prices.

* For example:

* In the pricing procedure (transaction V/08), you define a condition exclusion group and assign PROO, PR02, PN00, and HM00 to it.

* You set an exclusion rule, such as:

- * Rule A: Select the condition with the lowest price.
- * Rule B: Select the condition with the highest price.
- * Rule C: Select the first valid condition in the sequence.
- * During sales order processing, the system evaluates the conditions in the exclusion group, applies the rule, and deactivates all other conditions in the group, ensuring only one price is used.
- * This is a common setup in SAP S/4HANA to handle scenarios with multiple price conditions, such as standard prices, promotional prices, or customer-specific prices, ensuring clarity and consistency in pricing.

Practical Context

- * In the SAP system, condition exclusion is configured in the following path:
SPRO > Sales and Distribution > Basic Functions > Pricing > Condition Exclusion > Condition Exclusion for Groups of Conditions.
- * Alternatively, use transaction VOK8 to maintain condition exclusion groups and assign condition types.
- * During sales order creation, the system checks the pricing procedure, identifies the exclusion group, and applies the exclusion rule to select one condition type (e.g., PROO) while deactivating others (e.g., PR02, PN00, HM00).
- * For example, if PROO has a price of \$100, PR02 has \$90, and the exclusion rule is "select the lowest price," the system will apply PR02 and exclude the others.

Why Other Options Don't Fit

- * Condition function: Not a standard SAP term or setting for controlling exclusivity.
- * Condition class: Defines the type of condition (e.g., price vs. discount) but doesn't manage exclusivity between multiple price conditions.
- * Header condition: Controls the level of application (header vs. item) but doesn't determine which price condition is selected.

NEW QUESTION # 24

When an outbound delivery is created for a sales order, from which object does the system determine the default delivery type to be used?

- A. Shipping conditions
- B. Sales order item category
- C. Sales order type
- D. Shipping point

Answer: C

Explanation:

The default delivery type for an outbound delivery created from a sales order is determined from:

A. Sales order type: The sales order type has configurations that determine the subsequent document flow, including the default delivery type to be used.

NEW QUESTION # 25
