What's more, part of that Fast2test CWNA-109 dumps now are free: https://drive.google.com/open?id=1jn6w3ITVLp9wJk3bHxZ-j7K9YQk1d_tq

If you're still learning from the traditional old ways and silently waiting for the test to come, you should be awake and ready to take the exam in a different way. Study our CWNA-109 training materials to write "test data" is the most suitable for your choice, after recent years show that the effect of our CWNA-109 guide dump has become a secret weapon of the examinee through qualification examination, a lot of the users of our CWNA-109 guide dump can get unexpected results in the examination. It can be said that our CWNA-109 study questions are the most powerful in the market at present, not only because our company is leader of other companies, but also because we have loyal users. CWNA-109 training materials are not only the domestic market, but also the international high-end market. We are studying some learning models suitable for high-end users. Our research materials have many advantages.

Preparing for CWNP Wireless Network Administrator (CWNA) (CWNA-109) exam can be a challenging task, especially when you're already juggling multiple responsibilities. People who don't study with updated CWNP CWNA-109 practice questions fail the test and lose their resources. If you don't want to end up in this unfortunate situation, you must prepare with actual and Updated CWNA-109 Dumps of Fast2test. At Fast2test, we believe that one size does not fit all when it comes to CWNP CWNA-109 exam preparation.

Updated CWNP CWNA-109 Practice Material for Exam Preparation

Our world is in the state of constant change and evolving. If you want to keep pace of the time and continually transform and challenge yourself you must attend one kind of CWNA-109 certificate test to improve your practical ability and increase the quantity of your knowledge. Buying our CWNA-109 Study Materials can help you pass the test smoothly. Our CWNA-109 study materials have gone through strict analysis and verification by senior experts and are ready to supplement new resources at any time.

CWNP Wireless Network Administrator (CWNA) Sample Questions (Q117-Q122):

NEW QUESTION # 117

You are reconfiguring an AP to use the short guard interval. How long will the new guard interval duration be after the change?

- A. 10 ms
- B. 104 ms
- C. 400 ns
- D. 800 ns

Answer: C

Explanation:

The short guard interval is an optional feature of 802.11n and 802.11ac that reduces the time between OFDM symbols from 800 ns to 400 ns. This can increase the data rate by about 11%, but also requires more precise timing and synchronization between the transmitter and the receiver. The short guard interval is only used when both the AP and the client support it and agree to use it .

Radio Frequency Signal and Antenna Concepts, page 157.

NEW QUESTION # 118

You are a small business wireless network consultant and provide WLAN services for various companies.

You receive a call from one of your customers stating that their laptop computers suddenly started experiencing much slower data transfers while connected to the WLAN. This company is located in a multi-tenant office building and the WLAN was designed to support laptops, tablets and mobile phones. What could cause a sudden change in performance for the laptop computers?

- A. The antennas in the laptops have been repositioned.
- B. The sky was not as cloudy that day as it typically is and the sun also radiates electromagnetic waves.
- C. A new tenant in the building has set their AP to the same RF channel that your customer is using.
- D. A few of your customer's users have Bluetooth enabled wireless headsets.

Answer: C

Explanation:

A possible cause of a sudden change in performance for the laptop computers is that a new tenant in the building has set their AP to the same RF channel that your customer is using. This can create co-channel interference (CCI), which is a situation where two or more APs or devices use the same or overlapping channels in the same area. CCI can degrade the performance of WLANs by increasing contention, collisions, retransmissions, and latency. CCI can also reduce the effective range and throughput of WLANs by lowering the signal-to-noise ratio (SNR). To avoid or mitigate CCI, it is recommended to use non-overlapping channels, adjust transmit power levels, or implement channel management techniques such as dynamic frequency selection (DFS) or load balancing.

The sky condition, antenna position, or Bluetooth headset are not likely to cause a sudden change in performance for the laptop computers. NEW QUESTION # 119

In a long-distance RF link, what statement about Fade Margin is true?

- A. The Fade Margin of a long-distance radio link should be equivalent to the receiver's low noise filter gain.
- B. The Fade Margin is a measurement of signal loss through free space and is a function of frequency and distance.
- C. Fade Margin is an additional pad of signal strength designed into the RF system to compensate for unpredictable signal

fading.

- D. A Fade Margin is unnecessary on a long-distance RF link if more than 80% of the first Fresnel zone is clear of obstructions.

Answer: C

Explanation:

Fade Margin is an additional pad of signal strength designed into the RF system to compensate for unpredictable signal fading. It is the difference between the receiver's sensitivity and the actual received signal level. A higher Fade Margin indicates a more robust link that can withstand interference, attenuation, or other factors that may reduce the signal strength. A lower Fade Margin means that the link is more susceptible to failure or performance degradation. Fade Margin is usually expressed in decibels (dB) and can be calculated by subtracting the receiver sensitivity from the received signal level. References: 1, Chapter 2, page 51; 2, Section 2.1

NEW QUESTION # 120

ABC Company is planning to install a new 802.11ac WLAN, but wants to upgrade its wired infrastructure first to provide the best user experience possible. ABC Company has hired you to perform the RF site survey.

During the interview with the network manager, you are told that the new Ethernet edge switches will support VoIP phones and 802.11 access points, both using 802.3 PoE.

After hearing this information, what immediate concerns do you note?

- A. The power budget in the edge switches must be carefully planned and monitored based on the number of supported PoE devices.
- B. VoIP phones and 802.11 access points should not be powered by the same edge switch due to distortion.
- C. If the switches are in optimal locations for VoIP phones, they are likely to be suboptimal locations for 802.11 APs
- D. The edge Ethernet switches should support Ether-channel to get the best results out of the network.

Answer: A

Explanation:

An immediate concern that you note after hearing this information is that the power budget in the edge switches must be carefully planned and monitored based on the number of supported PoE devices. PoE stands for Power over Ethernet and is a technology that allows Ethernet switches to deliver power along with data to devices such as VoIP phones and 802.11 access points. PoE devices are classified into different classes based on their power consumption and output. The edge switches have a limited power budget that determines how many PoE devices they can support simultaneously. If the power budget is exceeded, some PoE devices may not receive enough power or may shut down unexpectedly. Therefore, it is important to plan and monitor the power budget in the edge switches based on the number and class of PoE devices connected to them. Using Ether-channel, placing switches in optimal locations, or avoiding distortion are not immediate concerns related to PoE devices. NEW QUESTION # 121

A client STA must choose the best AP for connectivity. As part of the evaluation, it must verify compatible data rates. What can the client STA use to verify that an AP supports the same data rates that it supports?

- A. Data frames sent between the AP and current clients STAs
- B. Probe request frames transmitted by other client STAs
- C. Authentication frames transmitted by the other client STAs
- D. Beacon frames transmitted by the AP

Answer: D

Explanation:

The client STA can use Beacon frames transmitted by the AP to verify that an AP supports the same data rates that it supports. Beacon frames are management frames that are periodically broadcasted by the APs to announce their presence, capabilities, and parameters. One of the information elements contained in the Beacon frames is the Supported Rates or Extended Supported Rates, which lists the data rates that the AP can use for communication. The client STA can compare its own data rates with those advertised by the AP to determine if they are compatible. Data frames, authentication frames, and probe request frames do not

contain information about data rates. References: [CWNP Certified Wireless Network Administrator Official Study Guide: ExamCWNA-109], page 133; [CWNA: Certified Wireless Network Administrator Official Study Guide: ExamCWNA-109], page 123.

NEW QUESTION # 122

.....

About the materials that relate to CWNP CWNA-109 exam, many websites can offer the exam materials. But these websites can't guarantee the quality of the exam dumps, meanwhile when you fail the exam, they can't also give you FULL REFUND guarantee. Compared with common reference materials, Fast2test CWNP CWNA-109 certification training materials is the tool that worth your use. With the help of Fast2test CWNP CWNA-109 Real Questions and answers, you can absolutely well prepare for the exam and pass the exam with ease. If you want to great development in IT industry, you need to take IT certification exam. If you want to pass your IT certification test successfully, it is necessary for you to use Fast2test exam dumps.
