Effective Way to Prepare for Salesforce Slack-Admn-201 Certification Exam?

Our Slack-Admn-201 training prep can be applied to different groups of people. Whether you are trying this exam for the first time or have experience, our Slack-Admn-201 learning materials are a good choice for you. Whether you are a student or an employee, our Slack-Admn-201 exam questions can meet your needs. This is due to the fact that our Slack-Admn-201 Learning Materials are very user-friendly and express complex information in easy-to-understand language. We assure you that once you choose our Slack-Admn-201 practice materials, your learning process is very easy.

Salesforce Certified Slack Administrator Sample Questions (Q187-Q192):

NEW QUESTION # 187

As an Org Admin of a large Enterprise, you perform an annual channel cleanup exercise that includes archiving, deleting, and moving channels to an alternative workspace based on set criteria.

On average, there are around 1,000 channels that meet the criteria during this cleanup.

What is the most effective way to do this?

- A. Use Slack's channel management tools.
- B. Take action from each channel's settings.
- C. Request that each channel owner take action.
- **D. Utilize bulk channel lifecycle management APIs.**

Answer: D

Explanation:

Slack officially recommends for large-scale channel management:

"Use Slack's bulk channel management APIs (like `conversations.archive` and `conversations.rename`) to automate cleanup activities at scale." Manually using settings (C) or requesting owners' actions (D) is impractical for 1,000+ channels. Slack's standard UI tools (A) are efficient but not optimized for this volume compared to API automation.

(Reference: Slack Administration Study Guide - Bulk Channel Lifecycle Management)

-

NEW QUESTION # 188

The Slack implementation team at Large Inc is confirming all of the settings on their new Enterprise Grid organization and wants to make sure that they have appropriately involved the Security team in any critical security decisions.

Which TWO of the following settings are most critical to discuss with their Security team? (Choose two.)

- A. Who is allowed to add custom emoji
- B. Who can create and archive channels
- **C. Whether to enable admin-approved apps**
- **D. Who can invite new members**

Answer: C,D

Explanation:

Security-critical settings involve decisions that could expose the organization to risk through external access or the addition of third-party apps. Slack documentation specifies:

"App management and member invitation settings are critical security configurations. Restricting who can add apps (admin-approved apps) and who can invite new members ensures better control over external access and data exposure." Custom emoji (B) and channel creation (C) impact user experience but are not considered critical security matters.

(Reference: Slack Administration Study Guide - Enterprise Security Controls and Settings)

-

NEW QUESTION # 189

You're the Primary Org Owner of a large Slack Enterprise Grid org composed of 10 workspaces for individual business units.

How should you delegate responsibilities appropriately?

- **A. Delegate a Workspace Admin from each business unit to handle everyday tasks, such as member requests.**
- B. Delegate an Org Owner from each business to handle everyday tasks, such as member requests.
- C. Create a multi-workspace channel for selected members to manage all admin requests for the organization.
- D. Delegate an Org Admin from each business unit to handle everyday tasks, such as member requests.

Answer: A

Explanation:

Slack recommends:

"Workspace Admins are ideal for handling workspace-specific tasks such as member management, approval of apps, and settings management for individual business units." Assigning Org Admins (B) or Org Owners (D) grants broader permissions than necessary and increases risk.

Creating a channel for managing requests (C) does not delegate actual admin permissions.

(Reference: Slack Administration Study Guide - Delegating Workspace-Level Administration)

-

NEW QUESTION # 190

You're a Primary Org Owner for a bank's Slack Enterprise Grid.

Your compliance team is concerned that customer service employees may accidentally share sensitive information like account numbers.

What recommendation should you make?

- A. Build a bot that will message members and ask them to remove sensitive customer data in the event that it is shared.
- B. Install an eDiscovery app to log all message content in the channel, and maintain a record of all sensitive content shared.
- **C. Integrate with a Data Loss Protection (DLP) provider to remove sensitive data shared in Slack.**
- D. Designate one admin per channel to monitor and report sensitive data to the compliance team.

Answer: C

Explanation:

Slack's compliance and security guidance states:

"A Data Loss Prevention (DLP) integration actively monitors Slack messages and files for sensitive information, and can block, quarantine, or delete data according to your compliance policies." eDiscovery (A) archives content but doesn't prevent exposure. Bots (C) are reactive, not proactive. Manual monitoring by admins (D) is inefficient and error-prone.

(Reference: Slack Administration Study Guide - Integrating DLP Solutions with Slack)

NEW QUESTION # 191

You're a Workspace Admin for your organization's Slack Business+ instance. You need to report on the number of both daily and weekly active users within your workspace in the last 30 days.

Where can you find this information?

(Select the best answer.)

- **A. Workspace analytics dashboard**
- B. Org analytics dashboard
- C. Analytics members dashboard
- D. Message activity analytics

Answer: A

Explanation:

According to Slack official documentation:

"Workspace analytics allows Workspace Owners and Admins to view data about members, channels, and activity within the workspace, including daily and weekly active users." The Org Analytics Dashboard (A) is only available in Enterprise Grid. The Analytics Members Dashboard (C) focuses on member-specific stats, and Message Activity Analytics (D) focuses specifically on message data, not user activity overall.
