It is necessary to strictly plan the reasonable allocation of CISSP test time in advance. Many students did not pay attention to the strict control of time during normal practice, which led to panic during the process of examination, and even some of them are not able to finish all the questions. If you purchased CISSP learning dumps, each of your mock exams is timed automatically by the system. CISSP learning dumps provide you with an exam environment that is exactly the same as the actual exam. It forces you to learn how to allocate exam time so that the best level can be achieved in the examination room.

ISC CISSP Exam is a challenging but rewarding certification for those interested in pursuing a career in information security. It is a testament to one's knowledge and skills in the field and can open up a world of opportunities for career advancement and professional growth.

ISC CISSP (Certified Information Systems Security Professional) Certification Exam is a globally recognized certification program designed for professionals seeking to specialize in information security. Certified Information Systems Security Professional (CISSP) certification exam is administered by the International Information System Security Certification Consortium (ISC)², a non-profit organization dedicated to advancing the cybersecurity industry through education and certification.

Candidates who become ISC CISSP certified demonstrate their worth in the ISC field. The Certified Information Systems Security Professional (CISSP) (CISSP) certification is proof of their competence and skills. This is a highly sought-after skill in large ISC companies and makes a career easier for the candidate. To become certified, you must pass the Certified Information Systems Security Professional (CISSP) (CISSP) certification exam. For this task, you need high-quality and accurate Certified Information Systems Security Professional (CISSP) (CISSP) exam dumps. We have seen that candidates who study with outdated Certified Information Systems Security Professional (CISSP) (CISSP) practice material don't get success and lose their resources.

ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q321-Q326):

NEW QUESTION # 321

What set of principles is the basis for information systems controls?

- A. Authentication, audit trails, and awareness briefings
- **B. Need to know, identification, and authenticity**
- C. Individual accountability, auditing, and separation of duties
- D. Audit trails, limited tenure, and awareness briefings

Answer: B

Explanation:

"In addition to the CIA Triad, there is a plethora of other security-related concepts, principles, and tenants that should be considered and addressed when designing a security policy and deploying a security solution. This section discusses privacy, identification, authentication, authorization, accountability, nonrepudiation, and auditing." Pg. 133 Tittel: CISSP Study Guide

NEW QUESTION # 322

Which of the following is considered the PRIMARY security issue associated with encrypted e- mail messages?

- A. Storing attachments in centralized repositories
- B. Greater costs associated for backups and restores
- C. Scanning for viruses and other malware
- D. Key distribution

Answer: C

Explanation:

With encrypted email, you can bypass a lot of firewall filters looking for viruses and malware. Firewalls cant scan encrypted data for malicious threats.

NEW QUESTION # 323

You are part of a security staff at a highly profitable bank and each day, all traffic on the network is logged for later review. Every Friday when major deposits are made you're seeing a series of bits placed in the "Urgent Pointer" field of a TCP packet. This is only 16 bits which isn't much but it concerns you because:

- A. This could be a sign of covert channeling in bank network communications and should be investigated.
- B. It could be a symptom of malfunctioning network card or drivers and the source system should be checked for the problem.
- C. It could be a sign of a damaged network cable causing the issue.
- D. It is normal traffic because sometimes the previous fields 16 bit checksum value can over run into the urgent pointer's 16 bit field causing the condition.

Answer: A

Explanation:

The Urgent Pointer is used when some information has to reach the server ASAP.

When the TCP/IP stack at the other end sees a packet using the Urgent Pointer set, it is duty bound to stop all ongoing activities and immediately send this packet up the stack for immediate processing. Since the packet is plucked out of the processing queue and acted upon immediately, it is known as an Out OfBand (OOB) packet and the data is called Out OfBand (OOB) data. The Urgent Pointer is usually used in Telnet, where an immediate response (e.g. the echoing of characters) is desirable.

Covert Channels are not directly synonymous with backdoors. A covert channel is simply using a communication protocol in a way it was not intended to be used or sending data without going through the proper access control mechanisms or channels. For example, in a Mandatory Access Control systems a user at secret has found a way to communicate information to a user at Confidential without going through the normal channels.

In this case the Urgent bit could be use for a few reasons:

1. It could be to attempt a Denial of service where the host receiving a packet with the Urgent bit set will give immediate attention to the request and will be in wait state until the urgent message is receive, if the sender does not send the urgent message then it will simply sit there doing nothing until it times out. Some of the TCP/IP stacks used to have a 600 seconds time out, which means that for 10 minutes nobody could use the port. By sending thousands of packet with the URGENT flag set, it would create a very effective denial of service attack.
2. It could be used as a client server application to transmit data back and forward without going through the proper channels. It would be slow but it is possible to use reserved fields and bits to transmit data outside the normal communication channels.

The other answers are incorrect The following reference(s) were/was used to create this question:

<http://www.vijaymukhi.com/vmis/tcp.htm> and <http://www.fas.org/irp/nsa/rainbow/tg030.htm> document covering the subject of covert channels and also see: <http://gray-world.net/papers.shtml> which is a large collection of documents on Covert Channels

NEW QUESTION # 324

A database View operation implements the principle of:

- A. Least privilege.
- B. Separation of duties.
- C. Referential integrity.
- D. Entity integrity.

Answer: A

Explanation:

The correct answer is "Least privilege". Least privilege, in the database context, requires that subjects be granted the most restricted set of access privileges to the data in the database that are consistent with the performance of their tasks.

Separation of duties, assigns parts of security-sensitive tasks to several individuals.

Entity integrity requires that each row in the relation table must have a non-NULL attribute. Relational integrity, answer d, refers to the requirement that for any foreign key attribute, the referenced relation must have the same value for its primary key.

NEW QUESTION # 325

The Internet can be utilized by either?

- A. Public or private networks (with a Virtual Private Networks).
- B. Public or home networks (with a Virtual Private Networks).
- C. Private or public networks (with a Virtual Private Networks).
- D. Home or private networks (with a Virtual Private Networks).

Answer: D

NEW QUESTION # 326
