Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q139-Q144):

NEW QUESTION # 139

An existing serverless application processes uploaded image files. The process currently uses a single Lambda function that takes an image file, performs the processing, and stores the file in Amazon S3. Users of the application now require thumbnail generation of the images. Users want to avoid any impact to the time it takes to perform the image uploads.

How can thumbnail generation be added to the application, meeting user requirements while minimizing changes to existing code?

- A. Create an S3 event notification to an SQS Queue. Create a scheduled Lambda function that processes the queue, and

generates and stores thumbnails.

- B. Change the existing Lambda function handling the uploads to create thumbnails at the time of upload. Have the function store both the image and thumbnail in Amazon S3.
- **C. Create an S3 event notification with a Lambda function destination. Create a new Lambda function to generate and store thumbnails.**
- D. Create a second Lambda function that handles thumbnail generation and storage. Change the existing Lambda function to invoke it asynchronously.

Answer: C

Explanation:

NEW QUESTION # 140

The upload of a 15 GB object to Amazon S3 fails. The error message reads: "Your proposed upload exceeds the maximum allowed object size." What technique will allow the Developer to upload this object?

- A. Contact AWS Support to increase the object size limit.
- B. Upload the object to another AWS region.
- **C. Upload the object using the multi-part upload API.**
- D. Upload the object over an AWS Direct Connect connection.

Answer: C

NEW QUESTION # 141

A company uses a third-party tool to build, bundle, and package its applications on-premises. and store them locally. The company uses Amazon EC2 instances to run its front-end applications. How can an application be deployed from the source control system onto the EC2 instances?

- A. Create a repository using AWS CodeCommit to automatically trigger a deployment to the EC2 instances
- B. Use AWS CodeDeploy and point it to the local storage to directly deploy a bundle in a zip, tar, or tar.gz format
- **C. Upload the bundle to an Amazon S3 bucket and specify the S3 location when doing a deployment using AWS CodeDeploy**
- D. Use AWS CodeBuild to automatically deploy the latest build to the latest EC2 instances

Answer: C

NEW QUESTION # 142

Which one of the following operations is NOT a DynamoDB operation?

- **A. BatchDeleteItem**
- B. BatchWriteItem
- C. DescribeTable
- D. BatchGetItem

Answer: A

Explanation:

In DynamoDB, DeleteItem deletes a single item in a table by primary key, but BatchDeleteItem doesn't exist.

NEW QUESTION # 143

An account owner has created an IAM user with the name TestAWS. The account owner wants to give EC2 access of only the US West region to that IAM user. How can the owner configure this?

- A. It is not possible to provide access based on the region
- B. **Create an IAM policy and define the region in the condition**
- C. While creating a policy provide the region as a part of the resources
- D. Create an IAM user in the US West region and give access to EC2

Answer: B

Explanation:

The IAM policy is never region specific. If the user wants to configure the region specific setting, he needs to provide conditions as part of the policy.
