Salesforce Process Automation Accredited Professional Sample Questions (Q20-Q25):

NEW QUESTION # 20

Universal Containers recently automated a number of processes. The Administrator received a notification that some of the Flows have exceeded the CPU time limit. Which three are ways the Administrator can decrease the CPU time usage?

- A. Reduce the number of elements
- B. Reduce the number of cross-object references
- C. Reduce the number of formulas
- D. Increase the Flow Interview timeout
- E. Increase the number of Decision Bypass elements

Answer: A,B,C

NEW QUESTION # 21

Northern Trail Outfitters (NTO) is considering Flow Orchestration to automate several complex business processes for one of its departments. NTO has well-established deployment guidelines, and teams are expected to follow those guidelines when working with deployments. Which option should the Administrator keep in mind about deploying orchestrations?

- A. The Administrator can deploy orchestrations using "deploy orchestration API" option in workbench
- B. The Administrator can deploy orchestrations using change sets
- C. The Administrator will need to configure "Orchestration Deployment" certificate in each environment
- D. The Administrator can deploy active orchestrations only in production

Answer: B

NEW QUESTION # 22

What is a flow interview?

- A. Questions posed by flow designer to potential flow users.
- B. Instance of a flow.
- C. A flow that takes the same path as the original flow.
- D. Connection or interlink between two to more internal elements of a flow.

Answer: B

Explanation:

A flow interview (C) is an instance of a flow that is running. Each time a flow is executed, a new flow interview is created. This interview represents the execution path taken by the flow, including the data entered and processed throughout the flow's execution. Understanding flow interviews is crucial for debugging and optimizing flows. Reference: Salesforce Help Documentation on Flow

Concepts.

NEW QUESTION # 23

Which resource should be used as a placeholder to store temporary values, and can be changed during a Flow?

- A. Formula
- B. Error Message
- C. Variable
- D. Text Template

Answer: C

Explanation:

Variables in Salesforce Flows are used as placeholders to store values that can change during the execution of the flow. Variables can hold different types of data, such as text, numbers, or records, and can be updated as the flow progresses, making them ideal for storing temporary values needed throughout the flow. Reference: Salesforce Help - Flow Variables

NEW QUESTION # 24

Which process must be automated using Flow Builder?

- A. Whenever posting to chatter is involved.
- B. Whenever outbound messages are involved.
- C. Whenever deletion of records is involved.
- D. Whenever time-based actions are involved.

Answer: D

Explanation:

A process that must be automated using Flow Builder is one where time-based actions are involved (B). Flow Builder supports the creation of flows that can execute actions at specified times, making it suitable for scenarios that require delayed or scheduled automation, such as sending follow-up emails or updating records after a certain period. Reference: Salesforce Help Documentation on Flow Builder and Time-Based Actions.

NEW QUESTION # 25

.....
