## PURE CERTIFIED FLASHARRAY IMPLEMENTATION SPECIALIST EXAM PREP 2026 FULL EXAMINATION

● Minimum of 2, maximum of 4. Not supported to serve multiple geographic regions or disparate networks within client organization. Answer: How many VPN tunnels does ServiceNow support and why

● Through Self-service form in customer support system called HI. Typically takes 2 weeks. Answer: How do you submit a request VPN?

● No, connection is established over HTTPS and is thus encrypted, no VPN needed. Answer: VPN Needed for Traffic into ServiceNow?

● VPN for LDAP. Answer: Recommended that customers implement LDAPS (LDAP over SSL) v. standard LDAP (non-encrypted). Standard LDAP integration communicates over TCP on port 389. LDAPS communicates over TCP on 636 and requires a digital certificate which must be uploaded to instance. VPN to be used if LDAP instead of LDAPS

● VPN for JDBC & Web Services. Answer: Recommended to install MID Server inside network, MID server will communicate with instance over HTTPS

As we all know, in the highly competitive world, we have no choice but improve our soft power (such as FlashArray-Implementation-Specialist certification). You may be in a condition of changing a job, but having your own career is unbelievably hard. Then how to improve yourself and switch the impossible mission into possible is your priority. Here come our FlashArray-Implementation-Specialist Guide torrents giving you a helping hand. It is of great significance to have FlashArray-Implementation-Specialist question torrent to pass exams as well as highlight your resume, thus helping you achieve success in your workplace.

### Pure Storage FlashArray-Implementation-Specialist Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Installation: This section of the exam measures the skills of Enterprise Infrastructure Technicians and focuses on executing a successful installation of FlashArray systems. It tests the ability to perform physical setup, cabling, configuration of network settings, and the application of initial system configurations necessary for full deployment.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Upgrades: This section of the exam measures the skills of FlashArray Implementation Specialists and focuses on tasks involved in managing firmware and software upgrades. Candidates must demonstrate knowledge of upgrade planning, verification steps, and rollback procedures, ensuring that systems are updated with minimal disruption to service.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Post-Installation</li><li>• Upgrade: This section of the exam measures the skills of FlashArray Implementation Specialists and evaluates how professionals confirm system functionality after installation or an upgrade. It involves validating connectivity, running health checks, confirming configurations, and ensuring that the deployment meets operational expectations.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Pre-Installation</li><li>• Upgrade: This section of the exam measures the skills of Enterprise Infrastructure Technicians and covers all preparation activities before deploying or upgrading a Pure Storage FlashArray. It includes understanding environmental requirements, verifying prerequisites, checking compatibility, and validating system readiness through appropriate tools and documentation.</li></ul>

### Pure Storage Certified FlashArray Implementation Specialist Sample Questions (Q149-Q154):

#### NEW QUESTION # 149

An Implementation Engineer is assigned to install a 4X Module 9.1 TB Conversion Kit in a Flash Array Chassis. Why are there only four Direct Flash Modules?

- A. To widen an existing write group.
- B. To replace a missing shipment.
- C. To fill out enclosure bays.

**Answer: A**

Explanation:

A "4X Module" kit is specifically designed to widen an existing write group (RAID set).

Write Group Geometry: In standard FlashArray//X configurations, DirectFlash Modules (DFMs) operate in "Write Groups" (typically 10 modules wide for a standard data pack). However, to offer more flexible entry points or capacity expansion options, Pure Storage allows configurations that start with smaller write groups (e.g., 6 modules).

Widening: When a customer wants to expand capacity or performance on these smaller configurations without adding a full new 10-pack, they can purchase a widening kit (in this case, 4 modules).

Process: The Implementation Engineer installs these 4 modules into the empty slots. The Purity operating system then logically integrates these new drives into the existing narrow write group, "widening" it to the standard width (e.g., 6 + 4 = 10). This operation redistributes parity and data across the full set of 10 drives, improving performance and efficiency.

### NEW QUESTION # 150

When should a FlashArray support case be opened?

- A. Before starting install
- B. Once install is completed
- C. Once an issue arises

**Answer: A**

Explanation:

Opening a support case before starting the installation ensures timely assistance and coordination with support throughout the deployment process.

### NEW QUESTION # 151

Which PCIe slot must be used for a SAS HBA on R4B revision controllers?

- A. PCIe slot 1
- B. PCIe slot 0
- C. PCIe slot 4

**Answer: A**

Explanation:

While modern FlashArrays (like the XR4 and XL series) primarily use NVMe-oF/RoCE for backend connectivity, specific configurations or legacy support scenarios may still require a SAS HBA (Serial Attached SCSI Host Bus Adapter), for example, when connecting to older SAS-based expansion shelves during a migration or hybrid configuration.

For R4B revision controllers (a specific hardware revision of the Gen 4 controller), the strict hardware addressing map requires that any SAS HBA be installed in PCIe Slot 1.

Slot 1 provides the specific PCIe lane routing and BIOS interrupts required for the legacy SAS controller to be recognized and function without conflicting with the native NVMe fabric.

Installing the card in Slot 0 (typically reserved for RoCE/Ethernet backend) or Slot 4 would likely result in the card being ignored by Purity or causing boot errors due to resource conflict.

### NEW QUESTION # 152

During a FlashArray//X to FlashArray//XL hardware upgrade, when should the Implementation Engineer insert the DFMD modules into the FlashArray//XL?

- A. As part of initial install before power-on
- B. Immediately following the purity software upgrade
- C. After booting the FlashArray//XL into shelf mode

**Answer: C**

Explanation:

Upgrading from a FlashArray//X to a FlashArray//XL involves a significant architectural change, often requiring a data migration or a specific "chassis replacement" workflow known as a Data-in-Place upgrade where the new chassis temporarily acts as an expansion shelf. In this specific procedure, the new FlashArray//XL chassis is not immediately populated with its final drives (DFMDs) before power-on because it first needs to be configured to accept data or join the cluster in a controlled state.

The procedure requires the Implementation Engineer to boot the FlashArray//XL chassis first and configure it into Shelf Mode (SPM). Only after the chassis is successfully running in this mode—effectively acting as a passive SAS/Ethernet attached shelf to the existing controllers—are the DirectFlash Modules (DFMD) inserted.

Inserting them earlier could cause the array to attempt a full boot sequence or initialize a new array instance, complicating the upgrade logic. By waiting until Shelf Mode is confirmed, the engineer ensures that the modules are recognized correctly as part of the migration target resources, allowing Purity to manage the layout and data redistribution correctly from the source array.

### NEW QUESTION # 153

At the completion of an upgrade, which command is used to send phonehome logs?

- A. purelogs --send-all
- **B. purearray phonehome --send-today**
- C. purearray phonehome --send-logs

**Answer: B**

Explanation:

At the completion of an upgrade, the correct command to manually trigger the upload of the relevant logs is purearray phonehome --send-today.

Purpose: This specific argument (--send-today) instructs the array to bundle and upload all log files generated within the current 24-hour window. This is the standard procedure post-upgrade because it ensures that all logs capturing the pre-upgrade state, the upgrade process itself, and the immediate post-upgrade health checks are transmitted to Pure Support.

Verification: This allows the Support team to validate that the upgrade completed successfully and that no dormant issues were triggered during the controller failovers.

Syntax: Option A (purelogs) is not a valid command. Option B (--send-logs) is a generic approximation, but the specific "today" flag is the best practice command cited in upgrade checklists to avoid uploading gigabytes of historical data irrelevant to the immediate event.

### NEW QUESTION # 154

.....

Just like the saying goes, it is good to learn at another man's cost. In the process of learning, it is more important for all people to have a good command of the method from other people. The Pure Storage Certified FlashArray Implementation Specialist exam questions from our company will help you find the good study method from other people. Using the FlashArray-Implementation-Specialist Test Guide from our company, you can not only pass your exam, but also you will have the chance to learn about the different and suitable study skills. We believe these skills will be very useful for you near life.
