Free PDF Information-Technology-Management - Pass-Sure Updated WGU Information Technology Management QGC1 Test Cram

We boost a professional expert team to undertake the research and the production of our Information-Technology-Management learning file. We employ the senior lecturers and authorized authors who have published the articles about the test to compile and organize the Information-Technology-Management prep guide materials. Our expert team boasts profound industry experiences and they use their precise logic to verify the test. They provide comprehensive explanation and integral details of the answers and questions to help you pass the Information-Technology-Management Exam easily.

WGU Information Technology Management QGC1 Sample Questions (Q87-Q92):

NEW QUESTION # 87

Which characteristic defines Vision in leadership?

- A. Assigning specific roles and responsibilities to employees
- B. Focusing consistently on daily operational tasks
- **C. Establishing goals that promote long-term growth**
- D. Implementing structured financial reporting procedures

Answer: C

Explanation:

Vision in leadership refers to the ability to set long-term goals and provide a clear direction that guides organizational growth and change. Leaders with vision inspire teams to work toward future objectives beyond immediate operational tasks.

Option A: Financial reporting is operational, not visionary.

Option B: Daily task focus reflects management, not vision.

Option C: Assigning roles is administrative, not strategic vision.

Therefore, Vision in leadership is defined as establishing goals that promote long-term growth.

NEW QUESTION # 88

Which management information system manages the flow of goods and materials to ensure production schedules and deliveries are met?

- A. Product design management
- **B. Supply chain management**
- C. Inventory management
- D. Production management

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Supply Chain Management (SCM) systems are designed to manage and coordinate the flow of goods, materials, and information from suppliers through production and distribution to customers. Within an Information Technology Management and MIS context, SCM systems typically support:

Procurement and supplier coordination

Inbound logistics and materials planning

Coordination with production schedules to ensure necessary materials arrive on time Warehousing, inventory in transit, and distribution logistics Delivery tracking and meeting customer delivery dates The key phrase in the question is: "manages the flow of goods and materials to ensure production schedules and deliveries are met." This describes the end-to-end responsibility of supply chain management, which links suppliers, manufacturing, and distribution in a coordinated system.

Why the other options are incorrect:

A . Inventory management - This focuses on stock levels and item counts in warehouses or storage locations. It is an important component, but it does not, by itself, manage the entire flow of goods from suppliers through to deliveries.

B . Production management - This is centered on planning and controlling manufacturing activities on the shop floor, but it does not fully handle external suppliers, transportation, and distribution to customers.

D. Product design management - This relates to designing and engineering products, often involving CAD tools and design workflows, not the operational flow of goods and materials.

Therefore, the correct answer is C. Supply chain management, as SCM systems are specifically responsible for coordinating the movement of goods and materials so that production schedules and deliveries are fulfilled efficiently.

NEW QUESTION # 89

What is a preliminary concern when moving disaster operations to the cloud?

- A. Regulatory challenges in some regions
- B. Backup processes are interrupted
- C. Limited visibility into system performance
- D. Multiple delays in data access during outages

Answer: A

Explanation:

When shifting disaster recovery operations to the cloud, one of the primary concerns is regulatory compliance challenges, especially in industries or regions with strict data sovereignty and privacy laws. Cloud providers may store data across borders, raising compliance issues with regulations such as GDPR or HIPAA.

Option A: Backups are often improved, not interrupted, in the cloud.

Option B: While visibility is important, compliance issues are typically a greater preliminary concern.

Option D: Cloud disaster recovery solutions are designed to minimize data delays, not create them.

Thus, the correct answer is Regulatory challenges in some regions.

NEW QUESTION # 90

What is communications media in a unified communications system?

- A. Signal converter for analog phones
- B. Traditional phone with networking support
- C. Software-based phone that uses VoIP
- D. Mobile conferencing phone-like tool

Answer: C

Explanation:

In a unified communications system, communications media refers to the actual method by which communication takes place. A key example is a software-based phone that uses Voice over Internet Protocol (VoIP), which allows users to make phone calls through the internet instead of relying on traditional analog systems.

Option B: Incorrect-mobile conferencing devices are tools, not the core communications media.

Option C: Incorrect-signal converters are hardware for compatibility, not communications media.

Option D: Incorrect-traditional phones are legacy hardware, not unified digital media.

Thus, communications media in UC systems is represented by a software-based phone using VoIP.

WGU Information Technology Management - Unified Communication Tools, section on VoIP and Communication Media.

NEW QUESTION # 91

Which system provides a foundation for collaboration between departments, enabling people in different business areas to communicate?

- A. Supply chain management (SCM)
- B. Enterprise resource planning (ERP)
- C. Electronic data interchange (EDI)
- D. Customer relationship management (CRM)

Answer: B

NEW QUESTION # 92

.....

Of course, when you are seeking for exam materials, it is certain that you will find many different materials. However, through investigation or personal experience, you will find Pass4guide questions and answers are the best ones for your need. The candidates have not enough time to prepare the exam, while Pass4guide certification training materials are to develop to solve the problem. So, it can save much time for us. What's more important, 100% guarantee to pass WGU Information-Technology-Management Exam at the first attempt. In addition, Pass4guide exam dumps will be updated at any time. If exam outline and the content change, Pass4guide can provide you with the latest information.
