**100% Pass Accurate Amazon - CLF-C02 - AWS Certified Cloud Practitioner Valid Test Voucher**

The AWS Certified Cloud Practitioner (CLF-C02) certification is a valuable credential that every Amazon professional should earn it. The CLF-C02 certification exam offers a great opportunity for beginners and experienced professionals to demonstrate their expertise. With the AWS Certified Cloud Practitioner (CLF-C02) certification exam everyone can upgrade their skills and knowledge. There are other several benefits that the Amazon CLF-C02 exam holders can achieve after the success of the AWS Certified Cloud Practitioner (CLF-C02) certification exam.

## Amazon AWS Certified Cloud Practitioner Sample Questions (Q717-Q722):

### NEW QUESTION # 717

Which AWS service can a company use to visually design and build serverless applications?

- A. AWS Batch
- B. AWS App Runner
- C. AWS Application Composer
- D. AWS Lambda

**Answer: C**

Explanation:

AWS Application Composer is a service that allows users to visually design and build serverless applications.

Users can drag and drop components, such as AWS Lambda functions, Amazon API Gateway endpoints, Amazon DynamoDB tables, and Amazon S3 buckets, to create a serverless application architecture. Users can also configure the properties, permissions, and dependencies of each component, and deploy the application to their AWS account with a few clicks. AWS Application Composer simplifies the design and configuration of serverless applications, and reduces the need to write code or use AWS CloudFormation templates. References: AWS Application Composer, AWS releases Application Composer to make serverless 'easier' but initial scope is limited

### NEW QUESTION # 718

A company is migrating to the AWS Cloud to meet storage needs. The company wants to optimize costs based on the amount of storage that the company uses.

Which AWS offering or benefit will meet these requirements MOST cost-effectively?

- A. AWS Free Tier
- B. Savings Plans
- C. Pay-as-you-go pricing
- D. Volume-based discounts

**Answer: D**

Explanation:

Volume-based discounts are an AWS offering or benefit that can help the company optimize costs based on the amount of storage that the company uses. Volume-based discounts are discounts that AWS provides for some storage services, such as Amazon S3 and Amazon EBS, when the company stores a large amount of data. The more data the company stores, the lower the price per GB. For example, Amazon S3 offers six storage classes, each with a different price per GB. The price per GB decreases as the amount of data stored in each storage class increases

### NEW QUESTION # 719

An ecommerce company has migrated its IT infrastructure from an on-premises data center to the AWS Cloud.

Which cost is the company's direct responsibility?

- A. Cost of power for the AWS servers
- B. Cost of the hardware infrastructure on AWS
- C. Cost of physical security for the AWS data center
- D. Cost of application software licenses

**Answer: D**

Explanation:

Explanation

The cost of application software licenses is the company's direct responsibility when it migrates its IT infrastructure from an on-premises data center to the AWS Cloud. Application software licenses are the agreements that grant users the right to use specific software products, such as operating systems, databases, or applications. Depending on the type and terms of the license, users may need to pay a fee to the software vendor or provider to use the software legally and access its features and updates. When users migrate their IT infrastructure to the AWS Cloud, they can choose to buy new licenses from AWS, bring their own licenses (BYOL), or use a combination of both. However, regardless of the option they choose, they are still responsible for complying with the license terms and paying the license fees to the software vendor or provider. AWS does not charge users for the application software licenses they bring or buy, but only for the AWS resources they use to run their applications. Therefore, the cost of application software licenses is the only cost among the options that is the company's direct responsibility. The other costs are either included in the AWS service fees or covered by AWS.

### NEW QUESTION # 720

A company wants to create a globally accessible ecommerce platform for its customers. The company wants to use a highly available and scalable DNS web service to connect users to the platform.

Which AWS service will meet these requirements?

- A. Amazon VPC
- **B. Amazon Route 53**
- C. Amazon EC2
- D. Amazon RDS

**Answer: B**

Explanation:

Amazon Route 53 is a highly available and scalable Domain Name System (DNS) web service that can route internet traffic to the company's ecommerce platform<sup>1</sup>. Route 53 can also register domain names, check the health of resources, and provide global DNS features<sup>2</sup>. Route 53 can connect users to the platform by translating human-readable names like `www.example.com` into the numeric IP addresses that computers use to communicate with each other<sup>2</sup>. References: 1: Amazon Route 53 | DNS Service | AWS; 2: What is Amazon Route 53? - Amazon Route 53

### NEW QUESTION # 721

A company wants to host its relational databases on AWS. The databases have predefined schemas that the company needs to replicate on AWS.

Which AWS services could the company use for the databases? (Select TWO.)

- A. Amazon DocumentDB (with MongoDB compatibility)
- B. Amazon DynamoDB
- C. Amazon Neptune
- **D. Amazon Aurora**
- **E. Amazon RDS**

**Answer: D,E**

Explanation:

The correct answers are A and B because Amazon Aurora and Amazon RDS are AWS services that the company could use for the relational databases. Amazon Aurora is a relational database that is compatible with MySQL and PostgreSQL. Amazon Aurora is a fully managed, scalable, and high-performance service that offers up to five times the throughput of standard MySQL and up to three times the throughput of standard PostgreSQL. Amazon RDS is a service that enables users to set up, operate, and scale relational databases in the cloud. Amazon RDS supports six popular database engines: MySQL, PostgreSQL, Oracle, SQL Server, MariaDB, and Amazon Aurora. The other options are incorrect because they are not AWS services that the company could use for the relational databases. Amazon DocumentDB (with MongoDB compatibility) is a document database that is compatible with MongoDB. Amazon Neptune is a graph database that supports property graph and RDF models. Amazon DynamoDB is a key-value and document database.

Reference: Amazon Aurora, Amazon RDS

## NEW QUESTION # 722

.....

On the basis of the current social background and development prospect, the CLF-C02 certifications have gradually become accepted prerequisites to stand out the most in the workplace. But it is not easy for every one to achieve their CLF-C02 certification since the CLF-C02 Exam is quite difficult and takes time to prepare for it. Our CLF-C02 exam materials are pleased to serve you as such an exam tool to win the exam at your first attempt. If you don't believe it, just come and try!
