Therefore, our practice materials can help you get a great financial return in the future and you will have a good quality of life.

## Salesforce Certified B2C Commerce Architect Sample Questions (Q27-Q32):

### NEW QUESTION # 27

A developer is checking for Cross Site Scripting (XSS) and found that the quick search is not escaped (allows inclusion of Javascript) in the following script:

How would the developer resolve this issue?

- A. Replace ' with double Quote\*
- B. Use <isprint value="\$ {searchPhrase} encoding-'jsblock" />
- **C. Use <isprint value="\$ {searchPhrase}\* encoding-'jshtmr" />**
- D. Use <toprint value="\$ {searchPhrase}" />

**Answer: C**

Explanation:

To resolve the issue of Cross Site Scripting (XSS) where the quick search is not escaped, the developer should use the <isprint> tag with the 'jshtml' encoding option (Answer B). This method ensures that any JavaScript included in the search phrase is properly escaped, preventing the execution of potentially malicious scripts.

The 'jshtml' encoding is specifically designed to encode text for HTML contexts where JavaScript is embedded, providing a secure way to handle user input in Salesforce B2C Commerce.

### NEW QUESTION # 28

Northern Trail Outfitters (NTO) wants to migrate its online shoo from a custom ecommerce platform to B2C Commerce. NTO needs to migrate several thousands of customer records profile information, address book).

WTO can provide a B2C Commerce feed. It is currently using SHA-256 as an encryption mechanism for the customer passwords. What approach can the Architect propose?

- A. Import the customer records, excluding the password field, and B2C Commerce will automatically require a password reset the first time a customer logs in to the storefront.
- B. Import the customer records, including the hashed password, as B2C Commerce supports SHA-2S6, and they will be able to login with their existing password.
- **C. Import the customer records, with the hashed password as a custom attribute, and during the login compare the entered password with the hashed password and save it in the password field.**
- D. Do not import customer records and asks customers to create new accounts the first fame they try to log in to the B2C Commerce storefront.

**Answer: C**

### NEW QUESTION # 29

During a technical review, the Client raises a need to display product pricing on theProduct Detail Page (PDP) with discounted values per promotion. The Client notes customers complained of bad user experiences in the past when they would add a product to the basket from the cached PDP and then see a higher price when they started checkouts as the promotion had expired.

What should the Architect suggest be implemented for this given that performance should be minimally impact?

- A. Create a separate template or view based on the promotion.
- B. Adjust the PDP to have a low caching period during the promotion.
- C. Remove caching of the product page during the promotion.
- **D. Modify the page to vary the cache by price and promotion.**

**Answer: D**

Explanation:

To address the issue of pricing discrepancies on the Product Detail Page (PDP) due to promotions expiring between the page view

and checkout, the Architect should suggest modifying the page cache to vary by price and promotion (Answer C). This solution allows the cache to store different versions of the page based on the current price and applicable promotions. By doing so, it ensures that customers always see the most accurate pricing information depending on the active promotions at the time of their visit, thereby improving the user experience and reducing confusion at checkout. This method also minimizes the performance impact compared to completely disabling cache, as it still allows caching but in a more dynamically controlled manner.

#### NEW QUESTION # 30

During load testing, a third party service is constantly failing to respond in a timely manner on the Product Listing Page. The page is not affected at it is collecting data with the server side call, however the loading time is increasing.

Which two recommendations should the developer take in order to minimize the risk and Improve the loading time?

Choose 2 answers

- A. Enable the Circuit Breaker.
- B. Decrease the service timeout.
- C. Ask the third party to improve the reliability of the service.
- D. Load the data asynchronously after the page is loaded
- E. Remove the service.

**Answer: A,D**

Explanation:

In scenarios where a third-party service impacts page performance, implementing a Circuit Breaker pattern (Option C) can prevent the service from becoming a bottleneck. This pattern helps manage failing service calls by temporarily disabling the service interaction when failures reach a certain threshold, allowing it to recover. Asynchronously loading the data (Option E) ensures the page's primary content loads without delay, while data from the third-party service is fetched in the background, improving the user's perceived performance and page load times.

#### NEW QUESTION # 31

A new version of the Page Show controller is required for implementation of Page Deserter specific look. It requires implementation of a specific, cache period for Page Designer pages, which is not currently available in the base Storefront Reference Architecture (SFRA) cache.js module. What two steps should the Architect instruct the developer to implement?

Choose 2 answers

- A. Create new cache.js in client's cartridge. Extend cache.js from app\_storefront\_base and add a function for the Page Designer caching.
- B. Create new cache.js in client's cartridge. Copy cache.js from app\_storefront\_base and add a function for the Page Designer caching.
- C. Create new Page.js controller in client's cartridge. Extend the code from base and prepend the new cache middleware function to Page-Show route.
- D. Create new Page.js controller in client's cartridge. Copy code from base and modify the Page-Show route to include the new cache middleware function.

**Answer: A,C**

#### NEW QUESTION # 32

.....
