Slack-Dev-201 Reliable Test Questions | Exam Slack-Dev-201 Fees

The customer is God. Slack-Dev-201 learning dumps provide all customers with high quality after-sales service. After your payment is successful, we will dispatch a dedicated IT staff to provide online remote assistance for you to solve problems in the process of download and installation. During your studies, Slack-Dev-201 study tool will provide you with efficient 24-hour online services. You can email us anytime, anywhere to ask any questions you have about our Slack-Dev-201 Study Tool. At the same time, our industry experts will continue to update and supplement Slack-Dev-201 test question according to changes in the exam outline, so that you can concentrate on completing the review of all exam content without having to pay attention to changes in the outside world.

Salesforce Certified Slack Developer Sample Questions (Q181-Q186):

NEW QUESTION # 181

In developing a Slack app that handles sensitive user information, what is an essential security practice to prevent unauthorized data exposure?

- A. Rely solely on Slack's built-in security features for data protection
- B. Store sensitive user information in public channels for easy access by the app
- C. Limit access to sensitive data to only those components of the app that require it
- D. Use simple, easily memorable passwords for encrypting sensitive data

Answer: C

Explanation:

Limit access to sensitive data to only those components of the app that require it. Limiting access to sensitive data to only the necessary components of the app is a crucial security practice. This principle of least privilege ensures that exposure of sensitive data is minimized and is accessible only where absolutely required.

Why not the other options:

*Storing sensitive information in public channels poses a high risk of unauthorized access.

*While Slack's built-in security features are robust, relying solely on them without additional security measures might not be sufficient for sensitive data.

*Using simple passwords for encryption undermines the security of sensitive data, making it vulnerable to unauthorized access.

NEW QUESTION # 182

A company wants to create a Slack app that allows employees to quickly check their leave balance.

Which feature would be most appropriate for this functionality?

- A. Use slash commands that allow employees to check their leave balance on demand
- B. Develop a bot that sends leave balance updates at regular intervals
- C. Post leave balances periodically in a common HR channel
- D. Implement an App Home tab where leave balances are displayed continuously

Answer: A

Explanation:

Use slash commands that allow employees to check their leave balance on demand. Slash commands are ideal for providing users with the ability to retrieve specific information like leave balances on demand. This approach offers privacy and immediacy, allowing employees to get their leave balance information whenever they need it without waiting for updates.

Why not the other options:

*Regular intervals may not align with when employees want to check their balance.

*It requires navigating away from the user's current workspace, which might be less convenient for quick checks.

*Posting leave balances in a common channel lacks privacy and can lead to information overload.

NEW QUESTION # 183

In which of the following scenarios would using the Slack Audit Logs API be most appropriate?

- A. To enhance the aesthetic appeal of Slack channels with customized themes and layouts
- B. For monitoring and documenting the installation and removal of apps and integrations within the workspace for security audits
- C. When needing a tool to evaluate and improve team engagement and collaboration within Slack channels
- D. To develop custom notification systems within Slack based on user activity patterns

Answer: B

Explanation:

For monitoring and documenting the installation and removal of apps and integrations within the workspace for security audits. The Audit Logs API is an ideal tool for monitoring and documenting the installation and removal of apps and integrations within a Slack workspace, especially for security audits. It helps in ensuring that the workspace remains secure and that all changes to integrations are properly tracked and reviewed.

Why not the other options:

*The Audit Logs API is not intended for customizing the appearance of Slack channels.

*It does not specialize in evaluating team engagement and collaboration.

*The API is not designed for developing custom notification systems based on user activities.

NEW QUESTION # 184

A marketing team uses Slack for collaboration and wants to automate the process of sharing social media analytics within their workspace.

How can this be best achieved?

- A. Manually post social media analytics in a dedicated Slack channel

- B. Develop a custom Slack app that automatically posts these analytics
- C. Encourage team members to check the analytics platform individually
- D. Use email notifications to share social media analytics with team members

Answer: B

Explanation:

Develop a custom Slack app that automatically posts these analytics Developing a custom Slack app that automatically retrieves and posts social media analytics in a Slack channel is the most efficient way to automate this process. It ensures timely and consistent updates without manual intervention.

Why not the other options:

*Manual posting is time-consuming and prone to inconsistencies.

*Email notifications are outside the Slack workspace and do not automate the process within Slack.

*It requires individual effort and does not leverage the collaborative environment of Slack.

NEW QUESTION # 185

In which scenario should a developer consider sharing their Slack app with other workspaces?

- A. For an app that integrates deeply with the organization-specific internal databases and systems
- B. When the app is developed to comply with the specific regulatory requirements of a particular industry sector
- C. When the app contains proprietary information specific to one company's internal operations
- D. If the app is designed to be a universal tool for tasks such as scheduling, project management, or team communication

Answer: D

Explanation:

If the app is designed to be a universal tool for tasks such as scheduling, project management, or team communication Sharing an app with other workspaces is appropriate if the app is designed as a universal tool for common tasks like scheduling, project management, or team communication. This ensures that the app is beneficial to a wide range of users, extending its usefulness across different organizational contexts.

Why not the other options:

*Apps with proprietary information specific to one company are not typically suited for broader distribution.

*Apps deeply integrated with organization-specific systems are likely not applicable to other workspaces.

*Apps developed to comply with specific industry regulations may not be relevant or applicable to other sectors or workspaces.

NEW QUESTION # 186
