The ARX preserves existing client presentation and data attributes such as server names, links, Object links, UNC paths, and solutions

The ARX uses standard CIFS and NFS protocols for tiering, and does not required a propriatetary API. This allows ARX tiering to works across multiple vendors and protocols

The ARX does not modify any of the backend data and does not use links or stubs. The ARX migrates files transparently and preserves all attributes as well as the original parent directory structure.
