## MSSC Certified Logistics Technician (CLT) 4.0 Sample Questions (Q36-Q41):

### NEW QUESTION # 36

Facilities that store HAZMATs must do all of the following EXCEPT

- A. notify OSHA of the storage locations
- B. use the proper PPE when handling
- C. post a Safety Data Sheet (SDS) in the area
- D. clearly mark where HAZMATs are stored

**Answer: A**

Explanation:

MSSC CLT states that storage areas for hazardous materials must be clearly labeled, have accessible SDS (or a binder nearby), and enforce use of proper PPE when handling. There is no requirement under OSHA or DOT to notify OSHA of the exact storage locations of nonbulk hazmat-such notification is not standard in CLT training. The facility must provide access to hazard communication and train employees, but not a specific "notify OSHA of storage." Reference:

#### NEW QUESTION # 37

Damages must be accounted for

- A. before final inspection
- B. before a delivery vehicle is released
- C. after the driver has left the facility
- D. after adding to inventory

**Answer: B**

Explanation:

CLT receiving controls call for identifying and documenting damages at the dock, before accepting the load and releasing the carrier. This ensures that responsibility is clear, carrier paperwork reflects exceptions, and claims can be initiated with proper evidence (photos, notes, seal status). Posting damaged items to inventory first compromises accuracy and complicates claims; waiting until after driver departure removes a key witness and may violate carrier requirements for noting exceptions at delivery. The correct sequence is: verify against documents, inspect for condition/quantity, record exceptions, and only then proceed to acceptance/vehicle release. This process protects financial recovery and maintains clean inventory records.

#### NEW QUESTION # 38

Which of the following is the common name for wood containers used to provide a structure that enables material handlers to grasp and move items while providing a degree of protection at the same time?

- A. drums
- B. wire mesh containers
- C. pallets
- D. crates

**Answer: C**

Explanation:

The pallet is the most widely used base platform in logistics, described in the CLT "Product Storage" module as a load-handling unit that provides both structure and protection for materials during handling, storage, and transport. Typically made of wood (though plastic and metal versions exist), pallets allow forklifts and pallet jacks to easily lift and move unitized loads. Their standardized dimensions (such as the 48x40-inch GMA pallet) ensure compatibility with racking systems and automated equipment. Unlike crates, pallets are open-structured, facilitating efficient storage and airflow. The CLT curriculum emphasizes the use of pallets to improve safety, reduce handling time, and protect goods from damage through secure strapping or stretch-wrapping. Proper palletization reduces manual lifting, streamlines workflow, and maintains load stability-critical for warehouse efficiency and safety compliance.

#### NEW QUESTION # 39

Which inventory counting method is associated with the ABC inventory control method?

- A. wall-to-wall physical count
- B. cycle count
- C. demand count

- D. random count

**Answer: B**

Explanation:

The cycle count method is directly tied to ABC inventory control, where inventory items are classified based on value and turnover rate. CLT "Inventory Control" principles state that A-class items (high value or high usage) are counted most frequently, while B and C items are checked less often. This approach maintains high accuracy where it matters most while reducing unnecessary labor. Unlike wall-to-wall counts, cycle counting allows continuous verification without halting operations. The CLT framework teaches that successful cycle counting relies on well-organized locations, accurate labeling, and WMS integration. By combining ABC classification and cycle counting, organizations achieve precise inventory management and maintain data integrity across the supply chain.

#### NEW QUESTION # 40

A list of items in a vehicle's cargo is

- A. Dock Receipt
- **B. Manifest**
- C. Delivery Receipt
- D. Picking List

**Answer: B**

Explanation:

In logistics operations, a manifest serves as the master list of all cargo items loaded onto a vehicle, container, aircraft, or vessel. According to CLT 4.0, it details shipment identifiers, consignee addresses, weights, cube measurements, and associated documentation like bills of lading or invoices. The manifest ensures accountability and traceability from origin to destination by allowing carriers and receivers to cross-check cargo content against documentation. It is used in dispatch and tracking to confirm that the correct freight has been loaded and helps prevent mis-shipments or loss. Unlike a picking list, which is used in order fulfillment within the warehouse, the manifest is used for transportation verification. The manifest also plays a regulatory role, especially for hazardous materials or international cargo, where customs and compliance verification depend on its accuracy.
