- 1) A company is storing an access key (access key ID and secret access key) in a text file on a custom AMI. The company uses the access key to access DynamoDB tables from instances created from the AMI. The security team has mandated a more secure solution.
Which solution will meet the security team's mandate?
 - A. Put the access key in an S3 bucket, and retrieve the access key on boot from the instance.
 - B. Pass the access key to the instances through instance user data.
 - C. Obtain the access key from a key server launched in a private subnet.
 - D. Create an IAM role with permissions to access the table, and launch all instances with the new role.

- 2) A company is developing a highly available web application using stateless web servers. Which services are suitable for storing session state data? (Select TWO.)
 - A. CloudWatch
 - B. DynamoDB
 - C. Elastic Load Balancing
 - D. ElastiCache
 - E. Storage Gateway

- 3) Company salespeople upload their sales figures daily. A Solutions Architect needs a durable storage solution for these documents that also protects against users accidentally deleting important documents.
Which action will protect against unintended user actions?
 - A. Store data in an EBS volume and create snapshots once a week.
 - B. Store data in an S3 bucket and enable versioning.
 - C. Store data in two S3 buckets in different AWS regions.
 - D. Store data on EC2 instance storage.

- 4) An application requires a highly available relational database with an initial storage capacity of 8 TB. The database will grow by 8 GB every day. To support expected traffic, at least eight read replicas will be required to handle database reads.
Which option will meet these requirements?
 - A. DynamoDB
 - B. Amazon S3
 - C. Amazon Aurora
 - D. Amazon Redshift

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q51-Q56):

NEW QUESTION # 51

You are signed in as root user on your account but there is an Amazon S3 bucket under your account that you cannot access. What is a possible reason for this?

- A. An IAM user assigned a bucket policy to an Amazon S3 bucket and didn't specify the root user as a principal
- B. You are in the wrong availability zone
- C. The S3 bucket has reached the maximum number of objects allowed.
- D. The S3 bucket is full.

Answer: A

Explanation:

With IAM, you can centrally manage users, security credentials such as access keys, and permissions that control which AWS resources users can access.

In some cases, you might have an IAM user with full access to IAM and Amazon S3. If the IAM user assigns a bucket policy to an Amazon S3 bucket and doesn't specify the root user as a principal, the root user is denied access to that bucket. However, as the root user, you can still access the bucket by modifying the bucket policy to allow root user access.

NEW QUESTION # 52

Amazon RDS creates an SSL certificate and installs the certificate on the DB Instance when Amazon RDS provisions the instance. These certificates are signed by a certificate authority. The _____ is stored at <https://rds.amazonaws.com/doc/rds-ssl-ca-cert.pem>

- A. foreign key
- B. protected key
- C. private key
- D. public key

Answer: D

NEW QUESTION # 53

A company needs to retain its AWS CloudTrail logs for 3 years. The company is enforcing CloudTrail across a set of AWS accounts by using AWS Organizations from the parent account. The CloudTrail target S3 bucket is configured with S3 Versioning enabled. An S3 Lifecycle policy is in place to delete current objects after 3 years.

After the fourth year of use of the S3 bucket, the S3 bucket metrics show that the number of objects has continued to rise.

However, the number of new CloudTrail logs that are delivered to the S3 bucket has remained consistent.

Which solution will delete objects that are older than 3 years in the MOST cost-effective manner?

- A. Create an AWS Lambda function to enumerate and delete objects from Amazon S3 that are older than 3 years.
- B. Configure the parent account as the owner of all objects that are delivered to the S3 bucket.
- C. Configure the organization's centralized CloudTrail trail to expire objects after 3 years.
- D. Configure the S3 Lifecycle policy to delete previous versions as well as current versions.

Answer: D

NEW QUESTION # 54

You need a persistent and durable storage to trace call activity of an IVR (Interactive Voice Response) system. Call duration is mostly in the 2-3 minutes timeframe. Each traced call can be either active or terminated. An external application needs to know each minute the list of currently active calls, which are usually a few calls/second. Put once per month there is a periodic peak up to 1000 calls/second for a few hours. The system is open 24/7 and any downtime should be avoided. Historical data is periodically archived to files. Cost saving is a priority for this project.

What database implementation would better fit this scenario, keeping costs as low as possible?

- A. Use RDS Multi-AZ with a "CALLS" table and an Indexed "STATE*" field that can be equal to "ACTIVE" or "TERMINATED" In this way the SOL query is optimized by the use of the Index.
- **B. Use DynamoDB with a "Calls" table and a Global Secondary Index on a "IsActive" attribute that is present for active calls only. In this way the Global Secondary index is sparse and more effective.**
- C. Use RDS Multi-AZ with two tables, one for "Active calls" and one for "Terminated calls". In this way the "Active calls" table is always small and effective to access.
- D. Use DynamoDB with a "Calls" table and a Global secondary index on a "State" attribute that can equal to "active" or "terminated" in this way the Global Secondary index can be used for all Items in the table.

Answer: B

NEW QUESTION # 55

When creation of an EBS snapshot is initiated, but not completed, the EBS volume:

- A. Can be used in read-only mode while the snapshot is in progress
- **B. Can be used while the snapshot is in progress**
- C. Cannot be detached or attached to an EC2 instance until the snapshot completes
- D. Cannot be used until the snapshot completes

Answer: B
