

# Drupal-Site-Builder Fragen & Antworten & Drupal-Site-Builder Studienführer & Drupal-Site-Builder Prüfungsvorbereitung

Die Forschungsmaterialien haben gezeigt, dass es schwierig ist, die Acquia Drupal-Site-Builder Zertifizierungsprüfung zu bestehen. Unser ITZert hat erfahrungsreiche IT-Experten, die durch harte Arbeit die neuesten Schulungsunterlagen zur Acquia Drupal-Site-Builder Zertifizierungsprüfung bearbeitet haben. Unser ITZert hat die besten Ressourcen, die Ihnen beim Bestehen der Acquia Drupal-Site-Builder Prüfung helfen. Sie enthalten sowohl Fragen, als auch Antworten. Sie brauchen sich nicht so viel Mühe dafür auszugeben und können trotzdem eine hohe Note in der Prüfung bekommen. Wählen Sie doch die Schulungsunterlagen zur Acquia Drupal-Site-Builder Zertifizierungsprüfung, die Ihnen sehr helfen können.

Viele IT-Fachleute träumt von dem Acquia Drupal-Site-Builder Zertifikat. Die Acquia Drupal-Site-Builder Zertifizierungsprüfung ist eine Prüfung, die IT-Fachkenntnisse und Erfahrungen eines Menschen testet. Um die Prüfung zu bestehen braucht man genügend Fachkenntnisse. Um diese Kenntnisse zu meistern muss man viel Zeit und Energie kosten. ITZert ist eine Website, die Ihnen viel Zeit und Energie erspart und die relevanten Kenntnisse zur Acquia Drupal-Site-Builder Zertifizierungsprüfung ergänzt. Wenn Sie Interesse an ITZert haben, können Sie im Internet teilweise die Fragen und Antworten zur Acquia Drupal-Site-Builder Zertifizierungsprüfung von ITZert kostenlos als Probe herunterladen.

## Drupal-Site-Builder PDF Testsoftware, Drupal-Site-Builder Deutsch Prüfungsfragen

Wollen Sie die Fragenkataloge zur Acquia Drupal-Site-Builder Zertifizierungsprüfung haben, die Ihre Zeit und Energie sparen können? Dann wählen Sie ITZert. Unsere Fragenkataloge für Acquia Drupal-Site-Builder Zertifizierungsprüfung werden Ihnen einjähriger Aktualisierung kostenlos bieten, damit Sie die neulich aktualisierten Informationen über Acquia Drupal-Site-Builder Zertifizierungsprüfung erhalten können. Wir versprechen Ihnen, dass wir Ihnen alle Ihre bezahlten Summe zurückgeben werden, wenn Sie die Zertifizierungsprüfung nicht bestehen, nachdem Sie unsere Produkte gekauft haben.

## Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Drupal-Site-Builder Prüfungsfragen mit Lösungen (Q49-Q54):

### 49. Frage

You are building a recipe site in which users submit their favorite recipes as nodes, tagged with common ingredients from a carefully curated taxonomy vocabulary. You've been asked to create a page on which site visitors can select the ingredients they have on hand and view all the site's recipes that use those ingredients.

You've already created a view listing all Recipe nodes.

How can you modify the view to support filtering by ingredient?

- A. Add a menu block listing all ingredients. Each item in the menu block should link to a subdirectory URL associated with the listed ingredient.

- B. For each ingredient, create a separate view display with a contextual filter to limit results by that ingredient.
- C. Include a "Combine fields" filter that searches all fields for the ingredient name(s) the user enters.
- D. Create a filter using the Recipe content type's "Ingredients" field. Expose the filter to users, making sure it allows multiple selections.

**Antwort: D**

Begründung:

Drupal's recommended way to let visitors narrow a Views listing by a field value is to add that field as a filter criterion and then expose the filter to site visitors. The core Views documentation explains that filters can be exposed so users can interact with the data shown in the view, instead of hard-coding separate displays or relying on free-text searching.

This question specifically says the recipes are tagged with a curated taxonomy vocabulary of ingredients.

Drupal's User Guide uses Ingredients as an example of a field that should be a taxonomy term reference, because the allowed values come from a managed list that can grow over time. That means the correct filter is the Recipe content type's Ingredients taxonomy-reference field in the View. Since visitors should be able to choose the ingredients they have on hand, the exposed filter should allow multiple selections.

The other options are not the standard Drupal site-building solution. Separate displays per ingredient do not scale, a combined-text search is not a structured taxonomy filter, and a menu block is navigation rather than a proper Views filter.

### 50. Frage

You have created a custom block "Festival Offer" and placed this block in the header section of your site.

Your site has a "Premium customer" user role. You need to show this block only on the front page and only to users who have a "Premium customer" user role.

Which two visibility settings you need to make to the "Festival Offer" block to achieve these requirements?

- A. Add < front > path in the Pages tab and select "Show for the listed pages".
- B. Select the user role "Authenticated user" from the Roles tab.
- C. Select the user role "Premium customer" from the Roles tab.
- D. Remove < front > path in the Pages tab & select "Hide for the listed pages".

**Antwort: A,C**

Begründung:

Drupal 10 and Drupal 11 let you control block display through visibility conditions on the block configuration form. Drupal's block management documentation explains that a block's visibility can depend on page-specific visibility settings and also on user role conditions. For page visibility, Drupal specifically notes that the front page is an exception and must be entered as < front >. To show a block only on the homepage, you add < front > in the Pages visibility settings and choose "Show for the listed pages." To limit the block to a specific audience, you use the Roles visibility condition and select the exact role that should see the block. In this case, that is Premium customer, not the broader Authenticated user role, because selecting Authenticated user would show the block to all logged-in users who have that role, not just premium customers. Drupal core's block form API also confirms that block visibility is built through configurable visibility conditions in the block UI.

So the correct combination is:

A for the role restriction, and B for the front-page-only restriction.

### 51. Frage

Your site has three Content types with a Media reference field. The field is configured to Media type as Image. You noticed that some users are adding animated GIF files while adding the content, which are very distracting.

How can you disallow adding files with .gif extension on all the Content types which use the Media reference field?

- A. Edit the Content types and update Media field settings in Manage form display tab.
- B. Edit the Content types and disallow .gif extension in the Media reference field settings.
- C. Edit the Media type Image and update media type settings to disallow .gif files.
- D. Edit the Media type Image and remove gif from "image" field settings in the Manage fields tab.

**Antwort: D**

### 52. Frage

You run a site that attracts almost all of its users from France, even though you created the site in Australia. A number of users have started complaining that content publication times do not match their local time.

Which two solutions allow users to view content in their local timezone?

- A. Configure the content types to use France's timezone by default
- **B. Alter the default timezone to that of your target audience**
- **C. Check the "Users may set their own time zone" option in the Regional settings menu**
- D. Set the default country to France

**Antwort: B,C**

Begründung:

Drupal handles date and time display through regional settings and user account timezone preferences, not through content type configuration. The correct solutions are therefore A and C. Enabling "Users may set their own time zone" allows authenticated users to choose their own timezone in their user account settings, so dates such as content publication times are displayed according to each user's local timezone. This is the most accurate solution when users may come from different regions.

Changing the default timezone to that of your primary audience, in this case France, is also correct. Drupal uses the site default timezone for users who have not set a personal timezone, and for anonymous visitors.

This makes displayed times more appropriate for the majority of site visitors.

Option B is incorrect because Drupal does not provide timezone handling at the content type level. Timezone behavior is managed globally and per user, not per content type. Option D is also incorrect because setting the default country affects address-related defaults and locale-related behavior, but it does not control how Drupal displays timestamps. Therefore, the verified answers are A and C.

### 53. Frage

You are building a bi-lingual site which is in English and Spanish. You have created all the English content.

How will you add Spanish translation to existing content?

- A. Download the Spanish .po files from [localize.drupal.org](http://localize.drupal.org). Import the .po file.
- **B. On the Translate tab of each node, add Spanish translations manually.**
- C. On Admin > Translate page, enable the Add Google Translations checkbox to import all Spanish translations.
- D. On the Content overview page, select all English content. Check "Import Translations" from the Bulk Actions dropdown.

**Antwort: B**

Begründung:

In Drupal 10 and Drupal 11, content translation is handled through the Content Translation module, which allows you to translate individual content entities (such as nodes). Once multilingual support is enabled and a new language (Spanish) is added, each piece of content provides a Translate tab where translations can be created and managed.

Drupal's User Guide explains that to translate existing content, you navigate to the content item and use the Translate tab to add a translation in the desired language. This process allows editors to manually enter translated content for each field, ensuring accuracy and proper localization.

Option B is incorrect because Drupal core does not provide automatic Google translation import functionality.

Option C refers to interface translation (.po files), which is used for translating the Drupal UI, not site content.

Option D is incorrect because Drupal does not provide a bulk "Import Translations" action for node content in this manner.

Therefore, the correct and documented approach is to manually add translations via the Translate tab for each content item, making A the correct answer.
