## Updated EAEP2201 Practice Exam Questions

Easy4Engine Esri EAEP2201 exam information is proven. We can provide the questions based on extensive research and experience. Easy4Engine has more than 10 years experience in IT certification EAEP2201 exam training, including questions and answers. On the Internet, you can find a variety of training tools. Easy4Engine EAEP2201 Exam Questions And Answers is the best training materials. We offer the most comprehensive verification questions and answers, you can also get a year of free updates.

The EAEP2201 exam is a challenging certification program that requires a significant amount of preparation and dedication. EAEP2201 exam covers a wide range of topics and requires the candidate to have a deep understanding of GIS administration and management. EAEP2201 Exam consists of 100 multiple-choice questions and is timed for 120 minutes. The passing score for the exam is 75%.

## Esri Enterprise Administration Professional 2201 Sample Questions (Q43-Q48):

### NEW QUESTION # 43

A GIS administrator publishes a feature service that references user-managed data. The administrator wants users to add new features. Users should not make changes to attributes of existing features or delete features.

Which feature service operations should be set?

- A. Create and query
- B. Update and sync
- C. Extract and create

**Answer: A**

Explanation:

To allow users to add new features without the ability to modify or delete existing ones, the feature service should have the "Create" and "Query" operations enabled. The "Create" operation permits users to add new features, while the "Query" operation allows them to view existing features. By not enabling the "Update" and

"Delete" operations, users are restricted from making changes to or removing existing features. This configuration is ideal for workflows where data integrity is crucial, and only the addition of new data is permitted.

Enabling "Update and sync" (Option A) would allow users to modify existing features and synchronize changes, which is not desired in this scenario. "Extract and create" (Option C) is not a standard combination of operations for controlling editing permissions in feature services.

Reference Source: ArcGIS Server documentation on editor permissions for feature services

### NEW QUESTION # 44

An organization experiences a temporary loss of service for its ArcGIS Enterprise deployment due to expired licenses.

What should the administrator have done to prevent this issue?

- A. Create a Python script to run an administrative report and schedule the script to run regularly
- B. Design an information banner to automatically display the license expiration date
- C. Use the license file in read-only mode to extend the license
- D. Configure the ArcGIS Enterprise portal to send an automated email when the portal license is expiring

**Answer: A**

Explanation:

ArcGIS Enterprise doesn't currently offer automated license expiration email alerts. However, administrators can use administrative scripts to query license status and generate reports that can be automated using task schedulers (e.g., Windows Task Scheduler).

From Esri guidance:

"Administrators can monitor license status using the ArcGIS REST API or scripting tools. Automating these checks allows timely action before licenses expire."

\* Option A is not a native capability of the portal.

\* Option C is not tied to licensing and is only useful as a passive alert.

\* Option D is not a valid license management option.

Reference: ArcGIS Enterprise - Managing License Expiry and Automating Admin Reports

### NEW QUESTION # 45

A client wants to perform incremental webgisdr backups daily and full backups weekly. They store all data in the relational ArcGIS Data Store, with no tile or map caches.

Which action is required to enable incremental backups?

- A. Enable point-in-time recovery on ArcGIS Data Store

- B. Decrease the max connections during backups
- C. Increase the heap size of ArcGIS Data Store

**Answer: A**

Explanation:

To perform incremental backups using the webgisdr tool, point-in-time recovery must be enabled on the relational data store. This creates transaction logs needed for differential backups and aligns with best practices for enterprise-level backup strategies.

From Esri documentation:

"Incremental backups can only be used with a relational data store when point-in-time recovery is enabled.

This enables transaction log capture needed for delta backups."

\* Option A is unrelated to backup functionality.

\* Option C is not required unless performance tuning is needed.

Reference: ArcGIS Enterprise - Enabling Point-in-Time Recovery in ArcGIS Data Store for Incremental Backups

#### NEW QUESTION # 46

A user must create groups, edit features, and create web apps. This user will also create print layouts, charts, and animations using ArcGIS Pro. The organization has no additional add-on licenses.

Which user type should be configured for this user?

- A. Creator
- **B. GIS Professional**
- C. Editor

**Answer: B**

Explanation:

The GIS Professional user type includes access to ArcGIS Pro, which is required for creating print layouts, charts, animations, and conducting advanced analysis. It also includes capabilities such as creating groups, editing features, and creating web apps within the ArcGIS Enterprise portal without needing additional add-on licenses.

The Creator user type supports most web GIS tasks but does not include ArcGIS Pro unless an add-on license is assigned.

The Editor user type is the most limited and is intended for editing existing content only, not for creating or managing groups or web applications.

Reference Source: ArcGIS Enterprise documentation - User types, capabilities, and included applications

#### NEW QUESTION # 47

An organization expects a large influx of users who use the standard analysis tools in the portal Map Viewer.

The organization is concerned with the hosting server's available resources.

Which system resource should be closely monitored?

- **A. CPU utilization**
- B. Network utilization
- C. Disk activity

**Answer: A**

Explanation:

When users perform standard analysis tasks in the portal Map Viewer, the hosting server executes geoprocessing operations that are computationally intensive. These operations require significant CPU resources. Monitoring CPU utilization helps ensure that the server can handle the increased load without performance degradation.

While disk activity and network utilization are important, they are less directly impacted by standard analysis tasks compared to CPU usage. Therefore, CPU utilization is the primary resource to monitor in this scenario.

Reference Source: ArcGIS Enterprise documentation on system performance monitoring.

#### NEW QUESTION # 48

.....

Perhaps it was because of the work that there was not enough time to learn, or because the lack of the right method of learning led

to a lot of time still failing to pass the EAEP2201 examination. Whether you are the first or the second or even more taking EAEP2201 examination, our EAEP2201 exam prep not only can help you to save much time and energy but also can help you pass the exam. In the other words, passing the exam once will no longer be a dream.
