Which mitigation strategy must the security team implement to prevent similar occurrences in the future?

- A. data loss prevention strategy
- **B. targeted education campaign**
- C. upstream traffic filter
- D. granular port security strategy

**NEW QUESTION # 61**

A company published software that had a security vulnerability, and an attacker used the vulnerability to steal critical information from the environment. The issue was reported by the security team, and the administrator was instructed to run shift-left security tests before publishing the software. Which component of the software development pipeline must be recommended to run the tests?

- A. software bill of material analysis

## NEW QUESTION # 62

An oil and gas company recently faced a security breach when an employee's notepad, which contained critical login credentials, was stolen. The incident led to unauthorized access to a user account, which posed a significant risk to sensitive company data and operations. - A. Implement MFA
- B. Configure a password expiration policy.
- C. Implement single sign-on.
- D. Update the RADIUS server.
