- A. All would work equally well
- B. Supervised Learning
- C. Reinforcement Learning
- D. Reinforcement Learning is defined in CPMAI as the paradigm where agents learn optimal actions via interactions labeled

by reward/punishment signals-essentially a "trial and error" process. Domain III of the CPMAI Exam Content Outline covers "Design reinforcement learning approaches with appropriate agents and environments," confirming that simulation-based, trial-and-error optimization is the hallmark of Reinforcement Learning .

- E. Unsupervised Learning

Answer: D

NEW QUESTION # 94

Your team is working on a project and is running into some issues. You need someone on the team who is able to solve problems in environments of uncertainty, can deal with failure, and has the math and data visualization skills needed to communicate the results with others so the issues can get resolved.

- A. Citizen Data Scientist
- B. Data Engineer
- C. Project Manager
- D. Data Scientist

Answer: D

Explanation:
CPMAI defines a Data Scientist as the role responsible for "formulating data-driven hypotheses, selecting and applying statistical algorithms, interpreting model results, and communicating insights to stakeholders," all of which require critical thinking under uncertainty, advanced mathematics, and strong data-visualization skills .
==========

NEW QUESTION # 95

Your team is working on an AI system to provide a more personalized experience for customers on your website. What should the team do in regard to determining the pattern of AI with regards to the ROI of the project?

- A. First talk to senior managers who set the ROI of the project
- B. First identify the AI pattern you want to use and then figure out the ROI
- C. First determine the pattern of AI you want to use and then work with stakeholders to come up with ROI
- D. First identify the objective you're trying to solve or the ROI you desire and then use that to figure out the correct pattern

Answer: D

Explanation:
In CPMAI's Executing the Business Understanding Phase, teams first "formulate AI-specific business questions" and "estimate time-to-ROI for various AI project types" before matching business needs to cognitive patterns . This ensures ROI-driven objectives guide the selection of one or more of the Seven Patterns of AI, rather than the reverse.

Answer: C
