SAP Certified Associate - WalkMe Digital Adoption Consultant Sample Questions (Q13-Q18):

NEW QUESTION # 13

The Dynamic Layout of a ShoutOut in the Editor consists of which three layers? Note: There are 3 correct answers to this question.

- A. Canvas
- B. Frame
- C. Z-index
- D. Widget
- E. Player

Answer: A,B,D

NEW QUESTION # 14

You are analyzing your Smart Walk-Thru steps and see significant drop-off following a Wait For step. What should you investigate to try to get to the root of the issue?

- A. Update your step triggers.
- B. Look at your Smart Walk-Thru step initiators.
- C. Remove the step completely.
- D. Look at your Wait For condition rules.

Answer: D

Explanation:

A Wait For step in a Smart Walk-Thru pauses the flow until specific conditions are met, such as an element appearing on the screen or a page load completing. If users are dropping off after a Wait For step, the most likely cause is that the condition rules are not being satisfied, causing the flow to stall. Investigating the Wait For condition rules-such as checking if the targeted element is correctly identified, the condition is achievable, or the timeout period is sufficient-helps identify and resolve the issue.

The other options are less relevant:

- * Updating step triggers(A) applies to user actions that advance steps, not Wait For conditions.
- * Looking at step initiators(B) relates to how the Smart Walk-Thru starts, not why users drop off mid-flow.
- * Removing the step completely(D) is a last resort and doesn't address the root cause.

Extract from Official WalkMe Documentation:

Per the WalkMe Editor User Guide (SAP WalkMe Digital Adoption Consultant Study Guide, Section 2.2:

Smart Walk-Thrus):

"Wait For steps pause a Smart Walk-Thru until predefined conditions are met, such as an element becoming visible. If users drop off at a Wait For step, review the condition rules to ensure they are correctly configured and achievable within the expected timeframe."

The course Advancing Your Skills in Building WalkMe Solutions advises:

"Significant drop-off at a Wait For step often indicates misconfigured condition rules, such as an element not appearing as expected. Use the Flow Tracker and Insights to analyze and adjust these rules." Option C is the correct choice, as it focuses on investigating the Wait For condition rules to address the drop-off issue.
