Topic 5	Certificate Management: This section of the exam measures the skills of a Certificate Manager and covers the administration of digital certificates, including issuance, renewal, and revocation processes.
Topic 6	PKI and FortiAuthenticator as a CA: This section of the exam measures the skills of a PKI Specialist and covers the use of FortiAuthenticator as a Certificate Authority (CA) within a Public Key Infrastructure (PKI).
Topic 7	Portal Services: This section of the exam measures the skills of a Portal Administrator and covers the configuration and management of self-service portals for guest and local user access.
Topic 8	FSSO Process and Methods: This section of the exam measures the skills of a Network Architect and covers the Fortinet Single Sign-On (FSSO) framework, including its processes and various deployment methods.

Fortinet FCP—FortiAuthenticator 6.5 Administrator Sample Questions (Q86-Q91):

NEW QUESTION # 86

Which two behaviors do certificate revocation lists (CRLs) on FortiAuthenticator exhibit? (Choose two.)

- A. CRLs contain the serial number of the certificate that has been revoked
- B. CRLs can be distributed only through the SCEP server
- C. All local CAs share the same CRLs
- D. Revoked certificates are automatically placed on the CRL

Answer: A,D

Explanation:

Revoked certificates are automatically added to the CRL by FortiAuthenticator.

CRLs list the serial numbers of certificates that have been revoked, allowing clients to identify and reject them.

NEW QUESTION # 87

Which two statements about the self-service portal are true? (Choose two)

- A. Self-registration information can be sent to the user through email or SMS
- B. Realms can be used to configure which self-registered users or groups can authenticate on the network
- C. Administrator approval is required for all self-registration
- D. Authenticating users must specify domain name along with username

Answer: A,B

NEW QUESTION # 88

When working with administrator profiles, which permission sets can be customized?

- A. All permission sets can be customized.
- B. Only the pre-existing permission sets can be customized.
- C. Only non-administrator permission sets can be customized.
- D. Only user-created or cloned permission sets can be customized.

Answer: D

NEW QUESTION # 89

When creating an administrative user, what capabilities does the Web service access option provide?

- A. Access to the administrative GUI from outside the local subnet
- B. Management of enabled web services on the FortiAuthenticator interface
- **C. Access to web services using the REST API**
- D. Provides management access for all portal service configurations

Answer: C

Explanation:

The Web service access option grants the administrative user permission to access FortiAuthenticator's web services via the REST API, enabling programmatic management and automation.

NEW QUESTION # 90

An administrator wants users and devices that cannot be identified transparently, such as Android BYOD devices, to be able to register and create their own credentials.

In this case, which FortiAuthenticator user identity discovery method can the administrator use?

- A. Syslog messaging or SAML IdP
- B. SSOMA
- C. Kerberos-based authentication
- **D. Portal authentication**

Answer: D

Explanation:

Portal authentication allows unidentified users or devices, such as Android BYOD devices, to self-register and create credentials through a captive or guest portal on FortiAuthenticator.

NEW QUESTION # 91

.....
