

# NS0-185 Valid Braindumps Ppt | New NS0-185 Exam Experience

Scrum PSPO-II

Professional Scrum Product Owner II

1

**Valid Braindumps PSPO-II Files: 2023 Realistic Scrum Professional Scrum Product Owner II Reliable Exam Price Pass Guaranteed**

Our website focus on helping candidates pass Scrum certification exams with our valid PSPO-II practice questions and detailed test answers. The most reliable PSPO-II dumps pdf are written by our professional IT experts who have rich experience in actual test. And you will be enjoyed one-year free updating after you make payment.

Scrum PSPO-II Exam consists of 30 multiple-choice questions that must be completed in 90 minutes. PSPO-II exam assesses the candidate's understanding of advanced Product Owner concepts such as product value, stakeholder management, product backlog refinement, and optimizing the product value. PSPO-II exam also evaluates the candidate's ability to apply the Scrum framework to real-world scenarios and make informed decisions based on the Scrum values and principles.

**Quiz 2023 The Best Scrum Valid Braindumps PSPO-II Files**

In this highly competitive IT world, PSPO-II certification exam are more important than any time before. If you choose Exams4Collection, we guarantee that you will easily pass PSPO-II exam at one time. If you can't pass PSPO-II Certification Exam, or there are any problems of PSPO-II exam dumps, we will give a full refund unconditionally. What are you waiting for? Hurry up and fight for your IT dream.

Scrum PSPO-II Certification Exam is intended for experienced Product Owners who have already obtained the Scrum PSPO-I certification. It is also suitable for Product Owners who have been working in Scrum teams for at least 2 years and have a deep understanding of Scrum principles and practices.

Valid Braindumps PSPO-II Files: 2023 Realistic Scrum Professional Scrum Product Owner II Reliable Exam Price Pass Guaranteed

After passing the Network Appliance NS0-185 certification exam, you can take advantage of a number of extra benefits. With the correct concentration, commitment, and NS0-185 exam preparation, you could ace this NetApp Storage Installation Engineer, ONTAP Professional Exam NS0-185 test with ease. Actual4test is a trusted and leading platform that is committed to preparing the Network Appliance NS0-185 exam candidates in a short time period.

You can use NS0-185 guide materials through a variety of electronic devices. At home, you can use the computer and outside you can also use the phone. Now that more people are using mobile phones to learn our NS0-185 study guide, you can also choose the one you like. We have three versions of our NS0-185 Exam Braindumps: the PDF, the Software and the APP online. And you can free download the demo s to check it out.

## Network Appliance - Efficient NS0-185 Valid Braindumps Ppt

We often regard learning for NS0-185 exam as a torture. Actually, learning also can become a pleasant process. With the development of technology, learning methods also take place great changes. With our NS0-185 study materials, all of your study can be completed on your computers because we have developed a kind of software which includes all the knowledge of the exam. The simulated and interactive learning environment of our NS0-185 Practice Engine will greatly arouse your learning interests.

## Network Appliance NetApp Storage Installation Engineer, ONTAP Professional Exam Sample Questions (Q95-Q100):

### NEW QUESTION # 95

You have a 4-node ONTAP 9.8 cluster with a FAS8700 HA pair that serves iSCSI LUNs. You are adding a new AFF A250 HA pair to the cluster with new iSCSI SAN LIFs. You need to allow non-optimized data paths from the AFF A250 nodes to the existing LUNs on the FAS8700 nodes.

In this scenario, which two ONTAP configuration settings must you verify? (Choose two.)

- A. port sets
- B. reporting nodes
- C. failover groups
- D. switch zoning

**Answer: A,B**

Explanation:

This scenario is about iSCSI SAN path visibility after cluster expansion. ONTAP uses Selective LUN Map (SLM) concepts so that hosts do not automatically see every LUN through every node, which would create unnecessary paths. ONTAP documentation explains that with SLM, when a LUN map is created, the LUN is accessible through paths on the node that owns the LUN and its HA partner, and this behavior is controlled through the reporting-nodes list.

If you want additional paths (including non-optimized paths) from newly added nodes, you must ensure the new nodes can be included in the reporting scope for those LUN mappings. ONTAP provides an explicit mechanism for this: the lun mapping add-reporting-nodes command is used before or after data mobility events to add nodes to the reporting-nodes list for a LUN mapping. This directly matches option C (reporting nodes).

However, even if reporting-nodes is expanded, hosts only gain usable iSCSI access if the target LIFs are reachable/allowed.

ONTAP documentation describes that portsets can be used with SLM to further restrict access, and when using SLM with portsets, LUNs are accessible on the set of LIFs included in the portset (on the owning node and its HA partner). Therefore, to "allow non-optimized paths from the AFF A250 nodes," you must verify whether portsets are being used and that the appropriate new iSCSI LIFs are included (or that no restrictive portset blocks them). That makes option A (port sets) the second correct configuration item. Option B (switch zoning) applies to FC fabrics, not iSCSI. Option D (failover groups) affects NAS /management LIF failover behavior and does not control SAN LUN reporting visibility in the way SLM /reporting-nodes and portsets do.

### NEW QUESTION # 96

You want to add an AFF A400 HA pair to an existing cluster.

In this scenario, which LIF type is required?

- A. node-mgmt
- B. intercluster
- C. cluster-mgmt
- D. data

**Answer: B**

Explanation:

When expanding an ONTAP cluster by adding new nodes or HA pairs, intercluster LIFs are required to enable secure communication between clusters or nodes during join and expansion workflows. Intercluster LIFs provide IP-based connectivity used for cluster peering, node addition, and replication setup.

Cluster management LIFs are used for administrative access, node management LIFs provide per-node management access, and data LIFs are used for client I/O. None of these LIF types support the inter-node communication required during cluster expansion. Therefore, an intercluster LIF is required.

### NEW QUESTION # 97

You need to create a configuration spreadsheet template for a new ONTAP 9.8 deployment.

Which NetApp tool should you use?

- A. Active IQ Unified Manager

- B. Interoperability Matrix Tool
- **C. ConfigBuilder**
- D. Active IQ Config Advisor

**Answer: C**

#### NEW QUESTION # 98

A customer wants to graphically manage a new clustered Data ONTAP system. Which tool should the customer use?

- A. StorageGRID
- **B. OnCommand System Manager**
- C. System Setup
- D. HostAgent

**Answer: B**

Explanation:

Graphical management of clustered Data ONTAP systems is performed using OnCommand System Manager, which provides a web-based interface for configuration, monitoring, and administration.

System Setup is used only for initial node setup, HostAgent is host-side software, and StorageGRID is an object storage platform unrelated to ONTAP cluster management.

OnCommand System Manager allows administrators to manage aggregates, volumes, LIFs, SAN objects, and system health through an intuitive GUI, making it the correct choice.

Therefore, the correct answer is B, as defined by NetApp.

#### NEW QUESTION # 99

You want to add two new nodes to an existing 4-node cluster.

In this situation, what must be considered regarding the cluster interconnect?

- A. IP addresses are used from the data LIFs.
- **B. When a new node joins a cluster, IP addresses are generated automatically.**
- C. Customer IP addresses must be provided.
- D. Class A subnet settings must be used.

**Answer: B**

#### NEW QUESTION # 100

.....

These Network Appliance NS0-185 exam questions give you an idea about the final Network Appliance NS0-185 exam questions formats, exam question structures, and best possible answers, and you will also enhance your exam time management skills. Finally, at the end of NS0-185 Exam Practice test you will be ready to pass the final NS0-185 exam easily. Best of luck in NetApp Storage Installation Engineer, ONTAP Professional Exam (NS0-185) exam and professional career!!!
