## COF-C03 Study Group, Training COF-C03 Materials

A steadily rising competition has been noted in the tech field. Countless candidates around the globe aspire to be SnowPro® Core Certification (COF-C03) in this field. Snowflake COF-C03 stand out from the rest of the Snowflake professionals. Once you become Snowflake certified, a whole new scope opens up to you and you are immediately hired by reputed firms. Even though the SnowPro® Core Certification (COF-C03) boosts your career options, you have to pass the COF-C03 Exam. This SnowPro® Core Certification (COF-C03) exam serves to filter out the capable from incapable candidates.

## Snowflake SnowPro® Core Certification (COF-C03) Sample Questions (Q87-Q92):

### NEW QUESTION # 87

When unloading to a stage, which of the following is a recommended practice or approach?

- A. Define an individual file format
- B. Set SINGLE: = true for larger files
- C. Use OBJECT\_CONSTRUCT ( \* ) when using Parquet
- D. Avoid the use of the CAST function

**Answer: A**

Explanation:

When unloading data to a stage, it is recommended to define an individual file format. This ensures that the data is unloaded in a consistent and expected format, which can be crucial for downstream processing and analysis.

### NEW QUESTION # 88

What is the MINIMUM Snowflake edition required to use the query acceleration service?

- A. Business Critical
- B. Enterprise
- C. Virtual Private Snowflake (VPS)
- D. Standard

**Answer: B**

### NEW QUESTION # 89

What is the purpose of the STRIP NULL\_VALUES file format option when loading semi-structured data files into Snowflake?

- A. It skips rows with null values during the loading process.
- B. It removes null values from all columns in the data.
- C. It removes object or array elements containing null values.
- D. It converts null values to empty strings during loading.

**Answer: C**

Explanation:

The STRIP NULL\_VALUES file format option, when set to TRUE, removes object or array elements that contain null values during the loading process of semi-structured data files into Snowflake. This ensures that the data loaded into Snowflake tables does not contain these null elements, which can be useful when the "null" values in files indicate missing values and have no other special meaning.

### NEW QUESTION # 90

A column named "Data" contains VARIANT data and stores values as follows:

How will Snowflake extract the employee's name from the column data?

- A. DATA:employee.name
- B. data:employee.name
- C. Data:employee.name
- D. data:Employee.name

**Answer: B**

Explanation:

In Snowflake, to extract a specific value from a VARIANT column, you use the column name followed by a colon and then the key.

The keys are case-sensitive. Therefore, to extract the employee's name from the "Data" column, the correct syntax is data:employee.name.

### NEW QUESTION # 91

What type of query will benefit from the query acceleration service?

- A. Queries where the GROUP BY has high cardinality
- B. Queries of tables that have search optimization service enabled
- C. Queries without filters or aggregation
- D. Queries with large scans and selective filters

**Answer: D**

Explanation:

The query acceleration service in Snowflake is designed to benefit queries that involve large scans and selective filters. This service can offload portions of the query processing work to shared compute resources, which can handle these types of workloads more efficiently by performing more work in parallel and reducing the wall-clock time spent in scanning and filtering.
