To become a PCNSA, candidates must pass the PCNSA Certification Exam. PCNSA exam is designed to test candidates' knowledge and skills in areas such as the Palo Alto Networks platform architecture, firewall configuration, security policies, VPN configuration, and network traffic monitoring. PCNSA exam is a timed, proctored exam and consists of multiple-choice questions as well as hands-on simulations of firewall configurations.

Earning the PCNSA certification demonstrates to employers and peers that an individual has a strong foundation in network security and can effectively manage Palo Alto Networks next-generation firewalls. It can also help professionals advance their careers and increase their earning potential. Additionally, maintaining the certification requires ongoing education and training, ensuring that certified professionals stay up-to-date with the latest network security technologies and best practices.

PCNSA exam has a time limit of 90 minutes, and candidates must achieve a passing score of 70% or higher to earn the certification. PCNSA Exam is available through Pearson VUE, a global testing company that delivers certification exams for a variety of industries.

Palo Alto Networks Certified Network Security Administrator Sample Questions (Q107-Q112):

NEW QUESTION # 107

Which two configurations does an administrator need to compare in order to see differences between the active configuration and potential changes if committed? (Choose two.)

- A. Candidate
- B. Device state
- C. Active
- D. Running

Answer: A,D

NEW QUESTION # 108

Refer to the exhibit. An administrator is using DNAT to map two servers to a single public IP address. Traffic will be steered to the specific server based on the application, where Host A (10.1.1.100) receives HTTP traffic and Host B (10.1.1.101) receives SSH traffic.

Which two Security policy rules will accomplish this configuration? (Choose two.)

- A. Untrust (Any) to DMZ (1.1.1.100), ssh -Allow
- B. Untrust (Any) to DMZ (1.1.1.100), web-browsing -Allow
- C. Untrust (Any) to DMZ (10.1.1.100, 10.1.1.101), ssh, web-browsing -Allow
- D. Untrust (Any) to Untrust (10.1.1.1), web-browsing -Allow
- E. Untrust (Any) to Untrust (10.1.1.1), ssh -Allow

Answer: A,B

NEW QUESTION # 109

An administrator creates a new Security policy rule to allow DNS traffic from the LAN to the DMZ zones. The administrator does not change the rule type from its default value.

What type of Security policy rule is created?

- A. Interzone
- B. Intrazone
- C. Tagged
- D. Universal

Answer: D

NEW QUESTION # 110

Recently changes were made to the firewall to optimize the policies and the security team wants to see if those changes are helping. What is the quickest way to reset the hit counter to zero in all the security policy rules?

- A. Reboot the firewall
- B. At the CLI enter the command reset rules and press Enter
- C. Highlight a rule and use the Reset Rule Hit Counter > Selected Rules for each rule
- D. Use the Reset Rule Hit Counter > All Rules option

Answer: D

Explanation:

Under Policies > Security, at the the bottom of the screen, choose Reset Rule Hit Counter, available options are 1) All rules or 2) Selected Rules.

NEW QUESTION # 111

All users from the internal zone must be allowed only Telnet access to a server in the DMZ zone. Complete the two empty fields in the Security Policy rules that permits only this type of access.

Choose two.
