ServiceNow CIS-PA Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Perform Diagnostics and Troubleshooting
Topic 2	<ul style="list-style-type: none"> Administration and Solutions: This domain covers administrative tasks using the Admin Console and accelerating deployment with pre-built Content Packs.
Topic 3	<ul style="list-style-type: none"> Data Visualization: This section focuses on presenting data through widgets, interactive filters, appropriate visualizations, dashboards, and analyzing data using Analytics Hub and KPI Details.
Topic 4	<ul style="list-style-type: none"> Configure Indicators and Indicator Sources: This domain addresses creating and configuring indicators (performance metrics), including source conditions, fact tables, indicator types, properties, and aggregation scripts.
Topic 5	<ul style="list-style-type: none"> This section addresses identifying and resolving issues using Spotlight diagnostic tools to monitor system health and performance.
Topic 6	<ul style="list-style-type: none"> Data Collection: This domain explains how Performance Analytics gathers and processes data, including collection flow, configuration properties, and troubleshooting collection issues.
Topic 7	<ul style="list-style-type: none"> Configure Breakdowns and Breakdown Sources: This section covers setting up breakdowns to analyze indicators across different dimensions, including breakdown mappings, matrices, exclusions, scripted mappings, and bucket groups.

CIS-PA Reliable Test Voucher | Pass CIS-PA Guarantee

Everybody knows that ServiceNow is an influential company with high-end products and best-quality service. It will be a long and tough way to pass CIS-PA exam test, especially for people who have no time to prepare the CIS-PA Questions and answers. So choosing right CIS-PA dumps torrent is very necessary and important for people who want to pass test at first attempt.

ServiceNow Certified Implementation Specialist - Platform Analytics Sample Questions (Q40-Q45):

NEW QUESTION # 40

Which application helps to obtain insights on new and returning platform users and their navigation patterns?

- A. Next Experience Dashboards
- B. Platform Analytics Workspace
- C. User Experience Analytics
- D. Responsive Dashboards

Answer: C

Explanation:

User Experience Analytics is the application designed to analyze user behavior, including new versus returning users, session frequency, navigation paths, page views, and interaction patterns across the ServiceNow platform. It provides insights into how users engage with the platform and helps organizations optimize usability, adoption, and performance.

Responsive Dashboards and Next Experience Dashboards are visualization and UI frameworks, not behavioral analytics tools.

Platform Analytics Workspace focuses on KPI monitoring and process performance, not clickstream or navigation behavior.

ServiceNow documentation clearly positions User Experience Analytics as the solution for understanding how users interact with the platform, making option D the correct answer.

NEW QUESTION # 41

What happens when Collect records is enabled on an Automated Indicator form?

- A. An ad-hoc job runs to collect the scores immediately for testing purposes
- B. A preview of the records that match the condition is displayed
- C. A list of sys_ids is stored during collection to allow drill down to records
- D. An exact copy of the matching records is retained for future reference

Answer: C

Explanation:

When Collect records is enabled on an Automated Indicator, Platform Analytics stores the sys_ids of the records that contributed to each indicator score at collection time. This capability enables drill-down functionality, allowing users to view the exact records behind a score directly from analytics widgets and dashboards. Importantly, Platform Analytics does not store full copies of records- only the identifiers- ensuring historical accuracy while maintaining storage efficiency.

Option A describes the preview feature available when defining indicator conditions, not record collection.

Option B refers to manual data collection, which is triggered separately. Option C is incorrect because Platform Analytics does not retain full record snapshots. ServiceNow documentation clearly states that enabling Collect records allows analytics users to drill into the contributing records for any given score, making option D the correct and precise answer.

NEW QUESTION # 42

An Indicator stores the value 42502.

If the Precision is set to 2, what is displayed in a Score widget?

- A. 4,250.20
- **B. 4.25k**
- C. 0
- D. 42,502.00

Answer: B

Explanation:

In Platform Analytics score widgets, the Precision setting controls how numeric values are abbreviated and rounded for display. When precision is set to 2, large numbers are displayed using compact notation (such as k for thousands) with two significant digits.

A stored value of 42,502 is therefore displayed as 4.25k, improving readability while preserving meaningful precision. Full numeric formatting or fixed decimal display is not the default behavior for score widgets.

ServiceNow documentation confirms that precision affects abbreviated score presentation, making option B the correct answer.

NEW QUESTION # 43

When using a Bucket Group as a Breakdown Source, which is the required Breakdown Source Facts table?

- **A. Bucket [pa_buckets]**
- B. The Indicator Facts table
- C. Choice [sys_choice]
- D. Bucket Group [pa_bucket_groups]

Answer: A

Explanation:

When a Bucket Group is used as a Breakdown Source in Platform Analytics, the required Facts table is Bucket [pa_buckets]. Bucket Groups define how numeric or duration values (such as age, time, or cost ranges) are grouped, but they do not store analytics facts themselves. The actual bucketed values generated during data collection are stored in the pa_bucket table, which makes it the authoritative facts table for bucket-based breakdowns.

The pa_bucket_group table only stores configuration metadata for bucket definitions. The sys_choice table is used exclusively for choice list values and is unrelated to bucket analytics. The Indicator Facts table stores indicator scores but does not contain bucket-level breakdown data. ServiceNow documentation explicitly states that any breakdown based on bucket groups must reference the pa_bucket table to ensure accurate historical analysis and proper breakdown rendering. Therefore, option A is the only correct answer.

NEW QUESTION # 44

Choose 2 options.

Which types of calendars are supported on an Indicator Source?

- A. Docket Calendar
- B. Fiscal Calendar
- **C. Custom Calendar**
- **D. Standard Calendar**
- E. Resource Calendar

Answer: C,D

Explanation:

Indicator Sources in Platform Analytics support Standard calendars and Custom calendars to control how data collection aligns with business time definitions. The Standard Calendar uses regular system time, while Custom Calendars allow organizations to define business-specific working days, holidays, and schedules.

Fiscal calendars are used for financial reporting but are not supported directly by Indicator Sources. Resource and Docket calendars are unrelated to analytics collection. ServiceNow documentation explicitly states that Indicator Sources rely on standard or custom calendars for accurate time-based aggregation, making options C and D the correct answers.

NEW QUESTION # 45

.....

In the major environment, people are facing more job pressure. So they want to get CIS-PA certification rise above the common herd. How to choose valid and efficient CIS-PA guide torrent should be the key topic most candidates may concern. So now, it is right, you come to us.
