질문 # 56

A sales manager wants a dashboard that shows sales aggregated by region and identifies high-volume sales by salesperson per region. Which of the following communication techniques best displays this information?

- A. User persona
- B. Level of detail
- C. Defined parameters
- **D. Filter options**

정답: D

설명:

This question pertains to the Visualization and Reporting domain, focusing on dashboard features for displaying data. The dashboard needs to show aggregated sales by region and allow identification of high-volume sales by salesperson within each region.

* Defined parameters (Option A): Parameters set specific values (e.g., a date range), but they don't directly enable interaction with aggregated data.

* Filter options (Option B): Filter options allow the user to select a region and then view salespersons within that region, enabling the identification of high-volume sales per region interactively.

* Level of detail (Option C): Level of detail determines the granularity of data shown but doesn't facilitate interactive exploration.

* User persona (Option D): User personas guide dashboard design but aren't a communication technique for displaying data.

The DA0-002 Visualization and Reporting domain emphasizes "translating business requirements to form the appropriate visualization," and filter options best enable the interactive analysis required.
