What's more, part of that Free4Torrent JN0-232 dumps now are free: <https://drive.google.com/open?id=1v-0ro5wv9PTur-krzgfHbtGAmOVnSLIe>

Individuals who pass the Security, Associate (JNCIA-SEC) certification exam demonstrate to their employers and clients that they have the knowledge and skills necessary to succeed in the industry. Free4Torrent is aware that preparing with outdated JN0-232 Study Material results in a loss of time and money.

The contents of JN0-232 study materials are all compiled by industry experts based on the JN0-232 examination outlines and industry development trends over the years. It does not overlap with the content of the JN0-232 question banks on the market, and avoids the fatigue caused by repeated exercises. Our JN0-232 Exam Guide is not simply a patchwork of exam questions, but has its own system and levels of hierarchy, which can make users improve effectively.

Juniper JN0-232 Valid Exam Notes - JN0-232 Valid Test Experience

Our JN0-232 study guide design three different versions for all customers. These three different versions include PDF version, software version and online version, they can help customers solve any problems in use, meet all their needs. Although the three major versions of our JN0-232 exam dumps provide a demo of the same content for all customers, they will meet different unique requirements from a variety of users based on specific functionality. The most important feature of the online version of our JN0-232 Learning Materials are practicality. The online version is open to all electronic devices, which will allow your device to have common browser functionality so that you can open our products. At the same time, our online version of the JN0-232 study guide can also be implemented offline, which is a big advantage that many of the same educational products are not able to do on the market at present.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q40-Q45):

NEW QUESTION # 40

You are not able to ping an interface on an SRX Series Firewall.
Which two actions should you take to solve this issue? (Choose two.)

- A. Assign the interface to a security zone.
- B. Configure the ICMP protocol for host-inbound-traffic.
- C. Assign the interface to the null zone.
- D. Create a security policy to allow ping traffic.

Answer: A,B

Explanation:

For an SRX firewall interface to respond to management traffic such as ICMP pings:

* The interface must be assigned to a security zone (Option A). If an interface is not part of any zone, it is placed into the null zone,

which drops all traffic.

* Additionally, the zone must be configured to allow management traffic types as host-inbound-traffic (Option D). For ICMP, the protocol must be explicitly allowed under host-inbound-traffic for that zone.

Other options:

* Security policies (Option B) control traffic traversing the firewall, not traffic destined to the SRX device itself.

* Assigning the interface to the null zone (Option C) prevents any communication, including management.

Correct Actions: Assign the interface to a zone and configure ICMP under host-inbound-traffic.

NEW QUESTION # 41

Click the Exhibit button.

Referring to the exhibit, which statement is correct?

- A. policy2 will be shadowed because it matches the same application as policy1.
- **B. policy3 will be shadowed because it matches the same application as policy1.**
- C. None of the policies will be shadowed.
- D. policy1 will be shadowed because it matches the same application as policy3.

Answer: B

Explanation:

Juniper SRX evaluates security policies in order, top to bottom. The first matching policy determines the action, and no further policies are evaluated. This behavior can lead to shadowed policies if later policies match the same conditions as earlier ones.

From the exhibit:

* Policy1: Matches application junos-http and permits traffic.

* Policy2: Matches application junos-https and permits traffic.

* Policy3: Matches application junos-http again, but denies traffic.

Since policy1 already matches all HTTP traffic and permits it, traffic never reaches policy3. This makes policy3 shadowed because it has the same match condition as policy1 but is evaluated later in the list.

Other options:

* Policy1 is not shadowed because it is evaluated first.

* Policy2 is independent (application = HTTPS) and therefore unaffected.

* Only policy3 is shadowed by policy1.

Correct Statement: Policy3 will be shadowed because it matches the same application as policy1.

NEW QUESTION # 42

You want to use Avira Antivirus.

Which two actions should you perform to satisfy this requirement? (Choose two.)

- A. Enable the Avira engine in operational mode.
- **B. Reboot the SRX Series device to load the components.**
- C. Restart the management daemon (mgd) to load the components.
- **D. Enable the Avira engine in configuration mode.**

Answer: B,D

Explanation:

The SRX Series devices support third-party antivirus scanning engines such as Avira. To use the Avira antivirus engine, administrators must explicitly enable the engine and ensure that the required components are properly loaded.

* Enable in configuration mode:

* The Avira antivirus engine must be enabled under UTM configuration mode. This step ensures the SRX device uses the Avira scanning engine for antivirus inspection.

* Example:

* set security utm feature-profile anti-virus avira-engine enable

* Reboot the SRX device:

* A system reboot is required after enabling the Avira engine to load the Avira antivirus components into memory.

* Without a reboot, the Avira engine will not become active.

* Why not the others?

* Restarting the mgd process (Option A) only reloads the management daemon and does not load antivirus engines.

* Enabling inoperational mode (Option B) is not supported; the configuration must be applied in configuration mode.

Therefore, the correct actions to use Avira Antivirus are: Enable the Avira engine in configuration mode (Option D) and reboot the SRX device (Option C).

NEW QUESTION # 43

Click the Exhibit button.

Referring to the exhibit, which two statements are correct? (Choose two.)

- A. The SRX firewall does not have an SSL proxy configuration.
- B. The NextGen Web Filtering type is being used.
- C. The URL matches a predefined Web filtering category.
- D. This is a custom Web filtering block message.

Answer: B,C

Explanation:

From the exhibit:

* The user attempted to access <https://www.wikipedia.org>.

* The block page indicates:

* CATEGORY: NG_Reference

* REASON: BY_PRE_DEFINED

* The header states: "Juniper Web Filtering has been set to block this site." Analysis of options:

* Option A: Correct. The log shows "REASON: BY_PRE_DEFINED," which means the site was blocked because it matched a predefined category in the Web filtering database.

* Option B: Correct. The category "NG_Reference" indicates that the NextGen (Enhanced/Cloud-based) Web Filtering type is being used.

* Option C: Incorrect. The exhibit does not provide any information about SSL proxy configuration; it only shows that the HTTPS site was blocked.

* Option D: Incorrect. The block page shown is the standard Juniper default block page, not a custom message.

Correct Statements: The URL matches a predefined Web filtering category, and the NextGen Web Filtering type is being used.

NEW QUESTION # 44

What is a purpose for creating multiple routing instances on an SRX Series Firewall device?

- A. to manage routing protocols and updates
- B. to enable network monitoring through SNMP
- C. to maintain separation of routing information for security purposes
- D. to simplify the configuration of network interfaces

Answer: C

Explanation:

Multiple routing instances (such as virtual routers or VRFs) can be configured on an SRX to provide separation of routing tables. This enables:

* Maintaining separation of routing information (Option B): Different departments, tenants, or customers can have their own independent routing domains for security and isolation.

* SNMP monitoring (Option A) is unrelated to routing instances.

* Routing protocols (Option C) can be run inside each instance, but the purpose of multiple instances is separation, not general routing protocol management.

* Simplifying interface configuration (Option D) is not a function of routing instances.

Correct Purpose: To maintain separation of routing information for security purposes.
