

New HP HPE7-A01 Dumps Pdf | Reliable HPE7-A01 Test Sample

P.S. Free & New HPE7-A01 dumps are available on Google Drive shared by ValidTorrent: <https://drive.google.com/open?id=1fPjJfpPtjpJ3p--ijNH1dDOVHVfZWyO>

We often regard learning for HPE7-A01 exam as a torture. Actually, learning also can become a pleasant process. With the development of technology, learning methods also take place great changes. With our HPE7-A01 study materials, all of your study can be completed on your computers because we have developed a kind of software which includes all the knowledge of the exam. The simulated and interactive learning environment of our HPE7-A01 Practice Engine will greatly arouse your learning interests.

HPE7-A01 certification exam covers a wide range of topics related to wireless networking, including access points, wireless LANs, network security, and mobility. HPE7-A01 exam also covers topics related to network design, such as network topology, capacity planning, and network management. Additionally, the exam requires candidates to have a thorough understanding of the ArubaOS operating system.

To become an Aruba Certified Campus Access Professional, candidates must demonstrate their ability to configure and manage Aruba wireless access points, controllers, and mobility controllers. They must also understand the principles of network design, security, and troubleshooting, as well as the key features and benefits of Aruba's products and solutions. The HPE7-A01 exam is a comprehensive test of these skills, and passing it is a requirement for obtaining the Aruba Certified Campus Access Professional certification.

The HP HPE7-A01 Exam covers a wide range of topics, including Aruba wireless solutions and technologies, network architecture, security and authentication, troubleshooting, and management. HPE7-A01 exam consists of 60 multiple-choice questions, and candidates have 90 minutes to complete it. The passing score for the exam is 75%. Aruba Certified Campus Access Professional Exam certification is valid for three years, after which the candidate must recertify to maintain their certification status. With this certification, professionals can demonstrate their expertise in Aruba wireless technologies and solutions, which can help them advance their careers and increase their earning potential.

Professional New HPE7-A01 Dumps Pdf by ValidTorrent

Our HPE7-A01 study materials have plenty of advantages. For example, in order to meet the needs of different groups of people, we provide customers with three different versions of HPE7-A01 study materials, which contain the same questions and answers. You can choose the one that best suits you according to your study habits. Secondly, the passing rate of our HPE7-A01 Study Materials is very high. Generally speaking, 98 % - 99 % of the users can successfully pass the exam, obtaining the corresponding certificate.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q144-Q149):

NEW QUESTION # 144

A customer wants to enable wired authentication across all their CX switches. One of the requirements is that the switch must be able to authenticate a single computer connected through a VoIP phone.

Which feature should be enabled to support this requirement?

- A. Multi-Auth Mode
- **B. Multi-Domain Authentication**
- C. MAC Authentication
- D. Device-Based Mode

Answer: B

Explanation:

Multi-Domain Authentication is the feature that should be enabled to support the requirement that the switch must be able to authenticate a single computer connected through a VoIP phone. Multi-Domain Authentication is a feature that allows an Aruba CX switch to apply different authentication methods and policies to different devices connected to the same port. For example, a VoIP phone and a computer can be connected to the same port using a single cable, but they can be authenticated separately using different credentials and assigned to different VLANs. The other options are incorrect because they either do not support multiple devices on the same port or do not provide authentication. References:

NEW QUESTION # 145

You are deploying Aruba CX 6300's with the customer's requirement to only allow one (1) VoIP phone and one (1) device.

The following local role gets assigned to the phone

port-access role VoIP device-traffic-class voice

What set of commands best fits this requirement?

- A. interface 1/1/1
aaa authentication port-access client-limit 2
aaa authentication port-access auth-mode client-mode
- B. interface 1/1/1
aaa authentication port-access auth-mode multi-domain
- C. interface 1/1/1
aaa authentication port-access client-limit 1 aaa authentication port-access auth-mode device-mode
- **D. interface 1/1/1
aaa authentication port-access client-limit multi-domain 2 aaa authentication port-access auth-mode multi-domain**

Answer: D

Explanation:

Explanation

Aruba CX 6300 switches support various features to control the port access for different types of devices, such as client mode, device mode, and multidomain mode. These features can help limit the number of clients that can connect to a port and prevent unauthorized devices from accessing the network.

This is because option C shows how to configure the client limit and the auth-mode for a specific port using the interface command and the aaa authentication port-access command. The client limit specifies the maximum number of clients that can connect to a port. The auth-mode specifies the authentication mode for the port. In this case, option C sets both parameters to multi-domain mode, which allows only one voice device and one data device to be authenticated on a port.

NEW QUESTION # 146

A new network design is being considered to minimize client latency in a high-density environment. The design needs to do this by eliminating contention overhead by dedicating subcarriers to clients. Which technology is the best match for this use case?

- A. MU-MIMO
- **B. OFDMA**
- C. QWMM
- D. Channel Bonding

Answer: B

Explanation:

OFDMA (Orthogonal Frequency Division Multiple Access) is a technology that can minimize client latency in a high-density environment by eliminating contention overhead by dedicating subcarriers to clients. OFDMA allows multiple clients to transmit simultaneously on different subcarriers within the same channel, reducing contention and increasing efficiency. MU-MIMO (Multi-User Multiple Input Multiple Output) is a technology that allows multiple clients to transmit simultaneously on different spatial streams within the same channel, but it does not eliminate contention overhead.

QWMM (Quality of Service Wireless Multimedia) is a technology that prioritizes traffic based on four access categories, but it does not eliminate contention overhead. Channel Bonding is a technology that combines two adjacent channels into one wider channel, increasing bandwidth but not eliminating contention overhead.

NEW QUESTION # 147

What does the 802.3bz standard describe?

- A. 60 GHz P2P Wi-Fi
- **B. 2.5Gb and 5Gb Ethernet ports**
- C. 60 W and 90W PoE
- D. AP directed roaming between APs

Answer: B

Explanation:

802.3bz is a standard for Ethernet over twisted pair at speeds of 2.5 and 5 Gbit/s. These use the same cabling as the ubiquitous Gigabit Ethernet, yet offer higher speeds. The resulting standards are named 2.5GBASE-T and 5GBASE-T.

NEW QUESTION # 148

You need to configure an ACL on an Aruba switch to block HTTP traffic but allow HTTPS. Which of the following ACL rules accomplishes this?

- A. permit tcp any any neq 80
- B. permit tcp any any eq 443; deny tcp any any eq 80
- C. deny tcp any any eq 443; permit tcp any any eq 80
- **D. deny tcp any any eq 80; permit tcp any any eq 443**

Answer: D
