

Reliable DP-300 Test Questions - DP-300 Guaranteed Questions Answers

DOWNLOAD the newest itPass4sure DP-300 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1hJdz_LgsV2sjm7Rngl6hLbcTTOjgu3fP

We provide online customer service to the customers for 24 hours per day and we provide professional personnel to assist the client in the long distance online. If you have any questions and doubts about the Administering Relational Databases on Microsoft Azure guide torrent we provide before or after the sale, you can contact us and we will send the customer service and the professional personnel to help you solve your issue about using DP-300 Exam Materials. The client can contact us by sending mails or contact us online. We will solve your problem as quickly as we can and provide the best service. Our after-sales service is great as we can solve your problem quickly and won't let your money be wasted. If you aren't satisfied with our DP-300 exam torrent you can return back the product and refund you in full.

If you are not certain whether the DP-300 prep guide from our company is suitable for you or not, so you are hesitate to buy and use our study materials. Do not worry, in order to help you solve your problem and let you have a good understanding of our DP-300 study practice dump, the experts and professors from our company have designed the trial version for all people. You can have a try of using the DP-300 Prep Guide from our company before you purchase it. We believe that the trial version provided by our company will help you know about our study materials well and make the good choice for yourself. More importantly, the trial version of the DP-300 exam questions from our company is free for all people. We believe that the trial version will help you a lot.

DP-300 Guaranteed Questions Answers & DP-300 Valid Examcollection

itPass4sure provides a high-quality Microsoft DP-300 practice exam. The best feature of the Microsoft DP-300 exam dumps is that they are available in PDF and a web-based test format. Microsoft offer updated Microsoft DP-300 Exam products to our valuable customers. Real Microsoft DP-300 exam questions along with answers are being provided in two formats.

Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q283-Q288):

NEW QUESTION # 283

You have SQL Server on an Azure virtual machine. You review the query plan shown in the following exhibit.

For each of the following statements, select yes if the statement is true. Otherwise, select no.
NOTE: Each correct selection is worth one point.

Statements

You will reduce the I/O usage and the query execution time if you force the query plan.

Yes

No

You will increase the I/O usage and the query execution time if you create a new index on the SalesOrderHeader table.

You will reduce the I/O usage and the query execution time if you include the SubTotal, TaxAmt, and Freight columns in the PK_SalesOrderHeader_SalesOrderID index.

Answer:

Explanation:

Statements

You will reduce the I/O usage and the query execution time if you force the query plan.

Yes

No

You will increase the I/O usage and the query execution time if you create a new index on the SalesOrderHeader table.

You will reduce the I/O usage and the query execution time if you include the SubTotal, TaxAmt, and Freight columns in the PK_SalesOrderHeader_SalesOrderID index.

Explanation

Statements	Yes	No
You will reduce the I/O usage and the query execution time if you force the query plan.	<input type="radio"/>	<input type="radio"/>
You will increase the I/O usage and the query execution time if you create a new index on the SalesOrderHeader table.	<input type="radio"/>	<input checked="" type="radio"/>
You will reduce the I/O usage and the query execution time if you include the SubTotal, TaxAmt, and Freight columns in the PK_SalesOrderHeader_SalesOrderID index.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION # 284

You plan to migrate on-premises Microsoft SQL Server databases to Azure.

You need to identify which deployment and resiliency options meet the following requirements:

Support user-initiated backups.

Support multiple automatically replicated instances across Azure regions.

Minimize administrative effort to implement and maintain business continuity.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Deployment option:

	▼
Azure SQL Managed Instance	
SQL Server on Azure Virtual Machines	
An Azure SQL Database single database	

Resiliency option:

	▼
Auto-failover group	
Active geo-replication	
Zone-redundant deployment	

Answer:

Explanation:

Deployment option:

	▼
Azure SQL Managed Instance	
SQL Server on Azure Virtual Machines	
An Azure SQL Database single database	

Resiliency option:

	▼
Auto-failover group	
Active geo-replication	
Zone-redundant deployment

NEW QUESTION # 285

You are designing an enterprise data warehouse in Azure Synapse Analytics that will contain a table named Customers. Customers will contain credit card information.

You need to recommend a solution to provide salespeople with the ability to view all the entries in Customers.

The solution must prevent all the salespeople from viewing or inferring the credit card information.

What should you include in the recommendation?

- A. Always Encrypted
- B. row-level security
- C. column-level security
- **D. data masking**

Answer: D

Explanation:

Explanation

Azure SQL Database, Azure SQL Managed Instance, and Azure Synapse Analytics support dynamic data masking. Dynamic data masking limits sensitive data exposure by masking it to non-privileged users.

The Credit card masking method exposes the last four digits of the designated fields and adds a constant string as a prefix in the form of a credit card.

Example:

XXXX-XXXX-XXXX-1234

NEW QUESTION # 286

DRAG DROP

You have an Azure SQL Database instance named DatabaseA on a server named Server1.

You plan to add a new user named App1 to DatabaseA and grant App1 db_datacenter permissions. App1 will use SQL Server Authentication.

You need to create App1. The solution must ensure that App1 can be given access to other databases by using the same credentials.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Answer Area

On the master database, run CREATE LOGIN [App1] FROM EXTERNAL PROVIDER;

On DatabaseA, run CREATE USER [App1] WITH PASSWORD = 'P@ssW0rd!';

On DatabaseA, run ALTER ROLE db_datareader ADD MEMBER [App1];

On the master database, run CREATE LOGIN [App1] WITH PASSWORD = 'P@aaW0rd!';

On DatabaseA, run CREATE USER [App1] FROM LOGIN [App1];

Answer:

Explanation:

Actions

On the master database, run CREATE LOGIN [APP1] FROM EXTERNAL PROVIDER;

On DatabaseA, run CREATE USER [APP1] WITH PASSWORD = 'P@ssW0rd!';

Answer Area

On the master database, run CREATE LOGIN [App1] WITH PASSWORD = 'P@aaW0rd!';

On DatabaseA, run CREATE USER [App1] FROM LOGIN [App1];

On DatabaseA, run ALTER ROLE db_datareader ADD MEMBER [App1];

Section: [none]

Explanation:

Step 1: On the master database, run CREATE LOGIN [App1] WITH PASSWORD = 'p@aaW0rd!'

Logins are server wide login and password pairs, where the login has the same password across all databases.

Here is some sample Transact-SQL that creates a login:

```
CREATE LOGIN readonlylogin WITH password='1231!#ASDF!a';
```

You must be connected to the master database on SQL Azure with the administrative login (which you get from the SQL Azure portal) to execute the CREATE LOGIN command.

Step 2: On DatabaseA, run CREATE USER [App1] FROM LOGIN [App1]

Users are created per database and are associated with logins. You must be connected to the database in where you want to create the user. In most cases, this is not the master database. Here is some sample Transact-SQL that creates a user:

```
CREATE USER readonlyuser FROM LOGIN readonlylogin;
```

Step 3: On DatabaseA run ALTER ROLE db_datareader ADD Member [App1]

Just creating the user does not give them permissions to the database. You have to grant them access. In the Transact-SQL example below the readonlyuser is given read only permissions to the database via the db_datareader role.

```
EXEC sp_addrolemember 'db_datareader', 'readonlyuser';
```

NEW QUESTION # 287

SIMULATION

You need to configure a disaster recovery solution for db1. When a failover occurs, the connection strings to the database must remain the same. The secondary server must be in the West US 3 Azure region.

To complete this task, sign in to the virtual machine. You may need to use SQL Server Management Studio and the Azure portal.

Answer:

Explanation:

Configure active geo-replication and failover (Azure SQL Database)

You can configure active geo-replication for Azure SQL Database using the Azure portal or Azure CLI and to initiate failover.

Add a secondary database

The following steps create a new secondary database in a geo-replication partnership.

Step 1: In the Azure portal, browse to the database [Here db1] that you want to set up for geo-replication.

Step 2: On the SQL Database page, select your database [Here db1], scroll to Data management, select Replicas, and then select Create replica.

Step 3: Select or create [Here create] the server for the secondary database, and configure the Compute + storage options if necessary. You can select any region for your secondary server, but we recommend the paired region.

For region select: West US 3

Create SQL Database - Geo Replica

Microsoft

Primary database details

Additional settings will be defaulted where possible based on the the primary database.

Primary database:

Region:

Database details

Enter required settings for this database, including picking a logical server and configuring the compute and storage resources

Database name:

Server *

Region:

Want to use SQL elastic pool? * Yes No

Compute + storage * **General Purpose**
Standard-series (Gen5), 2 vCores, 32 GB storage, zone redundant disabled

Step 4: Click Review + create, review the information, and then click Create.

The secondary database is created and the deployment process begins.
