Answer: B,D,E

### NEW QUESTION # 18

You create an SAP HANA HDI Calculation View.

What are some of the reasons to choose the data category Cube with Star Join instead of data category Dimension? Note: There are 3 correct answers to this question.

- A. You can provide default time characteristics.
- B. You can create restricted columns.
- C. You can aggregate measures as a sum.
- D. You can combine master data transactional data.
- E. You can persist transactional data.

Answer: A,C,D

Explanation:

When creating an SAP HANA HDI Calculation View, choosing the data category Cube with Star Join over Dimension depends on the specific requirements of your data model. Below is a detailed explanation of why the verified answers are correct.

\* Data Category Dimension:

\* Used for modeling master data or reference data.

\* Does not support measures or aggregations.

\* Typically used for descriptive attributes (e.g., customer names, product descriptions).

\* Data Category Cube with Star Join:

\* Used for modeling transactional data with measures and dimensions.

\* Supports star schema designs, combining fact tables (measures) and dimension tables (attributes).

\* Enables advanced features like aggregations, time characteristics, and joins between master and transactional data.

\* Star Join:

\* A star join connects a fact table (containing measures) with dimension tables (containing attributes) in a star schema.

\* It is optimized for performance and scalability in analytical queries.

Key Concepts:

- \* Option A: You can combine master data transactional data.
- \* Why Correct?The Cube with Star Join data category is specifically designed to combine transactional data (fact tables) with master data (dimension tables).This enables comprehensive reporting and analysis.
- \* Option B: You can persist transactional data.
- \* Why Incorrect?Persisting transactional data is not a feature of the Cube with Star Join data category. Persistence is typically handled at the database or application layer.
- \* Option C: You can provide default time characteristics.
- \* Why Correct?The Cube with Star Join data category supports default time characteristics (e.g., fiscal year, calendar year), which are essential for time-based reporting and analysis.
- \* Option D: You can create restricted columns.
- \* Why Incorrect?Restricted columns are a feature of calculation views but are not specific to the Cube with Star Join data category. They can also be created in Dimension views.
- \* Option E: You can aggregate measures as a sum.
- \* Why Correct?The Cube with Star Join data category supports aggregations, such as summing measures.This is a key feature for analyzing transactional data.

Verified Answer Explanation:

- \* SAP HANA Modeling Guide:The guide explains the differences between data categories like Dimension and Cube with Star Join, highlighting their respective use cases.
- \* SAP Note 2700850:This note provides examples of scenarios where Cube with Star Join is preferred over Dimension, emphasizing its ability to handle transactional data and aggregations.
- \* SAP Best Practices for HANA Modeling:SAP recommends using Cube with Star Join for analytical models that require combining master and transactional data, providing default time characteristics, and performing aggregations.

#### NEW QUESTION # 19
