SAP C_TS470_2412 Test Questions Fee, C_TS470_2412 Training Kit

When you choose C_TS470_2412 valid study pdf, you will get a chance to participate in the simulated exam before you take your actual test. The contents of C_TS470_2412 exam torrent are compiled by our experts through several times of verification and confirmation. So the C_TS470_2412 questions & answers are valid and reliable to use. You can find all the key points in the C_TS470_2412 practice torrent. Besides, the C_TS470_2412 test engine training equipped with various self-assessment functions

like exam history, result scores and time setting, etc.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q37-Q42):

NEW QUESTION # 37

Which of the following objects are relevant to determine the correct plant and storage location in service order processing when reserving spare part items? Note: There are 3 correct answers to this question.

- A. Service organization
- B. Sales area
- C. Service employee
- D. Work center
- E. Service team

Answer: A,C,D

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, when reserving spare parts in service order processing (e.g., scope item 3D2: Service Order Management and Monitoring), the system determines the plant and storage location based on specific objects:

* Service organization: This defines the organizational unit responsible for the service, which is linked to a plant. The plant is a key attribute in logistics and inventory management, making it critical for spare part reservations.

* Work center: The work center specifies where the service is performed and is directly tied to a plant. It influences the storage location from which spare parts are drawn, especially in in-house or field service scenarios.

* Service employee: The employee assigned to the service order can influence the plant and storage location, particularly in field service scenarios where parts are reserved from a technician's stock (e.g., van stock linked to a specific storage location).

* Sales area: While relevant for sales processes, it does not directly determine plant or storage location for spare parts in service order processing.

* Service team: Teams are organizational groupings but do not have a direct system linkage to plant

/storage location determination for reservations. This logic is part of the integration between service management and logistics in SAP S/4HANA, ensuring accurate inventory allocation. "The plant and storage location for spare parts in a service order are derived from the service organization, work center, and assigned service employee." (SAP Help Portal, Service Order Processing).

NEW QUESTION # 38

When extending a functional location hierarchy, how is a new functional location initially assigned to it?

- A. Automatically based on the functional location category
- B. Manually by using the install function
- C. Manually by using the list editing transaction
- D. Automatically based on the structure indicator

Answer: D

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, a functional location hierarchy organizes technical objects in a structured manner. When adding a new functional location, it is automatically assigned based on the structure indicator (Option B).

The structure indicator defines the naming convention and hierarchy levels (e.g., A-B-C for a three-level structure). When a new functional location is created, the system uses this indicator to place it in the hierarchy automatically, based on its ID (e.g., A-B becomes a child of A).

* A: The category defines properties, not the hierarchy position.

* C: List editing is for mass changes, not initial assignment.

* D: The install function is for equipment, not functional locations.

"A new functional location is automatically assigned to the hierarchy based on the structure indicator, which governs the hierarchical naming and positioning."

NEW QUESTION # 39

Which of the following is a prerequisite to install a piece of equipment in a functional location?

- A. Set the installation flag for a piece of equipment
- **B. Allow the equipment category to be installed in a functional location**
- C. Set the installation flag for a functional location category
- D. Allow the combination of equipment category and object type to be installed in a functional location

Answer: B

Explanation:

To install equipment in a functional location in SAP S/4HANA:

- * Allow the equipment category to be installed in a functional location: The equipment category (e.g., M for machines) must be configured to permit installation (set in transaction OIEQ), ensuring compatibility with functional locations.
- * Combination of equipment category and object type: Object types are for classification, not installation prerequisites.
- * Installation flag for equipment/functional location: No such flags exist; installation is controlled by category settings. This is part of equipment management setup. "The equipment category must allow installation in a functional location as a prerequisite." (SAP Help Portal, Equipment Installation).

NEW QUESTION # 40

To which of the following can you assign a responsible work center? Note: There are 2 correct answers to this question.

- **A. Maintenance order operation**
- B. Functional location master record
- **C. Service order item**
- D. Maintenance item

Answer: A,C

Explanation:

A responsible work center in SAP S/4HANA Service defines where work is performed and is assigned to operational objects:

- * Maintenance order operation: In the Service with Advanced Execution scenario (scope item 63Q), a work center is assigned to operations within a maintenance order linked to a service order, specifying the execution location.
- * Service order item: In standard service order processing (scope item 3D2), a work center is assigned to a service item to indicate where the service task is executed (e.g., in-house or field).
- * Maintenance item: This refers to maintenance plan items, which do not directly accept work center assignments; work centers are linked via orders.
- * Functional location master record: Work centers are not assigned to functional locations; they are linked to equipment or orders instead. This is configured in the work center master data and order Customizing. "Assign a responsible work center to maintenance order operations or service order items to define execution responsibility." (SAP Help Portal, Work Center Configuration).

NEW QUESTION # 41

What options does a service planner have to influence the maintenance plan schedule? Note: There are 3 correct answers to this question.

- **A. Freeze call**
- B. Copy call
- C. Release call
- **D. Skip call**
- **E. Fix call**

Answer: A,D,E

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, a service planner can influence the maintenance plan schedule using specific actions to manage service calls effectively. The maintenance plan schedule is part of the recurring services process, where maintenance plans generate service calls based on defined cycles (e.g., time-based or counter-based). The options available to influence this schedule include:

- * Freeze call: This option allows the planner to lock a scheduled call, preventing it from being rescheduled or regenerated automatically until it is unfrozen. It ensures stability in planning for critical service events.
- * Skip call: This allows the planner to bypass a specific scheduled call without affecting the overall schedule. It's useful when a service event is not required at a particular time (e.g., due to customer availability).

* Fix call: This option fixes a call at a specific date, ensuring it remains scheduled as planned and is not shifted by automatic rescheduling processes. It provides control over critical service timing.

* Copy call and Release call are not standard options for directly influencing the maintenance plan schedule. Copying a call might be a manual workaround in some scenarios, but it's not a documented feature for schedule influence. Releasing a call is part of execution (e.g., releasing a service order), not schedule planning. These capabilities are detailed in the SAP S/4HANA Service documentation under recurring services and maintenance planning features, such as scope item 3MO (Service Contract Management). "In the maintenance plan scheduling, planners can freeze, skip, or fix calls to adjust the schedule according to operational needs." (SAP Signavio Process Navigator, Solution Process: Recurring Services).

NEW QUESTION # 42

.....

However, you should keep in mind that to get success in the C_TS470_2412 certification exam is not a simple and easy task. A lot of effort, commitment, and in-depth SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C_TS470_2412) exam questions preparation is required to pass this C_TS470_2412 Exam. For the complete and comprehensive SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C_TS470_2412) exam dumps preparation you can trust valid, updated, and C_TS470_2412 Questions which you can download from the BraindumpsPrep platform quickly and easily.
