問題 #60

Which of the following describes the function of an injector?

- A. To supply power across a cable
- B. To extend a network connection
- C. To improve wireless performance
- D. To provide only data connectivity

答案: A

解題說明:

A PoE injector is used to add power to an Ethernet cable, enabling the cable to deliver both power and data. This is crucial when connecting to PoE-enabled devices like IP cameras or wireless access points that are far from power outlets.

問題 #61

A desktop can connect to a file server but cannot access the internet. The ipconfig /all output shows a correct IP and DNS but no default gateway. What will most likely restore internet access?

- A. Choosing a different IPv6 address
- B. Disabling NetBIOS
- C. Setting the default gateway
- D. Flushing the DNS cache

答案: C

解題說明:

CompTIA A+ teaches that the default gateway is required for any device to communicate with external networks such as the internet. Without a configured default gateway, the computer can communicate only with devices on the same local subnet explaining why the file server is reachable.

DNS and IPv6 settings are not the issue; without a gateway, external routing cannot occur. Flushing DNS affects hostname resolution, not routing. NetBIOS settings have no effect on internet connectivity.

Adding or correcting the default gateway (usually the router's LAN IP, such as 192.168.1.1) will allow the PC to route traffic beyond its local network.

This aligns precisely with CompTIA's troubleshooting steps for missing or incorrect gateway configuration.

問題 #62

Which of the following resolutions is commonly known as Ultra HD?

- A. 3840x2160
- B. 7680x4320
- C. 2048x1080
- D. 1920x1080

答案: A

解題說明:

Ultra HD (UHD), also referred to as 4K UHD, has a resolution of 3840x2160. It's four times the resolution of standard 1080p (Full HD), offering more screen real estate and sharper images.

Option A (1920x1080): Full HD (FHD), not UHD.

Option B (2048x1080): DCI 2K - used in cinema, not common for Ultra HD.

Option D (7680x4320): Known as 8K UHD, not standard Ultra HD.

問題 #63

A company deploys its infrastructure in self-operated data centers. The company recently migrated some of its applications to a public cloud. Which of the following most accurately describes the cloud model the company is following?

- A. Hybrid
- B. Community
- C. Private
- D. Public

答案：A

解題說明：

A hybrid cloud combines private infrastructure (on-premises, self-operated data centers) with public cloud services, providing flexibility and scalability.

From CompTIA A+ 220-1101 Official Study Guide, Objective 3.7 - Cloud concepts:

"A hybrid cloud model integrates private and public cloud infrastructure to allow applications and data to be shared between them."

問題 #64

A network administrator must ensure that a printer will still be assigned a specific IP address even if all addresses are depleted. Which of the following network configuration concepts is this describing?

- A. VLAN
- B. Exclusion
- C. Lease
- D. Reservation

答案：D

解題說明：

A DHCP reservation binds a specific MAC address to an IP address so the device always receives the same IP from the DHCP server. This ensures network devices like printers maintain consistent connectivity and availability even when the IP pool is low.
