Our NSE7_CDS_AR-7.6 exam questions have the merits of intelligent application and high-effectiveness to help our clients study more leisurely. If you prepare with our NSE7_CDS_AR-7.6 actual exam for 20 to 30 hours, the NSE7_CDS_AR-7.6 exam will become a piece of cake in front of you. Not only you will find that to study for the exam is easy, but also the most important is that you will get the most accurate information that you need to pass the NSE7_CDS_AR-7.6 Exam.

We can assure you that you will get the latest version of our NSE7_CDS_AR-7.6 training materials for free from our company in the whole year after payment. For we promise to give all of our customers one year free updates of our NSE7_CDS_AR-7.6 exam questions and we update our NSE7_CDS_AR-7.6 Study Guide fast and constantly. Do not miss the opportunity to buy the best NSE7_CDS_AR-7.6 preparation questions in the international market which will also help you to advance with the times.

>> NSE7_CDS_AR-7.6 Valid Exam Test <<

Pass your NSE7_CDS_AR-7.6 exam in 2026 Smoothly!

The efficiency of our NSE7_CDS_AR-7.6 study materials can be described in different aspects. NSE7_CDS_AR-7.6 practice guide is not only financially accessible, but time-saving and comprehensive to deal with the important questions trying to master them efficiently. You can obtain our NSE7_CDS_AR-7.6 Preparation engine within five minutes after you pay for it successfully and then you can study with it right away. Besides, if you have any question, our services will solve it at the first time.

Fortinet NSE7_CDS_AR-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Cloud Infrastructure Monitoring: This domain addresses monitoring AWS and Azure networks using Fortinet monitoring tools designed for cloud workload visibility and management.

Topic 2	<ul style="list-style-type: none"> Automation Tools: This domain focuses on using infrastructure-as-code tools like Terraform, Ansible, Azure Bicep, and AWS CloudFormation to automate cloud infrastructure and Fortinet solution deployments.
Topic 3	<ul style="list-style-type: none"> Troubleshooting: This domain involves resolving connectivity issues in AWS and Azure environments, including diagnosing problems with SDN connectors.
Topic 4	<ul style="list-style-type: none"> Security Solutions Deployment: This domain covers deploying Fortinet solutions to protect IaaS and CaaS environments, and integrating them with cloud native security tools.

Fortinet NSE 7 - Public Cloud Security 7.6 Architect Sample Questions (Q42-Q47):

NEW QUESTION # 42

Refer to the exhibit.

You deployed an HA active-active load balance sandwich with two FortiGate VMs in Microsoft Azure.

After the deployment, you prefer to use FGSP to synchronize sessions, and allow asymmetric return traffic. In the environment, FortiGate port 1 and port 2 are facing external and internal load balancers respectively.

What IP address must you use in the peerip configuration?

- A. The public load balancer port 2 IP address.
- B. The opposite FortiGate port 1 IP address.
- C. The opposite FortiGate port 2 IP address.
- D. The internal load balancer port 1 IP address.

Answer: B

NEW QUESTION # 43

Refer to the exhibit.

```

Terraform configuration

$Azure:~/FCSS/terraform/Troubleshooting$ terraform plan

Error: building account: getting authenticated object ID: listing Service Principals: ServicePrincipalsClient.BaseClient.Get():
clientCredentialsToken: received HTTP status 400 with response: {"error": "invalid request", "error_description": "AADSTS90002: Tenant
'542b80cd-1b14-47a1-8dcf-4b21d0e61bb' not found. Check to make sure you have the correct tenant ID and are signing into the correct cloud.
Check with your subscription administrator, this may happen if there are no active subscriptions for the tenant.\n\nTrace ID:
fb39a7b9-1dc9-4d3f-a6c8-7f0569cf5690\n\nCorrelation ID: 81872e60-4daf-472a-967b-69960d36b66e\n\nTimestamp: 2022-09-14 19:53:26Z",
"error_codes": [90002], "timestamp": "2022-09-14 19:53:26Z", "trace_id": "fb39a7b9-1dc9-4d3f-a6c8-7f0569cf5690",
"correlation_id": "81872e60-4daf-472a-967b-69960d36b66e", "error_detail": "https://login.microsoftonline.com/error?code=90002"}

with provider["registry.terraform.io/hashicorp/azurerm"],
on provider.tf line 1, in provider "azurerm":
1: provider "azurerm" {

$Azure:~/FCSS/terraform/Troubleshooting$

```

After the initial Terraform configuration in Microsoft Azure, the terraform plan command is run.

Which two statements about running the terraform plan command are true? (Choose two.)

- A. You cannot run the terraform apply command before the terraform plan command.
- B. The terraform plan command makes terraform do a dry run.
- C. The terraform plan command will deploy the rest of the resources except the service principle details.
- D. You must run the terraform init command once, before the terraform plan command.

Answer: B,D

NEW QUESTION # 44

Refer to the exhibit. An experienced AWS administrator is creating a new Virtual Private Cloud (VPC) flow log with the settings shown in the exhibit.

What is the purpose of this configuration?

VPC flow log wizard

VPC > Your VPCs > Create flow log

Create flow log Info

Flow logs can capture IP traffic flow information for the network interfaces associated with your resources. You can create multiple flow logs to send traffic to different destinations.

Selected resources Info

Name	Resource ID	State
DefaultVPC	vpc-09d6e4631cd49d2b3	Available

Flow log settings

Name - *optional*

Filter

The type of traffic to capture (accepted traffic only, rejected traffic only, or all traffic).

Accept

Reject

All

Maximum aggregation interval Info

The maximum interval of time during which a flow of packets is captured and aggregated into a flow log record.

10 minutes

1 minute

Destination

The destination to which to publish the flow log data.

Send to CloudWatch Logs

Send to an Amazon S3 bucket

Send to Amazon Data Firehose in the same account

Send to Amazon Data Firehose in a different account

- A. To monitor logs in real time
- B. To retain logs for a long term
- C. To troubleshoot a log flow issue
- D. To maximize the number of logs saved

Answer: B

Explanation:

In the exhibit, the destination is set to Amazon S3, which is typically used for long-term storage and retention of VPC flow logs. CloudWatch or Data Firehose would be chosen for real-time monitoring or analysis, but S3 ensures the logs are retained cost-effectively for long durations.

NEW QUESTION # 45

Refer to the exhibit. A team of AWS administrators is in the process of installing a FortiWeb ingress controller to protect containerized web applications in an Amazon Elastic Kubernetes Service (EKS) cluster. While customizing the manifest file in the image, they realize that they do not know the correct value to enter in the `fortiweb-loginfield`.

How can they determine the correct value for this field?

Manifest file

```
apiVersion: networking.k8s.io/v1
kind: Ingress
metadata:
  name: simple-fanout-example
  annotations: {
    "fortiweb-ip" : "172.16.0.215",
    "fortiweb-login" : "??????",
    "fortiweb-port" : "8443",
    "fortiweb-ctrl-log" : "disable",
    "virtual-server-ip" : "172.16.0.153",
    "virtual-server-addr-type" : "ipv4",
    "virtual-server-interface" : "port1",
    "server-policy-web-protection-profile" : "Inline Standard Protection",
    "server-policy-https-service" : "HTTPS",
    "server-policy-http-service" : "HTTP",
    "server-policy-syn-cookie" : "enable",
    "server-policy-http-to-https" : "disable"
  }
spec:
  ingressClassName: fw-ingress-controller
  rules:
  - host: training.fortinet.lab
    http:
      paths:
      - path: /info
        pathType: Prefix
        backend:
          service:
            name: service1
            port:
              number: 1241
```

- A. The correct value is the password of the FortiWeb admin account.
- **B. They must create a Kubernetes secret with the kubectl command.**
- C. They can refer to the output of the EKS cluster deployment.
- D. They can find the expected value in the manifest file used to deploy the pods.

Answer: B

Explanation:

The fortweb-login field in the manifest requires credentials for the FortiWeb ingress controller to authenticate. This is not set directly in plain text; instead, administrators must create a Kubernetes secret using the kubectl command (containing the FortiWeb admin username and password), and reference it in the manifest. This ensures secure handling of authentication data.

NEW QUESTION # 46

Refer to the exhibit.

Azure monitoring

After analyzing the native monitoring tools available in Azure, an administrator decides to use the tool displayed in the exhibit. Why would an administrator choose this tool?

- A. To view details about Azure resources and their relationships across multiple regions.
- **B. To compare the latency of an on-premises site with the latency of an Azure application.**
- C. To obtain, and later examine, traffic flow data with a visualization tool.
- D. To help debug issues affecting virtual network gateways.

Answer: B

NEW QUESTION # 47
