AWS-Solutions-Architect-Associate Test Guide Online | AWS-Solutions-Architect-Associate Valid Exam Camp Pdf

To make sure that our customers who are from all over the world can understand the content of the AWS-Solutions-Architect-Associate exam questions, our professionals try their best to simplify the questions and answers and add some explanations to make them more vivid. So you will find that the unique set of our AWS-Solutions-Architect-Associate Practice Guide is the easiest and containing the most rewarding content, you can never found on any other website. And you will love our AWS-Solutions-Architect-Associate learning materials as long as you have a try on them!

The AWS Certified Solutions Architect - Associate (SAA-C02) exam is a certification offered by Amazon Web Services (AWS) for individuals who want to validate their knowledge and skills in designing and deploying scalable, highly available, and fault-tolerant systems on AWS. AWS-Solutions-Architect-Associate Exam is intended for professionals who have experience working with AWS and are responsible for designing and implementing solutions on the platform.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q463-Q468):

NEW QUESTION # 463

A company is moving its data and applications to AWS during a multiyear migration project. The company wants to securely access data on Amazon S3 from the company's AWS Region and from the company's on-premises location. The data must not traverse the internet. The company has established an AWS Direct Connect connection between its Region and its on-premises location Which solution will meet these requirements?

- A. Create a gateway in AWS Transit Gateway to access Amazon S3 securely from the Region and the on-premises location.

- B. Create gateway endpoints for Amazon S3. Use the gateway endpoints to securely access the data from the Region and the on-premises location.
- C. Create interface endpoints for Amazon S3_ Use the interface endpoints to securely access the data from the Region and the on-premises location.
- D. Use an AWS Key Management Service (AWS KMS) key to access the data securely from the Region and the on-premises location.

Answer: A

Explanation:

A gateway endpoint is a gateway that is a target for a specified route in your route table, used for traffic destined to a supported AWS service¹. Amazon S3 does not support gateway endpoints, only interface endpoints². Therefore, option A is incorrect.

An interface endpoint is an elastic network interface with a private IP address that serves as an entry point for traffic destined to a supported service¹. An interface endpoint can provide secure access to Amazon S3 from within the Region, but not from the on-premises location. Therefore, option C is incorrect.

AWS Key Management Service (AWS KMS) is a service that allows you to create and manage encryption keys to protect your data³. AWS KMS does not provide a way to access data on Amazon S3 without traversing the internet. Therefore, option D is incorrect.

AWS Transit Gateway is a service that enables you to connect your Amazon Virtual Private Clouds (VPCs) and your on-premises networks to a single gateway. You can create a gateway in AWS Transit Gateway to access Amazon S3 securely from both the Region and the on-premises location using AWS Direct Connect.

Therefore, option B is correct.

NEW QUESTION # 464

If I modify a DB Instance or the DB parameter group associated with the instance, should I reboot the instance for the changes to take effect?

- A. Yes
- B. No

Answer: A

NEW QUESTION # 465

Which of the following services natively encrypts data at rest within an AWS region? Choose 2 answers

- A. AWS Storage Gateway
- B. Amazon DynamoDB
- C. Amazon CloudFront
- D. Amazon Glacier
- E. Amazon Simple Queue Service

Answer: A,D

Explanation:

Reference: https://media.amazonwebservices.com/AWS_Securing_Data_at_Rest_with_Encryption.pdf (page 12)

NEW QUESTION # 466

A company hosts a three-tier ecommerce application on a fleet of Amazon EC2 instances. The instances run in an Auto Scaling group behind an Application Load Balancer (ALB) All ecommerce data is stored in an Amazon RDS for MySQL Multi-AZ DB instance The company wants to optimize customer session management during transactions The application must store session data durably Which solutions will meet these requirements? (Select TWO)

- A. Deploy an Amazon ElastiCache for Redis cluster to store customer session information
- B. Use AWS Systems Manager Application Manager in the application to manage user session information
- C. Use an Amazon DynamoDB table to store customer session information
- D. Deploy an Amazon Cognito user pool to manage user session information
- E. Turn on the sticky sessions feature (session affinity) on the ALB

Answer: A,E

Explanation:

<https://aws.amazon.com/caching/session-management/>

NEW QUESTION # 467

A company needs a solution to prevent photos with unwanted content from being uploaded to the company's web application. The solution must not involve training a machine learning (ML) model.

Which solution will meet these requirements?

- A. Create and deploy a model by using Amazon SageMaker Autopilot. Create a real-time endpoint that the web application invokes when new photos are uploaded.
- B. Create an Amazon CloudFront function that uses Amazon Comprehend to detect unwanted content. Associate the function with the web application.
- **C. Create an AWS Lambda function that uses Amazon Rekognition to detect unwanted content. Create a Lambda function URL that the web application invokes when new photos are uploaded.**
- D. Create an AWS Lambda function that uses Amazon Rekognition Video to detect unwanted content. Create a Lambda function URL that the web application invokes when new photos are uploaded.

Answer: C

Explanation:

Amazon Rekognition provides pretrained models that can detect inappropriate or unsafe content (such as nudity or violence) without requiring users to build their own ML models. Using a Lambda function to call Rekognition when new photos are uploaded is a serverless and scalable solution.
