SAP C-TS414-2023시험대비 덤프공부, C-TS414-2023시험대비 인증덤프

여러분은 우리 Pass4Test의 SAP C-TS414-2023 시험자료 즉 덤프의 문제와 답만 있으시면 SAP C-TS414-2023 인증 시험을 아주 간단하게 패스하실 수 있습니다. 그리고 관련 업계에서 여러분의 지위상승은 자연적 이로 이루어집니다. Pass4Test의 덤프를 장바구니에 넣으세요. 그리고 Pass4Test에서는 무료로 24시간 온라인상담이 있습니다.

최신 SAP Certified Associate C-TS414-2023 무료 샘플문제 (Q26-Q31):

질문 # 26

The receipt of a quality certificate should be recorded independently from the goods receipt. What is the necessary setting to fulfill this requirement?

- A. Assignment of a status profile in the certificate type
- B. Indicator for enhanced certificate processing in the certificate type
- C. Control of certificate receipt in the quality info record: Procurement
- D. Assignment of a status profile in the certificate profiles

정답: C

설명:

To record quality certificate receipt independently from goods receipt (GR) in SAP S/4HANA QM, the system must decouple these processes:

* Control of Certificate Receipt in the Quality Info Record: Procurement (B): In the quality info record (transaction QI01), the "Certificate Control" settings (e.g., "Certificate Required" and "Check at GR" unchecked) allow certificate receipt to be recorded separately (e.g., via transaction QC55) before or after GR. This is the standard setting to achieve independence, ensuring the GR posts to blocked stock or proceeds without certificate enforcement at that step (SPRO > QM > Quality Certificates > Procurement).

* Assignment of a Status Profile in the Certificate Profiles (A): Certificate profiles (transaction QC01) define outgoing certificates, not incoming certificate receipt processes.

* Indicator for Enhanced Certificate Processing in the Certificate Type (C): The certificate type (SPRO > QM > Quality Certificates > Define Certificate Types) has an "Enhanced Processing" indicator, but it relates to certificate creation, not independent receipt recording.

* Assignment of a Status Profile in the Certificate Type (D): Status profiles in certificate types manage certificate statuses, not GR independence.

Thus, "Control of certificate receipt in the quality info record: Procurement" is the correct answer. References:

SAP Help Portal - "Certificate Receipt in Procurement"; SAP S/4HANA QM Customizing Guide - "Quality Certificates".

질문 # 27

you can assign combination of material number and plants to one inspection plan Which organization structure must the plants share for correct cost collection in the inspection handlings ?

- A. Controlling Area
- B. Sales organization
- C. Company code
- D. Purchase organization

정답: A

질문 # 28

To what can you assign the inspection method in the inspection planning? Note: There are 2 correct answers to this question.

- A. Master inspection characteristic
- B. Work center
- C. Selected set
- D. Inspection characteristic in an operation of an inspection plan

정답: A,D

설명:

Inspection methods in SAP S/4HANA QM (transaction QK01) define how an inspection is performed and can be assigned to specific objects in inspection planning:

* Master Inspection Characteristic (B): In the MIC master data (transaction QS21/QS23), you can assign an inspection method to specify the procedure (e.g., "Visual inspection"). This is a standard assignment to ensure consistency across plans.

* Inspection Characteristic in an Operation of an Inspection Plan (D): Within an inspection plan (transaction QP01), you can assign an inspection method directly to a characteristic in an operation.

This overrides or supplements the MIC's method if needed, providing flexibility during planning.

* Selected Set (A): Selected sets (transaction QS51) are for qualitative codes, not for assigning inspection methods.

* Work Center (C): Work centers define where an inspection occurs but do not directly accept inspection method assignments in standard SAP QM.

Thus, "Master inspection characteristic" and "Inspection characteristic in an operation of an inspection plan" are the correct answers. References: SAP Help Portal - "Inspection Methods in QM"; SAP S/4HANA QM User Guide - "Inspection Planning".

질문 # 29

You have created a new business inspection process and need to customize a new inspection type. Which of the following activities are mandatory? Note: There are 2 correct answers to this question.

- A. Define default values for the new inspection type
- B. Assign the new inspection type to a predefined inspection lot origin
- C. Assign a task list type to the new inspection type
- D. Assign the new inspection type to a number range

정답: B,C

설명:

Creating a new inspection type in SAP QM (SPRO > QM > Quality Inspection > Inspection Lot Creation > Maintain Inspection Types) requires:

* Assign a Task List Type to the New Inspection Type (A): The inspection type (e.g., custom Z01) must be linked to a task list type (e.g., Q for inspection plans) to define the inspection scope, a mandatory step.

* Assign the New Inspection Type to a Predefined Inspection Lot Origin (C): The type must be assigned to an inspection lot origin (e.g., 01 for GR) to determine when lots are created, a required configuration.

* Assign the New Inspection Type to a Number Range (B): Number ranges are assigned to origins, not directly to types, so this is optional.

* Define Default Values for the New Inspection Type (D): Defaults (e.g., UD settings) are optional enhancements, not mandatory.

Thus, "Assign a task list type to the new inspection type" and "Assign the new inspection type to a predefined inspection lot origin" are the correct answers. References: SAP Help Portal - "Customizing Inspection Types"; SAP S/4HANA QM Customizing Guide - "Inspection Lot Creation".

질문 # 30

An inspection plan group includes multiple inspection plans with different group counters. What determines the selected inspection plan when you create an inspection lot?

- A. Procurement type of the material
- B. Sample size
- C. Lot size
- D. Material type

정답: C

질문 # 31
