ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q192-Q197):

NEW QUESTION # 192

Client-side scripts manage what?

- A. Playbook access
- B. Forms and Forms Fields
- C. User access
- D. Database and backend

Answer: D

Explanation:

https://docs.servicenow.com/bundle/tokyo-application-development/page/script/server-scripting/concept/c_ServerScripting.html

NEW QUESTION # 193

Which methods can be used to install an application on a ServiceNow instance?

Choose 3 answers

- A. Import an application from an XML file
- B. Install from the Google Play Store
- C. Install an application from the Application Repository
- D. Use the 'Install' button on the application record
- E. Download and install a third-party application from the ServiceNow Store
- F. Download from Stack Overflow

Answer: A,C,E

Explanation:

ServiceNow provides several methods to install applications onto an instance, each suited to different scenarios:

Import an Application from an XML File (Option A):

Description: Developers can export an application as an XML file and then import it into another ServiceNow instance.

Use Case: This method is commonly used for moving applications between instances, such as from development to production.

Procedure:

Navigate to "System Applications" > "Applications."

Click on the "Import" button.

Upload the XML file of the application.

Reference:

Install an Application from the Application Repository (Option E):

Description: The Application Repository is a centralized location within ServiceNow where developers can publish applications.

Instances with the appropriate permissions can install these applications directly.

Use Case: Ideal for deploying custom applications across multiple instances within the same organization.

Procedure:

Navigate to "System Applications" > "All Available Applications" > "All." Search for the desired application.

Click "Install" to add it to your instance.

Download and Install a Third-Party Application from the ServiceNow Store (Option F):

Description: The ServiceNow Store offers a marketplace of third-party applications that extend the platform's capabilities.

Use Case: When seeking pre-built solutions or integrations developed by third-party vendors.

Procedure:

Visit the ServiceNow Store.

Browse or search for the desired application.

Click "Get" or "Request App" to initiate the installation process.

Incorrect Options:

Option B: Use the 'Install' button on the application record - This option is not a standard method for installing applications in ServiceNow. Applications are typically installed via the Application Repository, the ServiceNow Store, or by importing XML files.

Option C: Install from the Google Play Store - The Google Play Store is intended for Android applications and is not used for ServiceNow application installations.

Option D: Download from Stack Overflow - Stack Overflow is a platform for asking and answering programming questions and does not host ServiceNow applications for download.

NEW QUESTION # 194

Which items are valid UI Action types in ServiceNow?

Choose 3 answers

- A. Workflow Action
- B. Record Navigation Button
- C. Form Button
- D. List Banner Button
- E. Form Choice
- F. List Choice

Answer: B,C,D

Explanation:

In ServiceNow, UI Actions are elements such as buttons, links, and context menu items that allow users to perform actions on records or lists. The three valid UI Action types are:

1. List Banner Button (Option A)

* Description: A button that appears in the list view header, allowing users to trigger an action affecting multiple records at once.

* Example: A "Bulk Approve" button that processes selected records.

2. Form Button (Option B)

* Description: A button that appears on a form, allowing users to trigger actions related to the current record.

* Example: A "Submit for Approval" button on an incident form.

3. Record Navigation Button (Option D)

* Description: A button that helps users navigate between related records.

* Example: A "Go to Parent Record" button that redirects users to a linked record.

Incorrect Options:

* Form Choice (Option C):

* Not a UI Action type. Choices are typically used in choice fields (dropdowns) rather than UI actions.

* List Choice (Option E):

* Not a valid UI Action type. Similar to "Form Choice," it pertains to field options rather than UI elements.

* Workflow Action (Option F):

* Workflows are process automation tools, not UI Actions. They are not directly related to buttons or links that users interact with.

Reference: For more details, see the official ServiceNow documentation on UI Actions.

NEW QUESTION # 195

An application called My App has a table, MyAppTable, with the following Application Access configuration:

Accessible from: All application scopes

Can read: Selected

Can delete: Not selected

Allow configuration: Selected

Which of the following is true based on this configuration?

- A. Any application developer can write a Business Rule which successfully deletes all records from the MyAppTable
- B. An application developer working in the My App scope can write a Business Rule for the MyAppTable which successfully deletes all records from the MyAppTable
- C. No Business Rule can be written which successfully deletes all records from the MyAppTable
- D. An application developer working in another privately scoped application can write a Business Rule for the MyAppTable which successfully deletes all records

Answer: C

NEW QUESTION # 196

How does the Application Picker interact with Application Scope in ServiceNow?

- A. Selecting an application from the Application Picker sets the Application Scope.
- B. Selecting an application from the Application Picker does not set the Application Scope.
- C. Global is a reserved application which does not appear in the Application Picker.
- D. Selecting Global in the Application Picker sets the Application Scope to Incident.

Answer: A

Explanation:

In ServiceNow, the Application Picker is a tool that allows developers to select the active application scope.

When an application is selected from the Application Picker, it sets the Application Scope to that application.

This means that any configurations, scripts, or customizations made will be associated with the selected application's scope.

Therefore, the correct answer is D.

The other options are incorrect:

- * A. Selecting Global in the Application Picker sets the Application Scope to Incident: Selecting "Global" sets the scope to the global application, not specifically to Incident.
- * B. Global is a reserved application which does not appear in the Application Picker: The Global application does appear in the Application Picker and can be selected.
- * C. Selecting an application from the Application Picker does not set the Application Scope: Selecting an application does set the Application Scope.

For more detailed information, refer to the official ServiceNow documentation on Application Scope.
