PTC-AMCA Valid Exam Notes, PTC-AMCA Valid Exam Duration

As the quick development of the world economy and intense competition in the international, the world labor market presents many new trends: company's demand for the excellent people is growing. As is known to us, the PTC-AMCA certification is one mainly

mark of the excellent. If you don't have enough ability, it is very possible for you to be washed out. On the contrary, the combination of experience and the PTC-AMCA Certification could help you resume stand out in a competitive job market.

Medical Technology AMCA Phlebotomy Technician Certification Exam Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which of the following pieces of information does NOT have to be provided to patients as part of informed consent?

- A. Cost of testing
- B. Risks
- C. Methods
- D. Benefits

Answer: A

Explanation:

The information that does not have to be provided to patients as part of informed consent is the cost of testing; however, if the cost is extremely high, patients should be made aware of this, especially if they lack insurance. Patients do need to be aware of the methods used to conduct the test the risks of the test, and the benefits. If alternate methods of testing are available, patients should also be apprised of these so that they have the option to choose.

NEW QUESTION # 60

When carrying out a heelstick blood collection on a newborn, what should the maximum depth of the puncture be?

- A. 2 mm
- B. 3 mm
- C. 1 mm
- D. 1.5 mm

Answer: A

Explanation:

When carrying out a heelstick blood collection on a newborn, the depth of the puncture should be equal to or less than 2 mm. In a newborn, the blood supply is typically located 0.35-1.6 mm below the skin. Thus, a 2 mm depth provides an adequate flow of blood but is generally too shallow to cause injury to the calcaneus. The heelstick should be done on the lateral aspects of the heel rather than the middle or posterior aspects to ensure that the calcaneus is avoided.

NEW QUESTION # 61

If 3 tubes, each containing 2 mL of CSF, are collected, which tube should be used for C&S?

- A. First
- B. Third
- C. Second
- D. Order does not matter

Answer: C

Explanation:

If 3 tubes, each containing 2 mL of CSF (cerebrospinal fluid) are collected, the collection tube that should be used for CRS is the second tube. The specimen in the first tube is used for chemistry and immunological testing but may be contaminated with bacteria found on the skin, so it is not appropriate for C&S. The specimen in the second tube should not be contaminated with skin bacteria. The specimen in the third tube is used for cellular examination.

NEW QUESTION # 62

Which of the following POC tests is used to determine a patient's response to aspirin therapy?

- A. ACT
- B. PT/INR
- C. APTT
- **D. Platelet function**

Answer: D

Explanation:

The platelet function test is used to determine a patient's response to aspirin therapy or other antiplatelet therapies. This test is also used to assess a patient's response to medications before cardiac catheterization or surgery. Platelet function tests can help clinicians assess and predict the risk of bleeding and of thrombosis associated with platelet dysfunction before, during, and after the procedures.

NEW QUESTION # 63

If a phlebotomist is asked to transport a nonblood specimen, such as a urine sample, to the laboratory for testing, the phlebotomist should:

- A. Accept the specimen for transport.
- B. Check with the laboratory supervisor regarding the transport.
- **C. Verify that the sample is labeled correctly.**
- D. Refuse to accept the specimen for transport.

Answer: C

Explanation:

If the phlebotomist is asked to transport a nonblood specimen, such as a urine sample, to the laboratory for testing, the phlebotomist should verify that the specimen is labeled correctly. The label should be on the container and not the lid (which must be removed for testing) and should contain the same type of identifying information as on the blood sample containers. Additionally, the type and source of the sample should be identified on the label because different types of samples may have similar appearances.

NEW QUESTION # 64

.....

You can install Medical Technology PTC-AMCA PRACTICE TEST file and desktop practice test software on your devices and easily start AMCA Phlebotomy Technician Certification Exam (PTC-AMCA) exam preparation right now. Whereas the "Itbraindumps" PTC-AMCA web-based practice test software is concerned, it is a simple browser-based application that works with all the latest web browsers.
