

CloudSec-Pro최고품 질인증 시험공부자료 & CloudSec-Pro인기덤프공부

Fast2test에서 판매하고 있는 Palo Alto Networks CloudSec-Pro인증시험자료는 시중에서 가장 최신버전으로서 시험적 중율이 100%에 가깝습니다. Palo Alto Networks CloudSec-Pro덤프자료를 항상 최신버전으로 보장해드리기 위해Palo Alto Networks CloudSec-Pro시험문제가 변경되면 덤프자료를 업데이트하도록 최선을 다하고 있습니다. Fast2test는 여러분이 자격증을 취득하는 길에서 없어서는 안되는 동반자로 되어드릴것을 약속해드립니다.

우리Fast2test 에서 여러분은 아주 간단히Palo Alto Networks CloudSec-Pro시험을 패스할 수 있습니다. 만약 처음Palo Alto Networks CloudSec-Pro시험에 도전한다면 우리의Palo Alto Networks CloudSec-Pro시험자료를 선택하여 다운받고 고부를 한다면 생각보다는 아주 쉽게Palo Alto Networks CloudSec-Pro시험을 통과할 수 있으며 무엇보다도 시험시의 자신감 충만에 많은 도움이 됩니다. 다른 자료판매사이트도 많겠지만 저희는 저희 자료에 자신이 있습니다. 우리의 시험자료는 모두 하이퀄리티한 문제와 답으로 구성되었습니다, 그리고 우리는 업데이트를 아주 중요시 생각하기에 어느 사이트보다 더 최신버전을 보실 수 있을것입니다. 우리의Palo Alto Networks CloudSec-Pro자료로 자신만만한 시험 준비하시기를 바랍니다. 우리를 선택함으로 자신의 시간을 아끼는 셈이라고 생각하시면 됩니다.Palo Alto Networks CloudSec-Pro로 빠른시일내에 자격증 취득하시고Palo Alto NetworksIT업계중에 엘리트한 전문가되시기를 바랍니다.

Palo Alto Networks CloudSec-Pro인기덤프공부 - CloudSec-Pro최신버전 인기덤프

Fast2test 의 Palo Alto Networks인증 CloudSec-Pro시험에 도전장을 던지셨나요? 현황에 만족하지 않고 열심히 하는 모습에 박수를 보내드립니다. Palo Alto Networks인증 CloudSec-Pro시험을 학원등록하지 않고 많은 공부자료 필요없이Fast2test 에서 제공해드리는 Palo Alto Networks인증 CloudSec-Pro덤프만으로도 가능합니다. 수많은 분들이 검증한Palo Alto Networks인증 CloudSec-Pro덤프는 시장에서 가장 최신버전입니다.가격도 친근하구요.

최신 Cloud Security Engineer CloudSec-Pro 무료샘플문제 (Q160-Q165):

질문 # 160

Match the correct scanning mode for each given operation.

(Select your answer from the pull-down list. Answers may be used more than once or not at all.)

정답:

설명:

Explanation:

* Create SNS Topic Triggers: No data security scan

- * Select an S3 bucket: Forward Scan only
- * Select an S3 bucket with existing files: Forward or Backward Scan
- * Link an S3 logging to CloudTrail: Backward Scan only

The scanning mode for Data Security in AWS typically depends on the configuration and the desired outcomes for monitoring and protecting data within S3 buckets.

Creating SNS Topic Triggers is a configuration step that does not directly involve scanning. It is part of setting up notifications for events in S3 buckets, but on its own, it does not initiate a data security scan.

Selecting an S3 bucket without specifying existing files typically implies that you intend to scan new objects as they are added to the bucket, which is known as a Forward Scan. This mode is proactive and scans files upon their arrival in the bucket.

When you select an S3 bucket with existing files, you can perform either Forward Scanning for new files or Backward Scanning to scan all existing files in the bucket. This option provides the most comprehensive scanning coverage for both new and existing data. Linking an S3 logging to CloudTrail is usually a step taken to monitor access and changes to S3 resources. In the context of scanning, linking S3 to CloudTrail does not initiate a scan, but the CloudTrail logs can be used to trigger a Backward Scan if configured to do so, which scans historical files in the bucket based on CloudTrail events.

질문 # 161

Which "kind" of Kubernetes object is configured to ensure that Defender is acting as the admission controller?

- A. DestinationRules
- B. MutatingWebhookConfiguration
- C. ValidatingWebhookConfiguration
- D. PodSecurityPolicies

정답: C

설명:

In the context of Kubernetes, an admission controller is a piece of code that intercepts requests to the Kubernetes API server before the persistence of the object, but after the request is authenticated and authorized. The admission controller lets you apply complex validation and policy controls to objects before they are created or updated.

The ValidatingWebhookConfiguration is a Kubernetes object that tells the API server to send an admission validation request to a service (the admission webhook) when a request to create, update, or delete a Kubernetes object matches the rules defined in the configuration. The webhook can then approve or deny the request based on custom logic.

The MutatingWebhookConfiguration is similar but is used to modify objects before they are created or updated, which is not the primary function of an admission controller acting in a protective or validating capacity.

DestinationRules are related to Istio service mesh and are not relevant to Kubernetes admission control.

PodSecurityPolicies (PSPs) are a type of admission controller in Kubernetes but they are predefined by Kubernetes and do not require a specific configuration object like ValidatingWebhookConfiguration. PSPs are also deprecated in recent versions of Kubernetes.

Therefore, the correct answer is C. ValidatingWebhookConfiguration, as it is the Kubernetes object used to configure admission webhooks for validating requests, which aligns with the role of Defender acting as an admission controller in Prisma Cloud.

References from the provided documents:

* The documents uploaded do not contain specific details about Kubernetes objects or Prisma Cloud's integration with Kubernetes. However, this explanation aligns with general Kubernetes practices and Prisma Cloud's capabilities in securing Kubernetes environments.

질문 # 162

Which role must be assigned to DevOps users who need access to deploy Container and Host Defenders in Compute?

- A. Build and Deploy Security
- B. Cloud Provisioning Admin
- C. System Admin
- D. Developer

정답: B

설명:

Cloud Provisioning Admin (Defender Manager) DevOps team members that need to manage Defender deployments without

sysadmin privileges. https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/authentication/prisma_cloud_user_roles

질문 # 163

Which command should be used in the Prisma Cloud twistcli tool to scan the nginx:latest image for vulnerabilities and compliance issues?

- A)
- B)
- C)
- D)

- A. Option C
- B. Option A
- C. Option B
- D. Option D

정답: D

설명:

The correct command to scan the nginx:latest image for vulnerabilities and compliance issues using the Prisma Cloud twistcli tool is shown in Option D. This command uses twistcli images scan with specified parameters for the console address, username, and password, and it outputs the results to a file named scan- results.json. This allows for the scanning results to be saved and reviewed in a structured format, which aids in further analysis and tracking of vulnerabilities and compliance issues.

질문 # 164

While writing a custom RQL with array objects in the investigate page, which type of auto-suggestion a user can leverage?

- A. Auto-suggestion for array objects that are useful for categorization of resource parameters
- B. Auto-suggestion for array objects that are useful for comparing between array elements
- C. Auto-suggestion for array objects that are useful for comparing between arrays
- D. Auto-suggestion is not available for array objects

정답: D

설명:

The auto suggest works with the operators = and IN . It is not supported for array objects. Use cloud.type attribute to refine the search results. <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-rql-reference/rql-reference/event-query/event-query-attributes>
