Free PDF Salesforce - Development-Lifecycle-and-Deployment-Architect - High Pass-Rate Salesforce Certified Development Lifecycle and Deployment Architect New Learning Materials

There is no another great way to pass the Salesforce Development-Lifecycle-and-Deployment-Architect exam in the first attempt only by doing a selective study with valid Development-Lifecycle-and-Deployment-Architect braindumps. If you already have a job and you are searching for the best way to improve your current Development-Lifecycle-and-Deployment-Architect test situation, then you should consider the Development-Lifecycle-and-Deployment-Architect Exam Dumps. By using our updated Development-Lifecycle-and-Deployment-Architect products, you will be able to get reliable and relative Development-Lifecycle-and-Deployment-Architect exam prep questions, so you can pass the exam easily. You can get one-year free Development-Lifecycle-and-Deployment-Architect exam updates from the date of purchase.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q127-Q132):

NEW QUESTION # 127

A developer with Universal Containers recently created a flow in the developer sandbox. While working on the flow, the developer deactivated it and made updates multiple times before the flow worked as desired. Now the developer is planning to use a change set to migrate the flow to the QA sandbox.

What two statements should be considered when migrating the flow with change sets?

Choose 2 answers

- A. When a change set with a multiple versioned flow is uploaded, and no active version is available, it includes the most recent inactive version of the flow.
- B. When a change set with a multiple versioned flow is uploaded, it includes all the versions of the flow.
- C. When a change set with a multiple versioned flow is uploaded, and no active version is available, it throws an exception.
- D. When a change set with a multiple versioned flow is uploaded, it includes only the active version of the flow.

Answer: A,D

Explanation:

When migrating a flow with change sets, the following statements should be considered: When a change set with a multiple versioned flow is uploaded, it includes only the active version of the flow. When a change set with a multiple versioned flow is uploaded, and no active version is available, it includes the most recent inactive version of the flow. These statements are based on the Salesforce documentation on how change sets handle flows with multiple versions. The other statements are incorrect, as they do not reflect the actual behavior of change sets.

NEW QUESTION # 128

Universal Containers has seven orgs in different regions. Its processes are global and standardized but each region needs the flexibility to be able to understand the global code and customize some aspects for its regions.

Which development model is optimized for this need?

- A. Create a centralized Git with all the code and where the global team approves the changes made by the local teams.
- B. Use a managed package for global code and another managed package for all regions code.
- C. Use a managed package to deploy the global code and allow local teams to request the addition of code within that package.
- D. Use unlocked packages to deploy the global code and allow each country to create its customized unlocked package extensions,

Answer: A

NEW QUESTION # 129

Northern Trail Outfitters (NTO) has well-defined release management processes for both large and small projects. NTO's development team created a workflow and a trigger for the changes in its opportunity renewal process.

What should the architect recommend for release planning of these changes?

- A. Plan this as a patch release and align with the Salesforce patch release.
- B. Plan this as a minor release with training and change management.
- C. Plan this as a major release and align with a Salesforce major release.
- D. Plan this as an interim release after checking with Salesforce support.

Answer: B

Explanation:

Explanation

A workflow and a trigger are considered minor changes that do not require alignment with a Salesforce major or patch release. However, they still need proper testing, training, and change management before being deployed to production. Therefore, the architect should plan this as a minor release with training and change management.

NEW QUESTION # 130

Universal Containers (UC) is planning for a huge data migration from a home-grown on-premise system to Salesforce as part of their Service Cloud Implementation. UC has approximately 5 million customers, 10 million contacts, and 30 million active cases. Which are the three key areas that should be tested as part of Data Migration? Choose 3 answers

- **A. Data transformation against the source system.**
- B. Case assignment rules and escalation rules.
- **C. Case Ownership along with associated entitlement and milestones.**
- **D. Case association with correct contact and Account.**
- E. Page Layout assignment to the profiles

Answer: A,C,D

Explanation:

Explanation

These are the correct answers because they are related to the data quality and integrity of the migrated data.

Case association, case ownership, and data transformation are all important aspects of data migration that should be tested. Case assignment rules and escalation rules are not directly related to data migration, but rather to the business logic and workflow of the application. Page layout assignment is also not related to data migration, but rather to the user interface and security of the application.

NEW QUESTION # 131

What are two advantages of using an Agile Project Management tool? Choose 2 answers

- A. Better relationships with business stakeholders
- B. Improve governance with gate steps in development
- **C. Consolidate project artifacts to a common repository**
- **D. Increased visibility into sprint and project status**

Answer: C,D

Explanation:

A and C are the advantages of using an Agile Project Management tool, as they provide visibility into the project progress and status, and consolidate the project artifacts in a common repository. B is not an advantage of using an Agile Project Management tool, as it depends on the communication and collaboration skills of the team members and stakeholders. D is not an advantage of using an Agile Project Management tool, as it is more related to the governance framework and methodology of the project

NEW QUESTION # 132

.....
