

H35-211_V2.5 Flexible Testing Engine - H35-211_V2.5 Reliable Exam Braindumps

H35-211_V2.5

Question no 1

The maximum spectroscopic ratio supported by 10G EPON is? Option A : 1:256 (Laboratory).

Option B : 1:32

Option C : 1:128

Option D : 1:64

Correct Answer: A,C

Once you purchase our windows software of the H35-211_V2.5 training engine, you can enjoy unrestricted downloading and installation of our H35-211_V2.5 study guide. You need to reserve our installation packages of our H35-211_V2.5 learning guide in your flash disks. Then you can go to everywhere without carrying your computers. For it also supports the offline practice. And the best advantage of the software version is that it can simulate the real exam.

Upon passing the Huawei H35-211_V2.5 Exam, the candidate will be awarded the HCIP-Access V2.5 certification, which is recognized globally as a symbol of excellence in the field of access network technologies. HCIP-Access V2.5 certification will demonstrate the candidate's proficiency in designing, deploying, and maintaining access networks. It will also enhance the candidate's

career prospects, as many organizations prefer to hire certified professionals for their IT infrastructure management.

H35-211_V2.5 Flexible Testing Engine & Leading Offer in Certification Exams Products & H35-211_V2.5 Reliable Exam Braindumps

Our company always put the quality of the H35-211_V2.5 practice materials on top priority. In the past ten years, we have made many efforts to perfect our H35-211_V2.5 study materials. Our H35-211_V2.5 study questions cannot tolerate any small mistake. All staff has made great dedication to developing the H35-211_V2.5 Exam simulation. Our professional experts are devoting themselves on the compiling and updating the exam materials and our services are ready to guide you 24/7 when you have any question.

Huawei H35-211_V2.5 (HCIP-Access V2.5) certification exam is a valuable credential that can help IT professionals to demonstrate their proficiency in access network technologies. HCIP-Access V2.5 certification exam is recognized globally and can help professionals to advance their career in the field of access network technologies. HCIP-Access V2.5 certification can also help professionals to gain recognition from their peers and employers for their knowledge and skills in access network technologies.

Huawei HCIP-Access V2.5 Sample Questions (Q15-Q20):

NEW QUESTION # 15

(Multiple choice) Which of the following measures can be adopted by GPON in terms of traffic control

- A. Gem-car
- B. flow-car
- C. gem mapping
- D. tcontcar

Answer: A,B

NEW QUESTION # 16

(Radio) The device periodically sends and receives LACP packets to avoid information loss. If no LACPDU is received within () LACP interaction cycles, the system considers the member port Down.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

In IEEE 802.1AX/802.3ad LACP operation, timeout detection relies on a multiplier of three consecutive LACP intervals. In short-timeout mode, the default period is ~1 s; if 3 intervals pass without receiving LACPDUs, the peer is considered expired and the member is removed (treated as Down for aggregation).

Huawei implements this standard behavior for port-member validity in an Eth-Trunk.

(Reference: HCIP-Access V2.5 - Link Aggregation/LACP timers and member aging; IEEE LACP short-timeout 3× interval rule.)

NEW QUESTION # 17

The OLT is configured to use IGMP Version 2. When the OLT receives an IGMPv3 Join (Report) message forwarded from an ONT, what action will it take?

- A. Send a specific-group query message
- B. Discard directly
- C. Send a general (universal) group query message
- D. Normal forwarding

Answer: B

Explanation:

Huawei multicast guidance stresses IGMP version compatibility: devices running an earlier version must interoperate only with hosts using the same or earlier version, otherwise v3 messages may not be processed.

In Huawei's multicast feature guidance for access devices (OLT side vs. user side), the behavior documented is that when the device is operating in IGMPv2, IGMPv3 Report messages from terminals are not processed- interoperation is restored only after the terminal/device side is downgraded to v2 (often driven by periodic queries that induce hosts to respond in v2). This maps operationally to dropping unsolicited IGMPv3 Reports when the OLT is fixed to v2. Huawei also recommends ensuring the device runs an IGMP version the same as or later than member hosts to avoid such loss. Therefore, with OLT fixed at v2, an incoming v3 Join is discarded.

NEW QUESTION # 18

During troubleshooting, you can obtain multiple requests and response messages in a session by capturing packets. Which of the following options can be used to confirm the mapping between requests and response packets?

- A. CSeq
- B. From
- C. Tag
- D. Branch ID

Answer: A

Explanation:

In SIP message correlation, a response matches a request using the CSeq header (method and sequence number) together with the dialog identifiers (Call-ID, From/To with tags). Among the options, CSeq is the direct, standard field used to pair a specific request with its corresponding response within the same dialog.

References: HCIP-Access V2.5 (SIP message structure and troubleshooting: CSeq-based mapping of requests /responses).

NEW QUESTION # 19

Which of the following statements about terminal selection principles are correct?

- A. Project requirements do not need to be considered.
- B. Special requirements must be considered.
- C. Cost needs to be considered.
- D. Terminal types should be selected based on the network construction mode.

Answer: B,C,D

Explanation:

Terminal (ONT/ONU/CPE) selection adheres to engineering principles: align model and interfaces with the deployment mode and scenario, evaluate TCO/cost, and satisfy special requirements (such as PoE, Wi-Fi specs, voice/FXS, industrial temperature). Ignoring project requirements is contrary to standard design workflows; therefore D is not correct.

NEW QUESTION # 20
