2026 Exam PSE-Cortex-Pro-24 Passing Score | Reliable PSE-Cortex-Pro-24 100% Free Valid Exam Sims
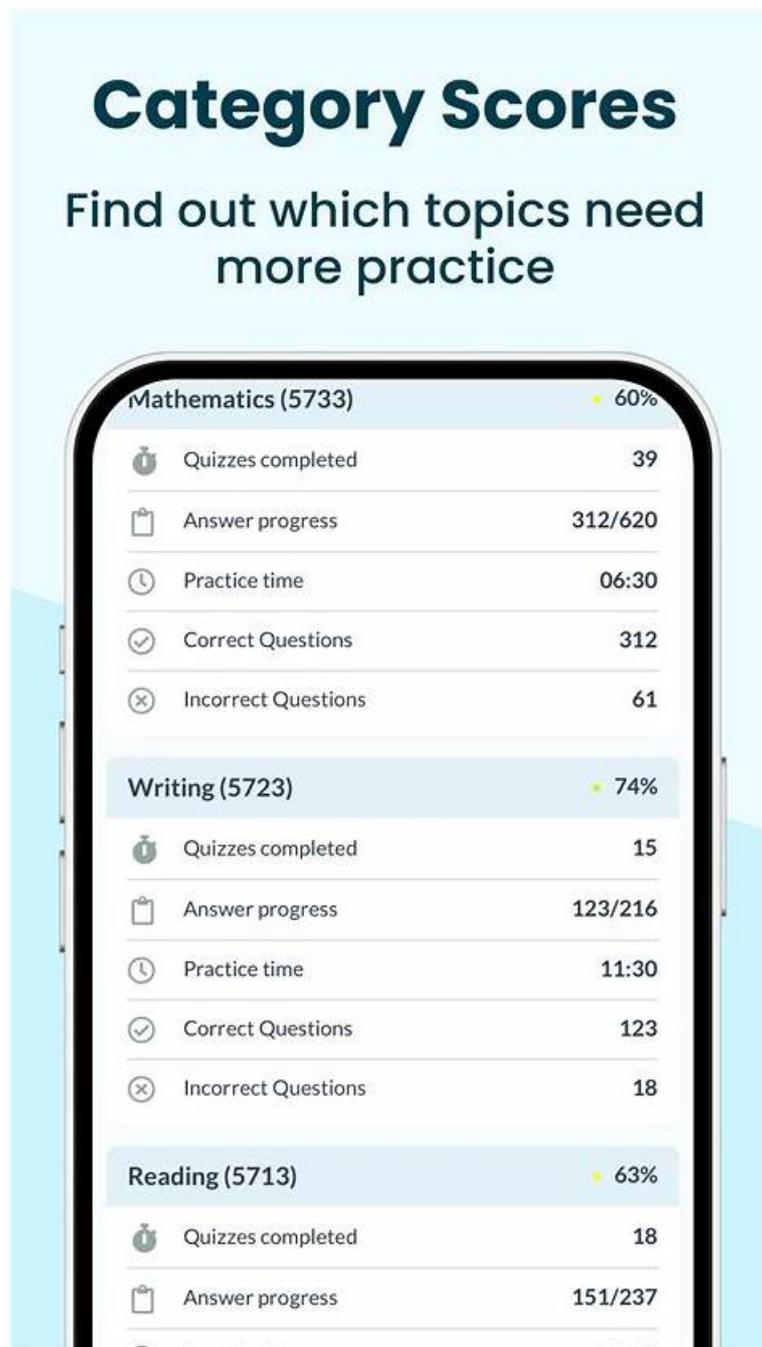

Using a smartphone, you may go through the Palo Alto Networks PSE-Cortex-Pro-24 dumps questions whenever and wherever you desire. The PSE-Cortex-Pro-24 PDF dumps file is also printable for making handy notes. ActualPDF has developed the online Palo Alto Networks PSE-Cortex-Pro-24 practice test to help the candidates get exposure to the actual exam environment. By practicing with web-based Palo Alto Networks PSE-Cortex-Pro-24 Practice Test questions you can get rid of exam nervousness. You can easily track your performance while preparing for the Palo Alto Networks Systems Engineer Professional - Cortex exam with the help of a self-assessment report shown at the end of Palo Alto Networks PSE-Cortex-Pro-24 practice test.

The clients can download our products and use our PSE-Cortex-Pro-24 study materials immediately after they pay successfully with

their credit cards. Our system will send our PSE-Cortex-Pro-24 learning prep in the form of mails to the client in 5-10 minutes after their successful payment. The mails provide the links and if only the clients click on the links they can log in our software immediately to learn our PSE-Cortex-Pro-24 Guide materials. If there are something they can't understand, they can contact with our service and we will solve them right away.

Buy Palo Alto Networks PSE-Cortex-Pro-24 Latest Dumps Today and Save Money with Free Updates

You will become accustomed to and familiar with the free demo for Palo Alto Networks PSE-Cortex-Pro-24 Exam Questions. Exam self-evaluation techniques in our PSE-Cortex-Pro-24 desktop-based software include randomized questions and timed tests. These tools assist you in assessing your ability and identifying areas for improvement to pass the Palo Alto Networks Palo Alto Networks Systems Engineer Professional - Cortex exam.

Palo Alto Networks Systems Engineer Professional - Cortex Sample Questions (Q72-Q77):

NEW QUESTION # 72
A Cortex Xpanse customer receives an email regarding an upcoming product update and wants to get more information on the new features.
In which resource can the customer access this information?

- **A. Release Notes**
- B. Administrator Guide
- C. LIVEcommunitv
- D. Compatibility Matrix

Answer: A

Explanation:
The Release Notes are the resource where the customer can access information about upcoming product updates and the new features included. Release Notes provide detailed descriptions of new features, improvements, bug fixes, and any other important changes to the product.

NEW QUESTION # 73
How can the required log ingestion license be determined when sizing a Cortex XSIAM deployment?

- A. Ask the customer to provide average daily alert volume.
- B. Ask the customer for average log ingestion estimates from their existing SIEM.
- **C. Use the Cortex Data Lake Calculator to estimate the volume of third-party logs.**
- D. Count the number of correlation sources and multiply by desired retention days.

Answer: C

NEW QUESTION # 74
Which process in the causality chain does the Cortex XDR agent identify as triggering an event sequence?

- A. the adversary's remote process
- **B. The causality group owner**
- C. the chain's alert initiator
- D. the relevant shell

Answer: B

NEW QUESTION # 75

What must a customer deploy prior to collecting endpoint data in Cortex XSIAM?

- A. Playbook
- B. XDR agent
- C. Broker VM
- D. External dynamic list

Answer: B

Explanation:

25 web pages

As a Palo Alto Cortex Professional, I'll provide a detailed explanation for Question 118: What must a customer deploy prior to collecting endpoint data in Cortex XSIAM? along with the reasoning and references based on Palo Alto Networks' official documentation and product knowledge.

C: XDR Agent

Cortex XSIAM (Extended Security Intelligence and Automation Management) is an AI-driven security operations platform designed to centralize and automate security operations across an enterprise, including endpoint, network, cloud, and identity data. To collect endpoint data specifically, Cortex XSIAM relies on the Cortex XDR Agent, which is a lightweight software component installed on endpoints (such as laptops, desktops, or servers). This agent is responsible for gathering telemetry data, monitoring endpoint activity, and enforcing security policies, which are then sent to the Cortex XSIAM cloud for analysis, detection, and response.

Here's why the XDR Agent is the correct choice and why the other options do not apply:

Option A: Playbook

* Explanation: A playbook in Cortex XSIAM (or its predecessor, Cortex XSOAR) is a predefined workflow that automates incident response tasks, such as investigating alerts or remediating threats.

While playbooks are critical for automation and orchestration, they are not involved in the initial collection of endpoint data. Playbooks operate on data that has already been collected and ingested into the system. Therefore, deploying a playbook is not a prerequisite for collecting endpoint data.

* Conclusion: Incorrect.

Option B: Broker VM

* Explanation: The Broker VM is an optional component in the Cortex ecosystem that can be deployed to enhance connectivity and functionality, such as acting as a proxy for endpoints to communicate with the Cortex cloud, collecting logs, or running additional services. While it can facilitate data forwarding or log collection in certain scenarios (e.g., from third-party sources), it is not a mandatory requirement for collecting endpoint data directly from devices managed by Cortex XSIAM. The XDR Agent can communicate with the Cortex cloud independently without a Broker VM.

* Conclusion: Incorrect.

Option C: XDR Agent

* Explanation: The Cortex XDR Agent is the core component required to collect endpoint data in Cortex XSIAM. It is installed on supported endpoints (e.g., Windows, macOS, Linux, or Android devices) and performs several key functions:

* Data Collection: Gathers detailed telemetry, including process execution, file activity, network connections, and system events.

* Prevention: Blocks exploits, malware, and fileless attacks using AI-driven techniques.

* Detection and Response: Provides real-time data to the Cortex cloud for advanced analytics and incident investigation. Without the XDR Agent deployed on endpoints, Cortex XSIAM cannot collect the necessary data to monitor, detect, or respond to endpoint-based threats. This makes it the essential prerequisite for endpoint data collection.

* Conclusion: Correct.

Option D: External Dynamic List (EDL)

* Explanation: An External Dynamic List (EDL) is a feature in Palo Alto Networks' ecosystem used to import and manage dynamic lists of indicators (e.g., IP addresses, URLs, or domains) for use in security policies or threat intelligence. While EDLs can enhance threat detection by providing additional context, they are not involved in the process of collecting endpoint data. They are a supplementary tool rather than a requirement for data collection.

* Conclusion: Incorrect.

References from Palo Alto Networks:

* Cortex XSIAM Datasheet (Palo Alto Networks):

* "Cortex XSIAM unifies best-in-class security operations functions, including Endpoint Detection and Response (EDR)... The platform leverages the Cortex XDR Agent to prevent endpoint attacks and collect full telemetry for detection and response."

* This highlights the XDR Agent's role as the mechanism for endpoint data collection.

* Cortex XSIAM Solution Brief (Palo Alto Networks):

* "XSIAM requires the deployment of the XSIAM Endpoint Agent to appropriate and compatible endpoints to collect telemetry and enforce security."

* This directly ties the agent to the data collection process.

* Cortex XDR Agent Documentation (Palo Alto Networks Cortex Documentation Portal):

* The agent is described as "a lightweight agent that stops threats with Behavioral Threat Protection, AI, and cloud-based analysis while collecting endpoint telemetry for extended detection and response."
* Available at: docs-cortex.paloaltonetworks.com.
* What is Cortex XSIAM? (Palo Alto Networks Website):
* "Endpoint Protection Platform (EPP): Prevents endpoint attacks with a proven endpoint agent that blocks exploits, malware, and fileless attacks and collects full telemetry for detection and response."
* This reinforces the agent's foundational role in endpoint data collection.

NEW QUESTION # 76

Which playbook feature allows concurrent execution of tasks?

- **A. parallel tasks**
- B. conditional tasks
- C. automation tasks
- D. manual tasks

Answer: A

Explanation:
