1/6

P.S. Free & New F5CAB5 dumps are available on Google Drive shared by GetValidTest: <https://drive.google.com/open?id=1P9-mmyIN1DXH7HnlgEppgQyRZ5tTP848>

The product is made in three different formats to help customers with different preparation styles meet their needs. One of these formats is F5 F5CAB5 Dumps PDF file which is printable and portable. Users can take F5 F5CAB5 PDF Questions anywhere and use them anytime. They can print these real F5CAB5 questions to save them as paper notes.

As is known to us, a suitable learning plan is very important for all people. For the sake of more competitive, it is very necessary for you to make a learning plan. We believe that our F5CAB5 actual exam will help you make a good learning plan. You can have a model test in limited time by our F5CAB5 Study Materials, if you finish the model test, our system will generate a report according to your performance. And in this way, you can have the best pass percentage on your F5CAB5 exam.

Exam F5CAB5 Topic, Valid F5CAB5 Test Dumps

The contents of F5CAB5 learning questions are carefully compiled by the experts according to the content of the F5CAB5 examination syllabus of the calendar year. They are focused and detailed, allowing your energy to be used in important points of knowledge and to review them efficiently. In addition, F5CAB5 Guide engine is supplemented by a mock examination system with a time-taking function to allow users to check the gaps in the course of learning.

F5 F5CAB5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Given a scenario, review basic stats to confirm functionality: This section involves interpreting traffic object statistics and network configuration statistics to validate system functionality.
Topic 2	<ul style="list-style-type: none">Determine resource utilization: This domain covers analyzing system resources including control plane versus data plane usage, CPU statistics per virtual server, interface statistics, and disk and memory utilization.
Topic 3	<ul style="list-style-type: none">Identify the reason load balancing is not working as expected: This domain addresses troubleshooting load balancing by analyzing persistence, priority groups, rate limits, health monitor configurations, and availability status.

F5 BIG-IP Administration Support and Troubleshooting Sample Questions (Q52-Q57):

NEW QUESTION # 52

Which command restarts a BIG-IP service?

- A. show sys service
- B. stop sys traffic
- C. reload sys config
- D. restart sys service <service_name>

Answer: D

Explanation:

Used to restart specific system services.

NEW QUESTION # 53

A Virtual Server uses an iRule to send traffic to pool members depending on the URI. The BIG-IP Administrator needs to modify the pool member in the iRule. Which event declaration does the BIG-IP Administrator need to change to accomplish this?

- A. CLIENT_ACCEPTED
- B. SERVER_CONNECTED
- C. HTTP_RESPONSE
- D. HTTP_REQUEST

Answer: D

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Support and Troubleshooting documents: In F5 TMOS administration, the traffic flow is processed through specific event huddles w3ithin iRules. To troubleshoot or m4odify traffic based on a URI (Uniform Resource Identifier), the BIG-IP system must first parse the application-layer data. The HTTP_REQUEST event is triggered when the system has fully received and parsed the HTTP request headers from the client5. This is the correct point to implement logic that selects a pool or pool member based on the path or file requested (e.g., /images or /api). Using CLIENT_ACCEPTED would be too early in the troubleshooting process because that event triggers at the L4 (TCP) connection establishment phase, before any URI information is available6. Conversely, HTTP_RESPONSE occurs during the return traffic from the server, which is too late to make a load balancing decision7. For troubleshooting virtual server behavior where URIs are involved, ensuring the iRule is attached to a Virtual Server with an HTTP profile and using the HTTP_REQUEST event is essential for proper traffic steering and inspection.

NEW QUESTION # 54

Refer to the exhibit.

Destination Address/Mask	192.168.162.80
Service Port	443 HTTPS
Notify Status to Virtual Address	<input checked="" type="checkbox"/>
Availability	Available (Enabled) - The virtual services available
Synccookie Status	Off
State	Enabled

Configuration: Basic

Protocol	TCP
Protocol Profile (Client)	f5-tcp-lan
Protocol Profile (Server)	(Use Client Profile)
HTTP Profile	http
HTTP Proxy Connect Profile	None
FTP Profile	None
RTSP Profile	None

SSL Profile (Client)	Selected	Available
	/Common clientssl	/Common clientssl-insecure-compatible clientssl-secure clientssl2 crypto-server-default-clientssl
SSL Profile (Server)	Selected	Available
		/Common apm-default-serverssl crypto-client-default-serverssl pcoip-default-serverssl serverssl

A BIG-IP Administrator needs to deploy an application on the BIG-IP system to perform SSL offload and re-encrypt the traffic to pool members. During testing, users are unable to connect to the application. What must the BIG-IP Administrator do to resolve the issue? (Choose one answer)

- A. Enable Forward Proxy in the SSL Profile (Client)
- B. Configure Protocol Profile (Server) as split-session-default-tcp
- C. Remove the configured SSL Profile (Client)
- **D. Configure an SSL Profile (Server)**

Answer: D

Explanation:

To successfully perform SSL offload and re-encryption on a BIG-IP system, the virtual server must be configured with both a Client SSL profile and a Server SSL profile. The Client SSL profile enables BIG-IP to decrypt inbound HTTPS traffic from clients, while the Server SSL profile is required to re-encrypt traffic before forwarding it to the pool members.

From the exhibit, the virtual server has a Client SSL profile configured, which allows BIG-IP to accept HTTPS connections from clients. However, there is no Server SSL profile attached, meaning BIG-IP attempts to send unencrypted HTTP traffic to pool members listening on HTTPS (port 443). This protocol mismatch causes the server-side SSL handshake to fail, resulting in users being unable to connect to the application.

This behavior is well documented in BIG-IP SSL troubleshooting guides: when backend servers expect HTTPS, a Server SSL profile is mandatory to establish a secure connection from BIG-IP to the pool members.

The other options are incorrect:

Removing the Client SSL profile (Option A) would break client-side HTTPS.

The server-side TCP profile (Option B) is unrelated to SSL encryption.

Forward Proxy (Option C) is only used for outbound SSL inspection scenarios.

Therefore, configuring an SSL Profile (Server) is the correct and required solution.

NEW QUESTION # 55

A custom HTTP monitor is failing to a pool member 10.10.3.75:8080 that serves up www.example.com. A ping works to the pool member address. The SEND string is: GET / HTTP/1.1 \r\nHost: www.example.com\r\nConnection: Close\r\n\r\n. Which CLI tool syntax will show whether the web server returns the correct HTTP response?

- A. tracepath 10.10.3.75 8080 GET /index
- **B. curl --header 'Host: www.example.com' 'http://10.10.3.75:8080/'**
- C. curl http://10.10.3.75:8080/www.example.com/index.html
- D. tracepath http://www.example.com:80

Answer: B

Explanation:

To manually verify a health monitor's "Send String" from the BIG-IP command line, the curl utility is the preferred tool because it allows for custom header insertion.

Matching the Monitor String: The monitor string requires an HTTP/1.1 request which must include a "Host" header. Option A correctly uses the --header (or -H) flag to pass Host: www.example.com to the specific IP and port of the pool member.

Troubleshooting Logic: If curl --header 'Host: www.example.com' 'http://10.10.3.75:8080/' returns a "200 OK" but the BIG-IP monitor still shows "Down," the administrator should check if the Receive String in the monitor configuration matches the output provided by curl.

Invalid Syntax: Option D is incorrect because it tries to append the hostname to the URI path, which the web server will likely reject with a "404 Not Found". tracepath (Options B and C) is a path discovery tool similar to traceroute and cannot validate HTTP response content.

NEW QUESTION # 56

Which menu should you use on the BIG-IP Configuration Utility to generate a QKView support file? (Choose one answer)

- A. System > Archive
- B. System > Configuration
- C. System > Logs
- **D. System > Support**

Answer: D

Explanation:

AQKViewfile is the primary diagnostic support bundle used by F5 Support to troubleshoot BIG-IP system issues. It contains comprehensive system information, including running configuration, licensing details, module provisioning, hardware status, software versions, log files, statistics, and the output of numerous diagnostic commands. Generating a QKView is a standard and recommended first step when investigating performance problems, configuration issues, or when opening a support case with F5. In the BIG-IP Configuration Utility (GUI), the correct and supported location to generate a QKView is System > Support. This menu is specifically designed for support and troubleshooting operations. From this section, administrators can generate a QKView file, monitor its creation progress, download it locally, or upload it directly to F5 iHealth for automated analysis. This workflow is clearly documented in BIG-IP Administration and Support guides and aligns with F5 best practices.

NEW QUESTION # 57

.....

BIG-IP Administration Support and Troubleshooting Exam Questions save your study time and help you prepare in less duration. We have hundreds of most probable questions which have a chance to appear in the real BIG-IP Administration Support and Troubleshooting exam. The F5 F5CAB5 exam questions are affordable and 365 days free updated, and you can use them without any guidance. However, in case of any trouble, our support team is always available to sort out the problems. We will provide you with the information covered in the current test and incorporate materials that originate from F5 F5CAB5 Exam Dumps.
